STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Thursday, November 2.

Jutes were an unsteady feature during the week with a dull tendency but which was inclined to show some improvement. Sugar shares were weak, Teas lifeless while Government securities were dull 3½ per cent. paper quoting Rs. 82-4, 1960-70 Loan found some support at Rs. 98, 5 per cent. 1945-55 was dealt in at Rs. 113-15, 4 per cent. 1943 Loan Rs. 101-7, 5 per cent. 1940-43 Rs. 105-8, 6½ per cent. Treasury Bonds (1935) Rs. 106-12 and the 4 per cent. New Punjab Bonds (1948) Rs. 99-2.

Jute—A better feeling prevailed in this section Howrahs improving to Rs. 48, Kamarhattys to Rs. 450. Belevederes were wanted at Rs. 290, Budge-Budge changed hands at Rs. 291-8, Standards were dealt in at Rs. 298, Kanknarrahs Rs. 398-8, Anglo-Indias Rs. 320, Bally Rs. 122, Empire was dealt in at Rs. 32-8, Clives quoted Rs. 24-4, Nationals Rs. 20-14, Craig As. 14 and Presidency Rs. 5-2, the tone, however, was quiet with not much buying enquiry.

Coal.—A few deals was reported in these shares, Burrakurs having buyers at Rs. 14, Raneegunge were steady at Rs. 40-10, South Karanpuras had buyers at Rs. 5, Bengals changed hands at Rs. 237, Standards quoted Rs. 23-12, Burra-Dhemo Rs. 4-1, Churulias were taken at Rs. 1-14, Mintos quoted Rs. 4-6 and Talchers Rs. 2. On the whole, the section remained steady.

Cotton.—These shares were dull, Keshorams quoting Rs. 3-5, Dhakeswari Cotton Rs. 11-4, New Victoria (Ordy.) Rs. 1-10, and Dunbars Rs. 103.

Tea.—This section was uninteresting Kurseong and Darjeeling reported a solitary deal at Rs. 22-8, Betjans quoted Rs. 26, New Terai, a small lot was done in Moheemas at Rs. 14-4, Hantaparas Rs. 480, Dimakusi Rs. 26-12, Gohpurs Rs. 7-12 and Rajnagars Rs. 4-4.

Banks and Railways.—Bank shares showed no change Imperials fully paids quoted Rs. 1,220-8 and the Contributories Rs. 303, Allahabads Rs. 327 and Rs. 160, Centrals Rs. 23-8, Eastern Bank Rs. 65 and the Bank of India Rs. 103-8. In Railway shares Howrah-Amta Light Railway quoted Rs. 91, Shahadara-Delhi Rs. 119, Mayurbhang Rs. 61-8, Arrah-Sasaram Rs. 66, Darjeeling-Himalayan Rs. 71 and Burdwan-Cutwa Rs. 74.

Miscellaneous.—This section disclosed no special feature. Bengal Telephone had buyers at Rs. 17, U. P. Electrics were dealt in at Rs. 128, Bareilly were placed at Rs. 11-8, Benares Electric Rs. 12-4 and Daccas Rs. 10-8, Indian Wood Products were quiet at Rs. 30-8, Bengal Timber Trading reported a deal at Rs. 140, Indian Standard Wagon were quiet at Rs. 46, Burma Corporation came to business at Rs. 8-12, Indian Iron and Steel quoted Rs. 4-3, Marshall & Sons As. 15, Macfarlane & Co., Rs. 1-4, Spence's Hotei Rs. 1-10, Walford Transport As. 14, Midnapore Zemindary Rs. 61-8, Bengal Timber Trading Rs. 141, Calcutta Landing and Shipping Rs. 7-2 while in Sugar shares Rohtas quoted Rs. 8-10, Cawnpores Rs. 31-4, Champarans Rs. 22, Belapurs Rs. 10-12 and Basti Rs. 204.

MADRAS STOCK EXCHANGE.

(*By Wire.*)

(From Our Correspondent).

Madras, November 2.

The giltedge market was again unsettled. Paper gradually came down on selling pressure both from Bombay and Calcutta. After touching Rs. 81-11 the market improved to Rs. 82-6 but the tendency was uncertain. Both 4 per cent. 1960-70 and 5 per cent. 1945-55 Loan registered selling a pressure closing at Rs. 98 and Rs. 113-12 respectively. In the absence of enquiry for short-dated and medium-dated loans, prices fell away rapidly especially for 5 per cent. 1939-44 at Rs. 105-12, 5 per cent. 1940-42 at Rs. 105-8 and 5½ per cent. 1938-40 at Rs. 107-5 whilst 3½ per cent. 1947-50 recorded a sharp fall, to 92-4. Mysore loans were popular; 5½ per cent. Mysore 1938 bonds were done at Rs. 109-10 on Bombay account whilst 6½ per cent. noted dealings at 115-7. The undertone is uncertain in debentures. Madras Corporation 5 per cent. 1945 changed hands at Rs. 105-12 whilst there were sellers of 4 per cent. 1944 at *par* in Joint Stock Company Issues. Coimbatore Spinning and weaving debentures were taken at Rs. 195 and Singareni Collieries Debentures at Rs. 101-8. Amongst Preference shares Spencer and Company Limited "A" Preference shares were done at Rs. 9-10 and Vasanta Mills Preference at Rs. 108-8 Cum Dividend. Tata Iron and Steel Second Preference Shares were dull at Rs. 99-8. With negligible business Bank Shares were steadier with the exception of State Aided Bank of Travancore which weakened to Rs. 18 with sellers over Imperial Banks noted no transactions whilst Indian Banks Big were wanted at Rs. 91. With no sellers small shares were absorbed at Rs. 19. With further buyers out Cotton Mill Shares were more active; Bangalores were taken up at Rs. 82. Buckinghams at Rs. 176-8. Gokaks at Rs. 110 and Madras United Spinning and Weavings at Rs. 69-12. Most Shares closed a shade easier. Cements and sugars were quieter; Deccans were freely offered at Rs. 265 without interesting Buyers small shares were done at Rs. 63 with sellers over Belapurs were quoted at Rs. 190. The Planting section was lively; Cochin Malabars were absorbed in quantities at one rupee with buyers over at the same price; Kalutura Rubbers were transacted at Rs. 6-4. Periyars noted dealings at Rs. 4-12. With more buyers in evidence Peermades were done at Rs. 20-8. Periakaramalais at Rs. 31-8. And Vellamalais at Rs. 8-12 whilst Devasholas changed hand at Rs. 6. Nilgiri Neergundis were a weak feature with sellers at 8 as. In the miscellaneous section, there was no special feature. The market closed dull and apathetic.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From our Correspondent.)

Bombay, Nov. 3.

Giltedged securities developed an easy tendency, but later steadied. Government 3½ per cent. Rupee paper which closed at Rs. 82-10 on Thursday last opened firm at Rs. 82-14 on Friday owing to higher London advices, but declined to Rs. 82-11 under aggressive selling on Tuesday. However the rate again revived today and after touching Rs. 82-9 closed at Rs. 82-6.

In the share market, forward section continued to remain closed. On Saturday the General Extraordinary meeting of Members of the Stock Exchange approved the scheme for Moorat settlement with only three dissentients, authorising the Directors to invest three lakhs rupees in shares of the Currimbhoy group. It is understood that forward business will be resumed in shares other than those of Currimbhoy group shortly after settlement day which comes off on November 13. Business in cash scrips was very dull and hence fluctuations were quite meagre. On Monday the tendency was slightly easier, but otherwise a steady tone prevailed.

Imperial Bank full-paids came up from Rs. 1,215 to Rs. 1,225 but other bank shares were trifle lower.

Luxmi and Vishnu Mills improved from Rs. 740 and Rs. 1,450 respectively to Rs. 785 and Rs. 1,470. Tata Steel Second Preferences came up from Rs. 99-8 to Rs. 101 and again declined to Rs. 99-12. Most of the remaining scrips either remained unchanged or a bit lower.

JUTE AND JUTE GOODS

JUTE

Since reporting last week the jute market has remained featureless without any appreciable change in values. Values have ruled a shade easier but the undertone of the market is firm. Business in ready firsts have been done at Rs. 24-8. Mills have bought small supervised European Jat on Rs. 4-4 and Rs. 3-12 basis. Sellers have been plentiful without finding equally eager buyers.

Recent changes introduced in the East India Jute Association regarding the conditions of delivery have reduced the number of interest earnes operating in the association. But money being far too cheap genuine interest earners have gone into the moffusil and comparatively heavy purchases of jute have been recently made. These stockists mean to carry very long. In spite of this new buying element arrivals are pretty large and the market is ruling easy under simple selling pressure. In the futures market too, the existing prices of jute being considered very low long bulls are carrying fairly large quantities, but so far no trade support is forthcoming. The technical position of the market is such that it will act both ways. In case a rise immediately sets in the holders will surely push it further. On the contrary if the arrivals of jute continue a the present rate the long interest both futures and spot being pretty heavy the sheer liquidation will accentuate the fall. There is only one favourable point for the bulls and that is the comparatively low rates of jute. Sound opinion seems to be in favour of a rise during early spring and not earlier.

The arrivals up to the end of October are in the near hood of 25 lakhs bales. While stocks in Calcutta are over 5 lakhs maunds, that is larger than the previous year. The goods market is dull with exception of hessians which is at a fair premium due to paucity of stocks. Heavy goods are very cheap and they do not promise any rise in near future.

JUTE MANUFACTURES

During the week the market after ruling weak has ruled steadier towards the close. Earlier the gold purchasing policy maugurated by President Roosevelt had some bullish feeling. But the Wall street or European markets did not respond in a ready manner. Consequently the enthusiasm was soon damped. The success of the gold purchasing scheme is looked upon with doubt and the market having suffered more than once by similar 'stunts' as it calls them, have become weary of taking any serious notice. The general opinion has been that manipulating exchanges means putting one country in a favourable position against the other. Therefore there is no real remedy. The depression has been a world-wide trouble and not confined to any one particular country. The real remedy therefore is not to raise price level by artificial means but by the actual consuming power of every individual being increased whether he belongs to this country or that. Trade therefore now means to fallow the actual demand and not precede it in anticipation of a rise as they did in the course of last few years.

Heavy goods market has ruled very weak without getting good buyers. Hessians specially the ready 8 oz. has ruled very firm in the course of last two days. This has been due to smallness of stocks and large scale purchases by a bull operator.

The difference between November and February futures has come to stand at eight annas per hundred yard. The general tone of the market is not for a fresh rise.

The total reported sales for the week ending Saturday the 28th October, 1933.

25 YEARS TEST

REVEALS THE BEST

Service: For over 25 years "The Indian Mercantile" has served the Indian Public with complete satisfaction.

"Dependable" is no exaggerated description of this indigenous concern which has at the time Assets exceeding three times its paid-up capital and has paid, with rare exceptions, handsome Dividends since its inception.

Life policies issued by this Company are scientific, up-to-date and designed to meet individual requirements at competitive rates of premium.

Agency Terms are unique and treatment sympathetic.

THE INDIAN MERCANTILE INSURANCE CO., LTD.,

11, Bank Street, Fort, Bombay.

COTTON AND COTTON GOODS

COTTON.

During the current week the market has ruled dull and featureless without much business passing. New York as well as Indian markets are not very enthusiastic over President Roosevelts gold purchasing policy. Consequently in spite of the bullish feeling there has been no nett gain in values.

The Indo-Japanese settlement is still not concluded and the boycott of Indian Cotton therefore continues as usual. Crop in the interior has already begun to move and hedges are therefore inevitable. Indian consumption of Indian Cotton is already at a decline due to closure of various mills and the reduction in import duty of Japanese and British piecegoods will curtail it further. According to the second All-India Cotton Crop forecast the area this year is 7 per cent. larger than last year. The American Crop also is estimated at 13.4 million bales against 12 millions the original estimate. All these factors when taken into consideration do not warrant any appreciable rise in the near future. Bulls have considerably lost during the past three years and consequently they have lost faith in a bull sentiment.

PIECEGOODS

Comparatively active conditions have prevailed in the piecegoods market during the week. Indo-Japanese talk are getting closer to a settlement, and the nervousness caused by Currimbhoy trouble is also over.

Increasing business is being done in Lancashire goods. Japanese business being confined to spot sales. Demand for indigenous goods is poor. The report that import duties on British goods is also going to be reduced has caused nervousness and the dealer thinks that before the Japanese dumping was over British dumping will now take place. These holding large stocks of Indian piecegoods have become very nervous in view of the fact that price Lancashire as well as Japanese piecegoods will soon see a big reduction, thus naturally forcing the holder to part with his goods at the new parity. Since the British delegation came over here doubts were entertained about the reduction in the imports duty on British piecegoods. But everybody seems to be asking, why? For whose benefit this reduction? Indian mills are sure to loose—in the bargain. Not only that, but even the handloom industry will be very much adversely affected. In case of Japan, the duty is far too high when compared with the duty on British goods. Besides there has been a bargaining about sliding duties according to the movement in Rupee-yen exchange. Japan is to agree to take up 1.5 million bales of Cotton, while there is no such undertaking in case of England. There is only a vague recommendation for using more Indian Cotton by British mills. The linking of rupee to sterling at a high level is already a bounty to British manufacturer. Still the import duty is to be reduced. One doubts if entertaining the Japanese delegation was only a pretext to lower import duty on British piecegoods. The way in which the chief of the Bombay Millowners Association has been acting is looked upon with great suspicion by the laymen in the trade.

The agreement reached provides :—

As regards cotton piecegoods, it is agreed that when the surcharge on all imports imposed in October, 1931, is removed, the Indian side will not make fresh proposals with regard to the duties applicable to United Kingdom imports.

In the matter of cotton yarns, the Indian side has agreed that the duty on imports from the United Kingdom may be five per cent. **ad valorem** with a minimum specific duty of an anna and a quarter per lb.

The duty on artificial silk piecegoods is agreed upon as follows :—

30 per cent **ad valorem** or 2½ annas per square yard for hundred per cent. artificial silk fabrics, and 30 per cent. or two annas per square yard for mixture fabrics of cotton and artificial silk.

BULLION

GOLD

Golds after ruling weak during the previous week the gold market has during the current week ruled steadier and values are once again higher—Ready mint in Bombay has advanced to Rs. 32-13. First and second settlements are quoted half to one anna per tola over the ready respectively. London Paris cross rate is near 81 the latest available quotation are 80.84. London gold has advanced from Sh. 129 2/3 to Sh. 131 13/4 per oz. The rise has been mainly due to the announcement made by President Roosevelt firstly to buy gold produced in U. S. A. States and later on the purchases being extended in continental markets. It is reported that the first American purchase of gold was made in London on Nov. 1. The New York price of gold is 30.12 dollars an ounce on Oct. 31st. The American purchase price of gold will be changed from day to day, the changes to be made in accordance with the fluctuations in dollar exchange.

The policy of gold purchase is not universally favoured by the American Press nor by the Economists in general. While it has certainly created an alarming situation in countries still on gold, and it is anticipated that France and Holland will go off the gold standard as an embargo on the export of gold will be soon placed. How this gold purchasing policy will ultimately affect the American trade and industry it is very difficult to say at the moment, but it has certainly created an unfavourable impression towards America in most of the European countries.

Judging from the market view point, the new move of the President is construed as bullish. But in the course of last few years so many experiments to revive trade and to raise prices, have been tried, and almost all of them have more or less failed in the sense that they had had no lasting effect. Therefore the bulls in particular, and holders of goods in general have more than once burnt their fingers very badly by making purchases at the inauguration of each of these new price raising devices. Consequently, both the speculator as well as the trader are very slow to act on such news. It is for this reason that in spite of a bullish undertone there has been no perceptible rise in the values of commodities.

Stocks in Bombay remain unchanged and daily off take is poor. Distress gold is flowing in large quantities to port towns for sale and is being readily absorbed.

LONDON (Air-Mail Week.)

Gold reserve against notes of the Bank of England was £190,377,299 on the 11th October comparing with £190,376,131 the figure for the previous Wednesday.

In the open market the supply was substantial and was taken by the Continental buyers.

The daily quotations showed wide fluctuations due to the erratic echange movements.

The following were the United Kingdom imports and exports of gold registered from mid-day on the 9th instant to mid-day on the 16th instant :—

Imports	£
Belgium	8,629
France	42,586
Iraq	14,401
U. S. A.	517,362
Uruguay	167,900
British India	961,536

SILVER

Silver.—The market during the week under review has ruled steady with a small advance in prices. Kartik settlement is quoted at Rs. 56-14. The strength has been due to President Roosevelt's announcement, and partly due to holdings of a big Bombay merchant who supports the market at every decline. Senator Pitmans joy over the Presidents gold purchase policy and that the former will introduce a bill for the free coinage of silver in America at 16 to 1 ratio had also a strengthening effect on the market. Though the general feeling has been that there is little chance of Senator Pitman's hopes being realised.

Stocks in Bombay and Calcutta are at about 10,000 bars, while the daily offtake is about 7 bars. Shanghai Dollar has remained near 1/3, 3/8, London price 18 1/4d. and New York 39 5/8 cents.

E. I. D. Branch, 3 & 4, HARE STREET, CALCUTTA.

The Manager Head Office.

SILVER

LONDON (Air Mail Week)

A weaker tendency developed in the market and prices showed steady decline quoting 18⅜d. for cash and 17 13/16d. for two months delivery on the 17th October, a fall of ⅜d. from the previous day's quotation. China bought to some extent and covering purchases were made for Indian Bazaars. But on the whole the support was poor and could not meet the offerings from the Continent and America. New York silver in common with the general decline in commodity prices also showed a decline and hence this quarter sold heavily during the week.

China exchanges did not follow the fall on the 17th and on the 18th demand from China influenced prices to recover by 5/16d.

The following were the United Kingdom imports and exports of silver registered from midday on the 9th instant to midday on the 16th instant:—

Imports	£
Germany	13,253
Japan	2,700

TEA

Sale No. 20 was held on 30th and 31st October, 1933, when 20,000 packages of tea for export, 9,000 packages for internal consumption and 3,400 packages of dust were sold at annas 3-11, 4-1 and 4-10 per lb. respectively.

Demand was like the previous week, values for export tea being a shade easier. Good types of Orange Pekoe were however dearer. Leaf of internal consumption was in fair demand, values were well maintained. Dusts had a strong market.

The following are the full particulars of sale No. 20.

Teas with Export Rights

	1933.	1932.	1931.

INDIAN TEA SALES

At the London auctions on October 30, 26,300 packages of Indian tea were submitted for sale.

There was a good demand with little change in prices which were generally firm.

The following were the lowest prices during the day's auction:—

Common Pekoe last auction 10¾d., to-day's auction 10¾d. lb.; Common Broken Pekoe last auction 10¾d., to-day's auction 10¾d. lb.; Common Orange Pekoe last auction 11d., to-day's auction 11¼d. lb.; Common Broken Orange Pekoe last auction 11¼d., to-day's auction 11d. lb; Common Broken Pekoe Souchong last auction 10¾d., to-day's auction 10¾d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 10⅞d., to-day's auction 10⅞d. lb.; Clean Common Broken Pekoe last auction 10⅞d., to-day's auction 11d. lb.; Clean Common Orange Pekoe last auction 11¼d., to-day's auction 11⅛d. lb.; Clean Common Broken Orange Pekoe last auction 11⅛d. to-day's auction 11⅛d. lb.; Clean Common Broken Pekoe Souchong last auction 10¾d., to-day's auction 10¾d. lb.

CEYLON TEA SALES

At the London auctions on October 31, 22,000 packages of Ceylon tea were submitted for sale.

Low medium and common qualities met with good competition at generally firm rates.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 11¼d., to-day's auction 11¼d. lb; Common Broken Pekoe last auction 11⅛d., to-day's auction 11⅛d. lb.; Common Orange Pekoe last auction 13d., to-day's auction 13½d. lb.; Common Broken Orange Pekoe last auction 12½d. to-day's auction 12½d. lb.

The followwing are the value prices:—

Clean Common Pekoe last auction 11⅝d., to-day's auction 11⅝d. lb.; Clean Common Broken Pekoe last auction 12d., to-day's auction 12d. lb.; Clean Common Orange Pekoe last auction 13⅜d. to-day's auction 13⅜d. lb.; Clean Common Broken Orange Pekoe last auction 12⅝d., to-day's auction 12⅝d. lb.

GRAINS AND SEEDS

WHEAT

During the week under review the market has ruled very steady with a decent rise in the values, spot as well as forward. The rise was partly due to better advices from U. S. A. grain markets and partly due to unfavourable weather in the wheat growing districts in India. There have been very late and heavy rains in U. P. and Punjab during the last month, resulting in late sowings in some districts and also causing damage by flood in the actual storage. This followed by better American reports have made the bears cover and the bulls making fresh purchases. The opinion however seems to be against a further rise. New sowing prospects are becoming brighter. The wheat values are comparatively for too above the other grains parity. It is therefore not advisable to hold long May Beta for a further rise. The highest and lowest of the week for Beta May were Rs. 3-3 and Rs. 3 per maund.

LINSEED

There has been a short rise of about eight annas per maund in the price of linseed in the couse of last two weeks. The rise has been to in sympathy with the rise in U. S. A. caused by the manguration of new currency policy by President Roosevent. The weather conditions in Argenitina are reported to be unsatisfactory and the rise for this reason has been accentuated. The trend of the market is however very uncertain, the American currency policy having not received the reception at once appeared to have.

ARGENTINE LINSEED CROP

According to a cable, dated the 18th October, 1933, received from the International Institute of Agriculture, Rome, the area sown with linseed crop in Argentina is now estimated at 7,166,000 acres, as compared with 7,401,000 acres last year. The condition of the crop is reported to be good.

SECOND GROUNDNUT CROP FORECAST 1933-34.

According to the All-India Second Ground Nut Crop Forecast 1933-34 recently published, the total area sown in the Bombay, Madras, Burma, and Mysore—tracts is estimated at 5,670,000 acres, as against 5,000,000 acres reported at the corresponding time last year. Excluding the area for the Mysore State, which is not available for last year, the present estimate shows an increase of 9 per cent.

Weather conditions have not been quite favourable, but the present condition and prospects of the crop are reported to be fairly good.

Details for the provinces and the Mysore State are as follows :—

Provinces and States	1933-34. (1,000 acres)	1932-33. (1,000 acres)	Increase (+) or Decrease (−) (1,000 acres)
Madras ...	3,211	2,986	+225

COTTON

By Wire

(From Our Correspondant)

Bombay, Nov. 3.

American cotton prices moved within narrow limits as speculative enterprise was restricted owing to uncertainty regarding the monetary policy and rumours about Federal regulation of stock and commodity markets. Hopes of inflation and latterly rumours about impending bullish announcement on silver induced trade buying which is the principal support for the market. With the local scheme making favourable progress hedge selling has been decreasing. Nevertheless increase estimates of crop has been prompting considerable liquidation to the detriment of prices. American cloth and yarn ruled dull but Manchester reports showed improvement. New York January fluctuated from 9.81 to 9.47 closing at 9.61 on Wednesday and Liverpool January moved between 5.41 and 5.24 closing at 5.26 yesterday. Local Broach rate from its previous close of Rs. 189 touched highest and lowest at Rs. 192-12 and Rs. 188-12 and was finally quoted to-day at Rs. 189-12 with Oomra and Bengal Dec.-Jan. closing at Rs. 165-8 and Rs. 141-12 respectively.

GOLD

(By Wire)

(From our correspondent)

Bombay, Nov. 3.

With the new move of President Roosevelt extending gold purchasing operations to world markets outside states, the trend for gold prices has become decidedly upward. Though already authorized operations are to commence from to-day. Hence local rate for gold has risen sharply to Rs. 33-2-6 to-day at 6 p.m., the rate last quoted on Thursday October 26 being Rs. 32-11-3.

SILVER

(By Wire)

(From Our Correspondent)

Bombay, Nov. 3.

Silver rates ruled dull in the beginning rate for November being quoted on last Thursday and Friday at Rs. 56-4-6. But since the launching of the gold policy by the United States of America, it is being hoped that silver's turn will be coming and from yesterday there is strong rumour that President Roosevelt will soon announce a silver purchasing scheme. Hence the rate for November gradually advanced culminating to-day at Rs. 56-15.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

AMERICA'S GOLD PURCHASE

Rarely has there been a week so full of bewildering developments. Living in the moment one feels tempted to suggest that the week might well prove the turning point in the history of international finance. Some of the most crucial problems have been dealt with by the appropriate authorities, not certainly with the confidence of arriving at a decision, but with a definite possibility of changing the humdrum course of affairs during recent times. Before going on to the more perplexing puzzles, a reference might, perhaps, be made to the war debt discussions in Washington. It was pointed out in our overseas columns last week, that the interview between Mr. Acheson and Mr. Roosevelt suggested the possibility that the British representatives had succeeded in making proposals which necessitated the personal intervention of the American President himself. Subsequent developments have tended to strengthen that suspicion. There have been, as this week's Air Mail papers show, more than one conference between the President and his Under-Secretary of State. The reports that the war debt discussions have not been making any progress and that they have been left practically in abeyance have been contradicted by Sir Frederick Leith-Ross. Some sections of the American press are positive that the British Government was prepared to offer 25 per cent. and that the American Government would not accept anything less than 75 per cent. and that it remained to be seen how far the British would help to bridge the gulf. Later messages tend to suggest that the attempt at reaching a final settlement of war debts has been more or less abandoned and that the negotiating parties are now intent on arriving at an understanding as to how the December payments are to be tided over. So far as the British Government are concerned, they have always been ready to continue the precedent of June 15, namely, a token payment indicative as much of the determination not to resume payments under the old settlement as of the readiness to honour the reasonable claims of America in this regard. As for France, no one needs to be told that the recent ministerial changes make little difference to the French attitude to war debts. In fact, the new Government have reiterated their opposition to any manner of payment.

* * *

While in respect of war debts the week has seen no definite development either way, it has seen President Roosevelt take a big step forward in clearing up the future of his monetary policy. The mystery surrounding his future plans is not yet totally dispelled. But the world has had an inkling of his ideas in his decision to fix price at which, he would effect purchases of gold abroad on behalf of the American Government. It was learned on October 29 that President Roosevelt has actually authorised the purchase of gold from abroad and that the announcement authorising such purchase followed a meeting between President Roosevelt and his financial advisers and that the immediate purchases were expected to be made through the Reconstruction Finance Corporation. And since then we had seen a daily announcement of America's official price of gold for purchase abroad, which has been duly incorporated in the table at the head of this article.

* * *

About the significance of this measure to American economy and international finance, opinions necessarily differ. We still hold to our view that through a gradual rise in the official price of gold, the value of the dollar will be gradually deflated, leading ultimately to the point at which it may be stabilised in relation to foreign currencies and gold, without any adverse significance to the economic plan pursued by Mr. Roosevelt at home. We believe also that the transitional stages implied in such a policy will be used to the best advantage to explore the chances of coming to an agreement with Great Britain and France or at least to clarify the bases on which the three principal nations could act without any pronounced conflict between their immediate aims.

* * *

Such a view has been amply confirmed by the report that the United States Administration has exerted itself in seeking an understanding with Great Britain and that negotiations have taken place in Washington with Sir Frederick Leith-Ross, the British Treasury Expert, and members of the Federal Reserve Board and the United States Treasury. It has even been ventured that these negotiations have resulted in a tentative agreement providing for the pegging of the exchange value of the pound and dollar in relation to each other and that the object of this currency truce is to enable President Roosevelt to pursue his gold purchase scheme without causing upsets in British trade. Though this statement, which emanated from the *Chicago Tribune*, was made on October 31, there is no sign of any immediate effect having been given to this supposed truce. It would, no doubt, be a welcome development if Mr. Roosevelt's decision to purchase gold abroad were to lead to an understanding, however temporary and tentative, between Great Britain and America as regards the dollar-sterling exchange. But to determine how far such a truce is possible, it is necessary, first of all, to probe into the real object of President Roosevelt's decision to purchase gold abroad. At the time the announcement was first made, the terms of the declaration conveyed the impression that America's dealings in gold abroad were meant more to eliminate foreign influences on the exchange value of the dollar than to increase the gold holdings of the United States. Though it may not be questioned that America would like to replenish her stocks of gold, it is doubtful if the necessity is so urgent or imperative. Besides, it is doubtful if American credits abroad are sufficiently big to enable large purchases of gold. The volume of American credits abroad may now be supposed to be too small to enable large purchases of gold, but big enough for the purpose which, we suppose, has actuated Mr. Roosevelt.

* * *

The really important point to-day is not the specific action of this or that government, but the exact state of the new warfare of financial diplomacy. We have heard it suggested that after tiresome waiting for the American Government to show signs of coming to an understanding, Britain has at last made up her mind to plough a lonely furrough in the field of stabilisation and attempt thereafter to force the hands of America. This means that, while Britain is not prepared at no any time to waste an opportunity of conference and negotiation with America, she has made up her mind on the moot problem of recent years, whether, in the event of the dollar going further down, sterling would follow it or revive the stable *de facto* link with the franc. During the first half of October there is clear evidence that the official policy of Great Britain has been to check the depreciation of sterling in terms of the franc. The "control" had been active checking the decline of the

franc on more than one occasion and especially during the time when, owing to the news of Germany's withdrawal from the Disarmament Conference and the League of Nations, there was a widespread tendency to sell francs and buy dollars.

* * *

Can we conclude from this that there has been a hardening of opinion in favour of stabilisation in England? There can be no doubt that British financial opinion is normally disposed to favour the stabilisation of sterling. In the months following the abandonment of the gold standard in England, the general apprehensions against the repetition of a similar debacle clouded the thoughts and judgment of many who were competent to pronounce on this matter. When by the middle of 1932, it was clear to all that the events of September, 1931 were far from being an irretrievable tragedy to the nation, the general sense of elation was also mingled with the feeling that the advantageous position of Britain was due in no small measure to the depreciation of the exchange and that this advantage should not be foregone for any petty advantage or in consideration of a mockish sentiment regarding the stability of international finance. There was also the feeling that, because Britain had been enabled by the devaluation of sterling to improve the position of her national trade and finance, she was in a position to dictate to the rest of the nations the terms on which alone she would consent to return to the gold standard. Now it is generally agreed, as well as in England as elsewhere, that a better attitude on the part of Great Britain at that time could have helped to solve not only her own difficulties, but also the difficulties of world economy altogether and that the history of the World Economic Conference would have been different, if the Preparatory Committee were not faced in the Autumn of 1932 with the stiff demands of the British delegation. Whatever that might be, it is certain that in the last quarter of 1932 and the first quarter of 1933 the bargaining advantages which Britian possessed formerly were lost nearly fully. On the other hand, Britain was placed in a very difficult position, in between the two extremes of stotidly deflationary France and riotously inflationary America. The World Economic Conference fully divulged the anomalies of this position ; and since then, with Roosevelt swearing by the principles of his recovery programme, the British financial authorities have been on the horns of a dilemma. The Government had to take account of the general unpopularity of the efforts of the Bank of England and the Exchange Equalisation Fund to maintain a *de facto* stability with the franc. When, therefore, the seasonal depreciation occurred, practical considerations as well as the haziness of the general conceptions of financial policy required that sterling should temporarily be allowed to find its own level. Now that, as we have pointed out at the beginning, the "control" is again exerting itself in favour of preventing too rapid changes in the sterling-franc rate, it may be said that British opinion is veering round in favour of a stable link between sterling and franc.

* * *

How are we to set the report of an agreement between Britain and America regarding the pegging of the sterling-dollar rate in the historical background depicted in the previous paragraph? A way of escape is afforded in the hints thrown in in the newspaper reports that the American administration has been attempting to come to an understanding with the Bank of France also. If this is true, then the prospect of a real currency agreement between the three important nations of the world is better now than it has ever been during the last two years. This is not to say that the difficulties in the way of such an understanding are less. All that it can imply is that there is a better yearning for such an agreement. It would still remain for Great Britain to acquiesce in the degree of inflation which Mr. Roosevelt would consider to be indispensable for the success of his recovery programme.

THE RATIO

The prospects of currency truce and stabilisation agreement between Britain and America invest the activities of the Currency League in this country with a new importance. Even in the absence of such reports, it was necessary for India to demand a reconsideration of her monetary and exchange problems. There is, in the first place, the proposal to establish a Reserve Bank of India; and it is essential, if the public is to have any idea of the prospects of its successful working, that we should know what is the currency policy which will be left in charge of the Reserve Bank. If the main function of a central banking institution is to take care of the internal and external value of the national currency, then it is the most elementary condition, precedent to the establishment of a Reserve Bank, that we should clarify our objectives in the field of currency and credit. But for reasons, which are not difficult to divine, the Government and the sponsors of the Reserve Bank Bill have chosen to leave these vital questions in suspense and to press forward with the purely political aspect of the Reserve Bank, namely, its constitution and the apportionment of power therein. Happily, the country has become alive to the importance of the question of monetary policy to the useful inauguration of a central banking institution in this country.

* * *

There are, however, other reasons which warn us against any further delay in adjudging the questions of currency. There is the *prima facie* consideration that our currency history is only a bundle of improvisations and rough and ready expedients, rather than an evolutionary growth or a well-planned system. From the abandonment of the free coinage of silver in 1893 to the linking of the rupee to unstable sterling in 1931, it has been a series of makeshifts. And not on one occasion has the country had the choice to determine the next step in full consideration of the national interests. It is futile to go over the whole ground of currency history again. The repeated denial of the gold standard in its ordinary and pure form, the dumping of token coins with silver bought at fabulous prices, the fixation of the ratio at impossible levels and successful retreats from one impossible position to another, these are now, happily, beyond dispute. That the economic life of the country has been carried on only under such monetary conditions is itself a strong argument for taking our firm stand in the present and threshing out all the questions connected with currency and making a circumspect choice of our future policy.

* * *

That is the broad background behind the present agitation carried on by the Currency League. Presented in this way, the demand for a change in the present ratio has an unquestionable *prima facie* case in its favour. In as much as the overvaluation of the rupee in the past points to the desirability of a reduction of the ratio and as this is also the specific demand of the Currency League, it may be asked whether any such action in the present predicament of international finance is not calculated to accentuate the chaos of international currencies and prejudice the chances of an agreement, with which the fortunes of India and world trade are inextricably bound up. For our part, we might readily confess that the recruitment of more competitors for the present race in currency depreciation is an unmixed evil to the world. While India has been engaged in devising measures to prevent the inflow of goods from countries like Japan with depreciated currencies, it would not be in keeping with our professions, if, before the end of the negotiations is known, there

should be a widespread demand for the reduction in the external value of the rupee.

* * *

The answer to such objection has, however, to be of an indirect kind. While, apparently, a change in the ratio must seem to be another instance of the increasing vogue of currency depreciation and may, therefore, smack of that gross type of economic nationalism which we all deprecate, it should be realised that such action on the part of India would alone help her to realise the one purpose of any scheme of concerted international action, namely, the raising of the level of prices. In this regard, India has in the past been seriously incapacitated for making any contribution. Ever since the two shilling ratio became what its advocates called the *defacto* rate, India has been on the path of dangerous deflation of currency. Till to-day we have not seen the end of that process of deflation. The only differences that have occurred are the difference between the positive deflation or contraction of the volume of currency, and the indirect deflation, consisting in the denial of the credit facilities commensurate with the growth of industrial and economic activity. So long have these processes of deflation continued, that it might almost be said that India was the first to start that process of strangulation of economic life through monetary stringency, which has landed the world in the present unprecedented and inextricable depression. If it is true that the interests of world economy require that no country should record a new entry into the race for currency depreciation, it should be admitted that India's unique misfortune of long-continued devaluation entitles her to be regarded as an exception to the rule.

* * *

A more practical line of argument seems also admissible in this case. The Indian might be excused if he asks whether the rules of the international game are meant only to cripple his own country. While the most powerful financial nations have had little compunction in abandoning the gold standard and effecting an almost daily reduction in the external value of their currencies, why should India alone feel bound to respect the susceptibilities of international finance? And, besides, there is an unquestionable conflict between the two aims of preserving exchange stability and helping in the rise of prices. And there can be no doubt that if these two objectives are incompatible, the latter is any day more valuable than the former. Apart from the question of whether a reduction in the exchange value would enable a nation to expand its foreign markets, there is the unquestionable immediate gain in reducing the burden of internal indebtedness. All authorities are agreed that the worst weight of an economic life to-day is the burden of indebtedness. While in the case of international commercial relations, the problem of indebtedness between one nation and another is complicated by the claims of creditors and debtors of different nationalities and the price of staples in foreign countries, within a national economy, inflation and devaluation of currency have the immediate effect of reducing the weight of indebtedness. With a disastrous fall in prices within so short a period as three years, there can be no question of injustice to debtors involved. And in the present plight of modern economy no country can afford to await the dubious chances of concerted international action for freeing the economic life from the weight of overgrown debts. It was precisely for reasons like these that Mr. Roosevelt decided with dramatic suddenness to abandon the gold standard and deflate the dollar. There is more need in India for a similar action than in any other country of the world. And to contend that the requirements of international order militate against any change in the rupee-sterling ratio is to display an ignorance of the main objects for which international co-operation is now sought.

* * *

We have thought it necessary to dwell on the international aspect as we are sure that, when the Finance Member, for instance, takes upon himself the duty of answering the demands of the Currency League, he would lay all the emphasis he can on the harm which India will be doing to international finance by effecting any reduction in the rupee ratio. We may now turn to the purely national aspect of a change in the value of the rupee. This has been dealt with at some length recently by Mr. Nalini Ranjan Sarker in his address to the Currency League at its meeting in Calcutta on October 31, last. In any examination of our future policy we have, in the first place, to clarify the implications of the link between the rupee and sterling. We were among the few organs of Indian opinion which supported the linking to sterling when it was effected in September,

1931. Of this, we need not say much at present beyond reiterating our view that during the period that has elapsed since that date, when international currency and exchange have been subject to serious turmoils, the link to sterling provided some kind of mooring for the rupee. We may also say that if, at that time, our choice lay between the link to sterling on the one hand, and on the other, chalking out our own exchange policy under the watchful guidance of a body of national experts, we would have chosen the latter. The fact that during the last two years more and more countries have felt drawn to sterling as a standard of tolerable instability is itself a sufficient defence of the views we urged at that time. But the fact remains that here, as in most matters concerning finance, we are denied the privilege of making a choice from a wide range of alternatives.

* * *

Now that it seems possible that before long Great Britain and the United States will come to an agreement about currency and exchange, it becomes more incumbent on India than at any time during the last two years to reconsider the question of the external value of the rupee. And if this question be viewed purely from the national standpoint, the circumstance that presses itself more on our attention is the disastrous decline in the value of our favourable balance of trade in merchandise. From Rs. 86.5 crores in 1928-29 it declined to Rs. 79.4 crores in 1929-30, to Rs. 62 crores in 1930-31, Rs. 34.8 crores in 1931-32 and ultimately to the negligible figure of Rs. 3.4 crores in 1932-33. This landslide in our foreign trade clearly suggests that there has been something radically wrong in our currency policy. It is not, as in the case of England, that we were exporting commodities which our usual customers have started making for themselves. For a great part of India's exports is made up of commodities, of which we have a real or virtual monopoly. Nor can the decline be attributed to the general shrinkage of values, consequent on the depression. For in that case, the foreign trade of other countries should show a similar, if not, an identical, decline; and when this is not the case, it is necessary that we should at least re-examine the bases on which the external value of the rupee has so far been fixed.

* * *

Despite serious differences of opinion in each country as to the exact ratio at which the external value of a national currency should be maintained, theoretically speaking, there is general agreement that the ideal rate of exchange is only such as would tend to keep the country's international balance of payments in a reasonable equilibrium. Judged by this standard, our present exchange rate has to be condemned without any hesitation. For during the last two years, India has had to draw a large part of her hoarded gold, a development which should be deemed highly disquieting, and even alarming, except on the hypothesis that India's gold hoards are really illimitable. It naturally suits the apologists of the present gold policy to assume the correctness of that hypothesis and to urge that India is putting her gold hoards to the only rational use imaginable and that there is no reason for alarm in the present outflow of gold. Only last week we had occasion to examine the question whether the gold exports are nearing their end; and our examination led us to answer the question in the affirmative. If, indeed, there is a limit to the the amount of gold available for export in payment of our foreign obligations—even if that limit were not so near as was supposed in our comments of last week—it is clear that a time will come when the present exchange rate will be as difficult of maintenance as its predecessors. Equally is it clear that the present rate cannot be maintained except with the assistance of a sustained flow of gold out of the country. No economist would have the temerity to contend that the exchange rate which necessitates for its maintenance an unceasing flow of the hoarded resources of the people is a natural rate. The case for the revision of the ratio is thus from every standpoint unanswerable.

A TEN-YEAR PLAN OF VILLAGE RECONSTRUCTION

The state of flux, caused by the collapse of the Civil Disobedience Movement, has not yet seen the end of plans and schemes for the political future of India. New parties are in the process of formation. Vigorous search for programmes is under way. The intensive political agitation since 1916, short spells of comparative inaction notwithstanding, has left the political imagination of the country barren, in the higher realms of central or provincial problems. In a way, this is all for the good. India is a land of about seven lakhs of villages, and some hundreds of towns. If India's progress were not to be lop-sided, reform should begin in the village. Till now, the political work of the country was, in the main, carried on by the lawyer. It suited him to give his attention to towns only. Villages were very much out of his way; the amenities of life there, very much lacking; and the audiences, quite innocent of English. But, the force of circumstances has led the politicals to court favour with the villagers for a variety of reasons. Incidentally, this new attitude will lead to the return of the educated, unemployed prodigal to his village home. No scheme of rural reconstruction can bear fruit without the educated youth, with his ideal of service and robust optimism, to work it.

* * *

It is of interest, therefore, to study the recent speech of Mr. S. Satyamurthy on "A Ten-Year Plan of Village Reconstruction." In the Ten-Year Plan which he suggests, "he would see that every village had good roads to lead to and out of it, had at least three tanks for irrigation, drinking and other purposes, a well-equipped elementary school forming the cultural centre of the village, and a dispensay within at least five miles of each village and a hospital within a reasonable distance. Any plan of village reconstruction should include a plan of free compulsory primary education." Of course, there is no dearth of critics, to ridicule the impossibility of the whole scheme. Objection has already been raised that the estimates for free compulsory primary education have been frequently made, and these run on to several crores. The cost for the supply of a dispensary for every five-mile radius was estimated to be such a huge sum, that the Government of Madras had to give up the idea. Regarding the water-supply and other items in the programme, the same line of argument was followed. Even the Rt. Hon. Srinivasa Sastri, who presided over the meeting, struck a pessimistic note, when he remarked that it was easy for anyone to say that you had to readjust taxation and expenditure; that few people realised how deep were the foundations upon which their financial system had been built; and that even a little change in their family budget would take some time.

* * *

It is a pity that the Rt. Hon. Sastri, with his wealth of experience of human life and institutions, should give way to despair. It is not proposed here to weigh each item of Mr. Satyamurthy's programme. Planned economy is no new thing for India, if the fact be recognised that, for social or economic purposes, the village has been the unit. The genius of India has evolved the institution of the village panchayat, which has been the wonder and admiration of the world. Invasion after invasion rode through India, leaving the structure of rural polity and economy undisturbed. Whatever the vicissitudes of the paramount government, rural economy continued its even tenor. Every Indian village had its tanks and channels in good repair; gave the so-

called free, but not compulsory, primary education ; and maintained its physician and barber-surgeon for ministering to one and all. It even supplied a free potter, a free blacksmith, a free carpenter, a free cobbler and a free priest. Those were the golden days of the Indian village.

* * *

The first fruit of the British domination was to disturb the ancient order, beyond all recognition. British statesmanship was short-sighted. Its avidity to centralise power clouded its ability to realise the impossibility of ministering to the welfare of the crores of people in lakhs of villages. But, the unkindest cut to the village was its loss of dignity. The village servants, such as the headman, accountant and the watchman, came, in course of time, to be looked upon as masters of the village, instead of the village itself through its panchayat.

The village, before the advent of the British, enjoyed the powers of decentralisation to the fullest extent. In fact, it enjoyed almost a sovereign status, barring the fact of its paying a tribute in kind to the central authority. The level of culture in the village was so even, that the selection of members for the panchayat was by lottery, as the discovery of the *Uttaramallur* inscription brought to light. This inscription describes the full proceedure. When the selection to the Panchayat was by lottery, it left no exacerbation of feelings behind it, as is often the case, among the candidates and their parties, in modern elections. In a small community like that of the village, party feuds should never be permitted. The one source of such feuds was wisely obviated by the resort, to the selection of panchayat members, by casting lots.

With this basic form of village government, the finances for village amenities were found in the village itself. Each village reserved some acres of common land and apportioned it among the barber, the washerman, the potter, the carpenter, the blacksmith, the physician, the schoolmaster, the priest, the watchman, the cobbler, the cowherd and such other village servants, for free service to villagers, irrespective of caste, colour or creed.

* * *

Rural reconstruction, to-day, is well-nigh impossible without the restoration of village autonomy in its completest form. The villagers have lost their sense of ownership in the village. They consider themselves as mere tenants, looking forward to the landlord, the Government, for every repair to village body-politic. But, they have not the power of the ordinary tenant to compel his landlord to do the necessary repairs. In the case of an ordinary landlord he has the fear of losing rent, or the deterioration of his property. But in the case of the Government as landlord, it has neither, both on account of its being foreign and not responsible to the popular will. The Government need have no compunction in the grant of the fullest measure of autonomy to the villages, as even the question of "law and order" is not involved in the bargain.

* * *

But, the villages would still labour under one disadvantage, that of finances. Formerly, the villages had to pay a minimum tribute to the Central Government. This method of revenue collection left scope for the villages to raise funds in cash or kind for the amelioration of rural conditions. Mr. Satyamurthy has done well to point out a small way when he said that "he would at once abolish all the District Boards which serve no useful purpose whatever and were now running inefficient schools and maintaining unserviceable roads." If the Boards were abolished, Mr. Satyamurthy said, and the present landcess of six pies, which went to these Boards, was given to the village panchayats, much of the financial difficulty, in the working of the reconstruction plan, would disappear. In some places, an education cess and a road cess are also levied. In deltaic villages of South India, twenty-one pies in the rupee are collected as cess. If these collections were also handed over to the respective villages, the working of the reconstruction plan will be further facilitated. The Government can also grant to the village panchayats some more power for levying rates, as well as imposing fines for petty offences. Mr. Satyamurthy will do well to publish a well-thought out scheme of rural reconstruction with facts and figures, which can serve as a basis for negotiations with the Government.

* * *

Mr. Satyamurthy's ten-year plan for rural reconstruction is not so fantastic as easy critics would deem it to be. As has already been pointed out, there is the psychological factor that will ensure success to the scheme. The restoration of the quasi-soverign status to the village will inspire fresh interest in the villager to keep his home in order, at any cost, and will attract, to his village home, the modern educated youth who lingers in towns, despite unemployment or under-employment, denying his services to his ignorant brethren in the villages. If the unemployed millions returned to their villages, they should, for the nonce, be glad to serve their villages for even a pittance, if only as an act of social service. Rural reconstruction will prove a Goliath, if the Government went about essaying it. But, if the natural leaders of the people tried it, with a Government willing to render all possible help, rural reconstruction is an assuredly splendid success. Now that the question of rural reconstruction has been made a plank in the political platform on the eve of an election, it is to be hoped that a committee of only non-officials will be appointed to go into the whole matter, in order to help the right amending of the Village Panchayat Act. Similar committees in all other provinces of India may be appointed, so that there may be an even progress throughout the country. It will be of interest, however, to watch what course the Government would adopt upon so harmless and yet so utilitarian a proposition, as Mr. Satyamurthy's ten-year plan of village reconstruction.

New Delhi, November 1.

Indo-Japanese Trade Negotiations—First attempt to face the issue—And consequent deadlock—Japanese side discloses cleavages—Government of India stands united & firm—Reserve Bank Bill—Bankers' Bungle-Schuster Tactics Tells—The Last Stand?

This week has seen a real deadlock in the Indo-Japanese negotiations. The reason is not far to seek. For the first time the two sides faced the real issue.

* * *

The Japanese wasted the first month of the negotiations in superficial examination of the case and in maintaining that all that was necessary was for India to give Japan unfettered right of entry into the Indian market on the basis of tariff duties imposed uniformly against all countries.

* * *

The Japanese knew that no negotiations could be conducted on such a basis by a Government which had already assumed anti-dumping powers chiefly against Japan. But their tactics, assisted partly by Sir Joseph Bhore's illness and partly by Trade Delegations talks, ate up a month of these negotiations.

It was not till they adjourned from Simla that they agreed to talk seriously on the basis of a trade agreement.

* * *

Delhi faced another set of difficulties. The Japanese, who had hitherto been standing together and speaking with one voice, were now represented as differing among themselves so that constant reference to Tokio was stated to be inevitable. And Tokio, on its side, held that it was handling a very delicate situation in trying to bring the millowners of Osaka round to the official point of view. Delay caused by these developments could not be grudged.

* * *

The Government, on its side, acted in a very businesslike manner. It consulted the non-official advisers only to the extent to which they had any light to throw on the subject of the negotiations. Once the advisers had had their say, the Gvernment of India told them that there was no use their staying longer.

* * *

The entire responsibility in regard to the negotiation was taken by the Government of India and they did not hesitate to act in their own best light.

* * *

For instance, though the Associated Chambers and the Federation of Indian Chambers of Commerce had unanimously recommended to Government against specific duties, the Government of India found that a plan of specific duties was calculated to give better results than duties advalorem, and so without further reference to non-official advisers the plan was adopted.

* * *

Already the case of every other industry except textiles is settled, and there should be no difficulty in having the Agreement adopted within the shortest time, if only the textile obstacle is removed. This obstacle is caused, not on the merits of the case, but because the Japanese feel that India is so anxious to sell her surplus raw cotton, which Japan alone can buy, that Japan has the upper hand in dictating terms regarding this matter.

* * *

Luckily, the Government of India has taken a firm and united stand against these tactics of the Japanese and have told His Excellency Mr. Sawada that the terms of the Government of India are final and that Japan can take them or leave them.

* * *

Every effort is still being made by Japan to higgle over the terms; but the Government of India Delegation is determined to stick to its terms. The result is that next week I should be able to report that the negotiations have ended, either way.

* * *

If the trade negotiations have been of a dilatory character no less have the Reserve Bank discussions been so. Sir George Schuster made his plans very carefully and had, as usual, worked on psychological factors.

* * *

Firstly, he allowed the Members of the Committee to have long debates so that they may exhaust themselves over the minor clauses; and all the rest that counts may be rushed at the last minute on the ground that there is not enough time to hold elaborate discussions before the Assembly meets on the 13th.

* * *

Secondly, he has arranged the Bankers' evidence in a manner that prevented the Bankers from coming out with their individual plans. The Bankers were all called in together, with the result that each felt less individual responsibility in the matter of expression of opinion. The Bankers particularly were unable to assert even the opinion on which they had felt the strongest, namely the question of compulsory deposits.

* * *

In a Conference when one Banker says that the clause did not affect his particular bank because it always held much larger balances, it made every other say the same in sheer defence of their own position. With the result that the opposition to the clause on principle lost all its weight.

* * *

And what is more, the Bankers made a tactical mistake in offering a compromise with regard to these deposits. Where they should have left the Government to put forward a compromise, they made the offer themselves and left it to Government to criticise it.

* * *

The Bankers who came up thus proved helpless in asserting the point of view which they had brought up and left Sir George Schuster the master of the situation.

* * *

However the non-official members of the Committee are expected to put up some fight, if they are given a chance. The number of those who stand for a State Bank is increasing and they are at any rate, convinced, that there must be a clause providing for the purchase of the shares of the Bank by the State at the end of a given period.

* * *

There is now unanimity of opinion among the non-official members that the matter is being rushed and that the country should have an opportunity to examine the Bill more carefully.

"HILL-BIRD".

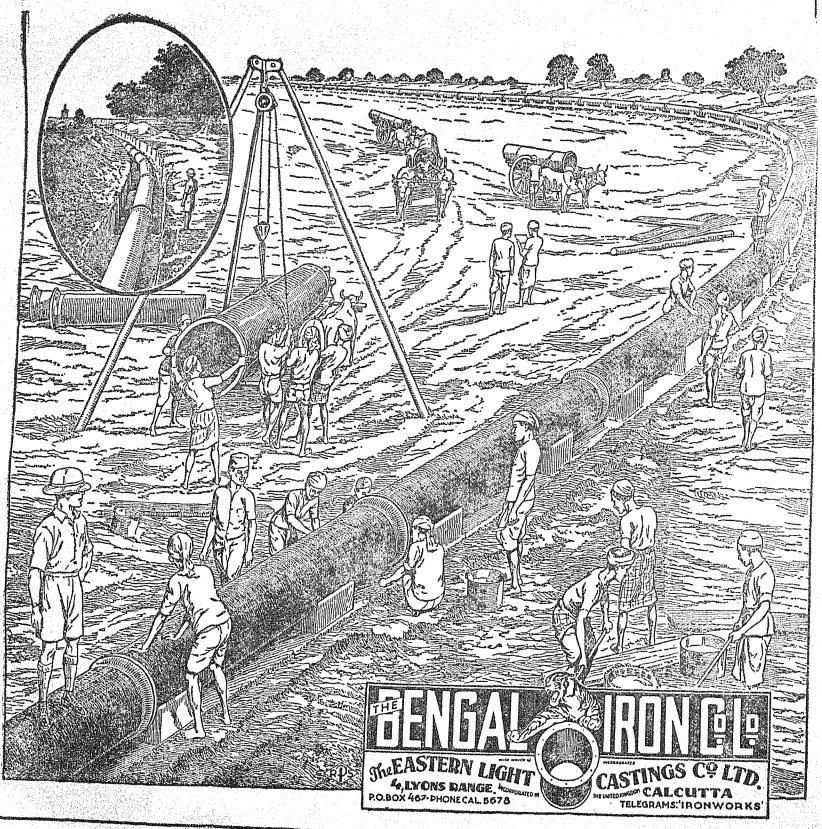
CAST IRON PIPES
for Water Schemes

Extract from "RANGOON GAZETTE" on the AKYAB WATER SUPPLY SCHEME, Dated 25-4-1933.

"The Completion of a work of this magnitude in so brief a time will be a creditable achievement, and if not indeed a record, certainly an exceptional accomplishment involving a considerable amount of organisation and hard work by all concerned. The BENGAL IRON CO. supplied the bulk of the pipes used in one consignment, chartering a special steamer to do so".

The Contract comprised:—1,760 Tons—Sizes 5" to 20" diam, including specials the bulk of which was shipped within ten days of the receipt of the order.

The laying was carried out by Messrs. Clark & Greig Limited of Rangoon.



Clive Street Gossip

"Eavesdropper" wires from Delhi:

Since my arrival here it has been pointed out that I have been saying, week in and week out, all manner of nasty things about the Assembly and its members and that I have returned to this topic frequently, so as to give the impression that I must be suffering from extreme vacuity of ideas or extreme lack of sense of proportion. Even my darling friend, Mr. B. Das, is somewhat sore, while Mr. Satyen Mitra is positively indignant. I feel that I should, by way of expiation, talk in the pleasantest vein to-day and distribute compliments and bouquets to one and all.

Why should'nt I do it? The main attraction of this feature is a personal touch; and a personal touch in my case means recalling or emphasising those aspects of every man which prove that every man has his strength, no less than his weakness. It is my business and pleasure in life to observe all that happens and record whatever is worthy, in order to prove that the world is an extremely nice place, that all the people are extremely nice people, and that, if we but know how to be nice and sweet to others, we would receive equally nice treatment from others.

I have never been a cynic. I have always had the fullest confidence in all my fellows, giving and receiving affection and regard in the full belief that you get back exactly as you give and that the world reacts to you exactly as you act towards it. With a philosophy of this kind, the role of a pungent critic, which I have been playing over the Assembly affair, is totally inconsistent. And my simple formula of conduct is more than vindicated in that "Eavesdropper" known and expected to be nice, had chosen to be nasty and must, therefore, be prepared to hear nasty things said of him. Thank God, that I could, in absolute truthfulness, act again up to my own conduct of life, as quite brave feats have been performed in Delhi in the last few days enabling the chronicler to furnish a cheerful and heartening story.

* * *

To start with, Sir George Schuster has won the golden opinion of all the Joint Committee members and all the witnesses as an ideal Chairman. He has given the fullest opportunity to witnesses to put forward their ideas and point of view and has encouraged members in all possible ways to draw out most valuable information from witnesses. On the first day of the evidence the bankers were not quite at home in that they were herded together and each group felt that, while the others were present, it could not speak out its mind freely. It is to Sir George's credit that he established the "conference" idea so completely and effectively that by the second day that irksome restraint and shyness disappeared and everyone felt convivial with everyone else.

Sir Osborne Smith's arrival on Tuesday promoted *bonhomie* to a marked extent. His towering and masterful personality is the sensation of the week. He has mixed with one and all—with members and the various groups of bankers—and he has played an important part in evolving common and agreed formulae on most questions. On the question of compulsory deposits, witnesses were over ready with their compromise proposals; and this was a tactical blunder. But in other respects their evidence has cleared up the situation in regard to the relation of the Reserve Bank to the Indian Banking System.

* * *

The Hon'ble Mr. Basu is determined to put up a fight against compulsory deposits despite the fact that bankers have, instead of strengthening, weakened his hands. The biggest achievement is the decision to make available internal remittances at par to all the member banks through the Imperial Bank, which will continue to hold the currency chests. This is, no doubt, a considerable set off against loss which will be occasioned by compulsory deposits.

* * *

The Hon'ble Mr. Taylor has struck every member as being well informed, ready with all references and eager to modify the scheme in such a manner as will make it wholesome. Mr. Aravamudha Ayangar joined the committee on November 1, being on special duty on the Reserve Bank Bill and is, admittedly, its biggest asset now. The non-official members like Mr. Pandya, Mr. Das, Mr. Mitra and Mr. Hossain Imam have been quite busy in making the fullest use of the evidence of experts. The Hon'ble Mr. Basu is, perhaps, the most conspicuous for the definite lead he is giving on most questions. The result of which is, I hear, to be a minority report to be signed by at least twelve members, possibly fourteen members. There may be a second minority report on the ratio question and composition of Reserve signed by nearly twenty members. This would be a surpassing achievement for this Select Committee. I also understand that a special opposition is to be formed for the Reserve Bank session of the Assembly with Mr. Neogy as leader. There are to be only two parties for this session—Treasury benches and Opposition. If this materialises, it will be an even more resplendent achievement.

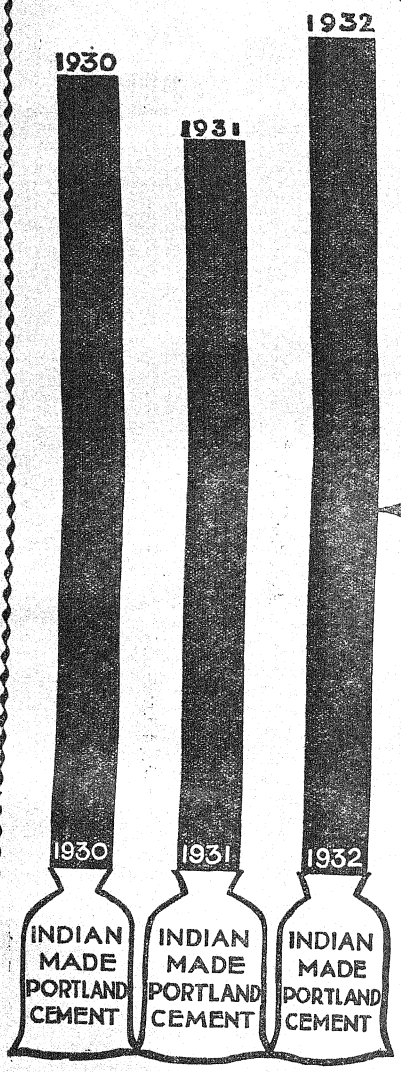
Clear Striking Proof!!



In bad times items involving recurring expenditure in maintenance charges are subject to very severe scrutiny.

Look at this graph showing a comparison between the Cement Marketing Company's dispatches of Cement in the years 1930, 1931, 1932.

The first cost in a concrete structure is the last cost. With the dissemination of this knowledge, cement is being used in increasing quantities for the construction of buildings, roads, bridges, concrete products of all kinds, and also as cement mortar instead of lime mortar.

All signs are thus most propitious and Sir George Schuster would, doubtless, realise that he must make all reasonable concessions, if he wants support for his Reserve Bank proposal in a way that will ensure its successful start and working. The Committee have definitely recommended the insertion of a clause that the Governor of the Reserve Bank should be one with at least five years' banking experience. This rules out members of the Indian Civil Service. I understand, however, that the India Office has instructed Sir George not to accept this amendment. But there will be such unanimity amongst the non-official members that the amendment must be pressed for acceptance. This nightmare of Sir Howard Denning is all the time there ; and members would not relent. The general view is that Sir Osborne Smith must be the first Governor and that Sir Kenneth MacDonald must be persuaded to continue for another two years as Managing Governor of the Imperial Bank and that Mr. W. Lammond must be Deputy Managing Governor, so that on Sir Kenneth's retirement at the end of the two years, he would be fully equipped to step into his shoes. Nobody can understand why any outside names are being considered at all when there is Sir Osborne—the man for the job, the man of 1926, chosen by Mr. Montagu Norman, approved of by the Committee consisting of Sir Purshottamdas Thakurdas and Sir Rajendranath Mukerjee, and found able in every way both by Sir Basil Blackett and Sir George Schuster. He is the first real banker we have had in India, and he is admittedly the ablest and most suitable choice. Why look beyond him? Is he unwilling? Or does Sir Samuel Hoare think him to be too strong? Sir Osborne is, true enough, a strong man ; but the Reserve Bank does require a strong Governor. He is the one and only banker who can make the Reserve Bank work.

THE GATEWAY OF INDIA

Bombay, Nov. 1.

Though of late feelings against Bombay are somewhat roused up in other provinces, the present plight of our staple industry is far from enviable. People outside Bombay think only of the enormous protection afforded to the cotton mill industry and the former wealth and present influence in Indian public life of the commercial leaders of Bombay. But no one stops to think of the plight of the industry in this city or as a matter of that, even this presidency, as a whole. It is a long time since this gradation of differential advantage came to be established in the cotton mill industry, Ahmedabad being better situated than Bombay, and the rest of India even better than Ahmedabad. The last mentioned was the scene during the week of a strike and consequent wrangles between capital and labour over matters which bear little relation to the original cause of the stoppage. The Labour Union preferred a request to the Millowners' Association for closing the mills as a mark of respect to the late Vithalbhai Patel. But Mr. Chimanlal Parikh, in consultation with the other members of the Committee, refused ; and the workers of four mills under the management of Mr. Parikh went on strike. The Labour Union as such disclaimed responsibility for this development and suggested in defence that, if it had been their desire and policy, they should have brought about a more widespread stoppage of work.

This was the occasion for other outstanding points of dispute between labour and capital to come to a head. It is believed that the Managing Committee of the Millowners' Association has suggested the stoppage of the collection of subscriptions for the Labour Union. The intervention of Mahatmaji has been necessitated and on October 25, the Millowners' Association received a telegram from Mahatmaji agreeing to arbitrate on labour disputes. The telegram states that Mahatma Gandhi has decided that the balance sheets of 22 mills should be submitted for arbitration by the Millowners' Association. Gandhiji is prepared to arbitrate at Wardha before November 8 on questions regarding double-side working in the spinning departments and the collection of subscriptions to the Labour Association. Gandhiji will arbitrate on the question of a wage cut while touring or will suggest the appointment of another arbitrator in his place.

As for Bombay, the troubles are even more serious. Since January last no fewer than 29 out of the total number of 81 mills have been closed, and there are reports that two more are likely to do so within a month or so. This development is duly reflected in the figures of production of yarn and cloth. Statistics for August and September are not yet available. But so far as can be ascertained, the production of yarn and woven goods in January was 24,679,000 lbs. and 20,915,000 lbs. against 22,810,000 lbs. of yarn and 18,398,000 of woven goods in July last. In other words, there has been a decrease of 8 to 9 per cent. in yarn and about 10 per cent. in woven goods during the first half of this year. The effect of this contraction of production on employment is that 45,000 men have been thrown out of work, some of them feeling so hopeless of regaining their job as to return to their native villages, while the others are trying to find other employment in the city. Of the 29 mills which have been closed four have been scrapped and sold at break-up prices. Among the textile concerns which have ceased working, a good many belong to the Sassoon and the Currimbhoy groups.

The following is the list of mills closed before January, 1933 and have continued to remain closed. Dinshaw Petit, Manekji Petit, Atlas, Assur Virji, Empress, Bombay Industrial, Ruby, Crescent,

PASSING SHOW CIGARETTES

Currimbhoys, Mahomedbhoy, Pabaney, Framji Petit, Jamshed, Edward Sassoon, Meyer Sassoon, Kasturchand and Imperial, Apollo, Alexandra, E. D. Sassoon, Rachel Sassoon, David Nos. 1 and 2, Pearl, Madhavrao Scindia, Mathuradas and Premier.

The state of the cotton mill industry has affected other departments of the commercial life of the City. But in the last few weeks the stock exchange has had puzzles set for it by the *debacle* of the Currimbhoys. The difficulties of this firm have created two different sets of problems, one being the more technical one of the stock exchange settling the contracts in respect of the shares of the Currimbhoy group of mills, and the other the reconstruction of the mills and the resumption of work therein in so far as it may be possible. When official action is rendered necessary in respect of any group of shares in a stock exchange, perplexing questions of equity and justice necessarily arise. No one would suggest absolute inaction on this account. Precedents in the prominent stock exchanges of the world clearly recommend a course of action calculated to terminate, in a rough and ready manner, the difficulties created by such crises and render possible the resumption of healthy activity in the exchange. The Board of the Bombay Stock Exchange have proceeded on this identical principle, though, of course, they have exposed themselves to criticism on this account. A general meeting of the Stock Exchange was held on Saturday afternoon; and the meeting approved of the scheme formulated by the Board with a view to affording immediate relief to the *bonafide* sellers of the shares of 6 of the Currimbhoy group of mills from the funds of the Exchange. The meeting was well attended, no fewer than 150 members being present out of the total of 180. The object of the scheme was to enable brokers to pay their clients the sale proceeds of all the Currimbhoy shares that were to be delivered to the clearing house for tht November settlement. In the absence of such a scheme, it is contended, *bonafide* sellers are liable to lose, if their brokers are not in a position to pay for their shares. It is desirable that *bonafide* sellers of shares should not suffer any loss, which they were likely to do, if buyers failed to take them up and pay for them owing to the extraordinary and unexpected situation created in the Exchange. It is clearly beyond the power of the exchange to give general protection to all those who bought the shares either for investment or for speculation. All that the scheme can do is to afford immediate relief from the special funds formed for the purpose, towards which they themselves have to contribute month after month for their mutual benefit. The formation of this fund, said Mr. Shroff, the President of the Exchange, at the same time ensures payment to genuine shareholders but should in no way suffer if they have sold off the shares before the present crisis. Clients who have brought the shares cannot insist on any benefit from these funds, towards which they did not contribute anything and they have, therefore, no claim upon them. With a view to answer any possible criticism of the special efforts of the Exchange in this behalf, Mr. Shroff recalled the Petit mill crisis of 1913 when the Exchange insisted on its members rebuying its shares which they did at a great sacrifice and a heavy loss.

Mr. Shroff treated the occasion of this general meeting as an opportunity for reiterating the demand of the Bombay Stock Exchange for the amendment of the Companies Act and the reform of the managing agency system, such as would eliminate the most obvious shortcomings and prevent the manipulation of accounts of companies to suit the personal convenience of those who may be in charge of them. Mr. Shroff blamed the press for its apathy to this matter of vital interest to the commercial and economic life of India.

And the *Times of India* came in for a pointed rebuke for overlooking its obligations in respect of the agitation for reform of company law in favour of criticisms of the scheme on which the Stock Exchange was then engaged. "If the same journal," Said Mr. Shroff, "has taken a similar interest in criticising a system which have allowed agents to remove crores of rupees of innocent and ignorant investors we should have been more willing to welcome any suggestion from this particular source as to what we should or should not do. The scheme was finally approved by the Board of the Bombay Stock Exchange at its meeting on Wednesday and the prices fixed are: Rs. 220 for Indore, Rs. 155 for Fazul Rs. 31-4 for Crescent Rs. 50 for Pabani Rs. 130 for Bleaching Rs. 85 for Pearl. In the case of the Indore Malwa shares, it is arranged that the purchasers should pay for at least one share against the purchase of four, and in the other 5 companies the purchasers have to pay at least one share against the purchase of 2 shares, a fraction of a share being considered as a whole share. It is intended that, if after paying for all the shares in this way any shares remained unpaid for, the Board of the Exchange will buy from the exchange. It is estimated that The exchange will have to invest at the most Rs. 3 lakhs. The clearing house commission is proposed to be doubled and the subscription for membership raised from Rs. 5 per year to Rs. 5 per month. It is intended that the additional revenue thus realised should be credited against the loss which the exchange may suffer by investing Rs. 3 lakhs in the Currimbhoy group of shares.

With the decision of Messrs. Currimbhoy Ebrahim and sons Limited and Messrs Currimbhoy and Company Limited to go into voluntary liquidation, the question of reconstructing the Currimbhoy group of mills has come up formally before their shareholders. The decision to go into voluntary liquidation was arrived at an extraordinary general meeting of the two companies when the following resolution was passed:

"It has been proved to the satisfaction of the meeting that this company cannot, by reason of its liabilities, continue its business. It is, therefore, advisable to wind up the firm, and, accordingly, it is resolved that the company be wound up voluntarily and that Mr. J. H. Hardie, Mr. B. J. Whitby, Mr. G. M. Bathgate, and Mr. F. A. Cole of Messrs. Fergusson and Company, Chartered Accountants, be appointed for the purpose of such winding up, with power to each one of them to exercise all the powers of a liquidator."

It is natural that the shareholders of the mills under the control of the Currimbhoy group should insist that the working of their concerns should not be stopped merely because of the fate of their managing agencies. But a nice point of law has arisen from the fact that Currimbhoys have mortgaged their managing agency commission to His Exalted Highness the Nizam of Hydrabad. The Nizam, in return, has appointed a committee of 4 composed of Mr. F. E. Dinshaw, Khan Bahadur Abdulla, Mr. Blunt and Mr. Kamar who are now managing the mills. It has, therefore, to be seen as to who is to decide the future of the mills, the Nizam and his nominees in the Committee or the shareholders of the mills. In the case of the Oosmanshahi mills limited, the agency is reported to have been hypothecated to his Exalted Highness the Nizam's Government. And it is believed that the Finance Department of the Nizam's Government has taken over charge of the mills and the agency.

SOUTH INDIA

(From Our Correspondent)

Madras, Nov. 1, 1933.

On Monday opened the Autumn session of the Madras Legislative Council. The Agenda for this session is far from impressive, the only item of popular political interest being the Estates Land Act Amendment Bill which, as will be shown presently, is the source of many a controversial point. The address of His Excellency the Governor to the Council reflected the drab nature of the work before it. The Governor could not be present in person, and in his absence the address was read by the President. In the very first sentence His Excellency announced the unwelcome news of his decision to extend the Madras Council "for one year from the date when the Council would normally cease to exist." No elaborate reasons were given for this course, probably, because the Government themselves are conscious that it is of a piece with other arbitrary actions. Reference was also made to the recent outbreaks of terrorism in this Presidency ; and the backs of all were patted impartially for the success in foiling the efforts of the terrorists. His Excellency congratulated himself for the measures he had taken to ameliorate the economic situation, though the only instance of it is the reduction of freights on the South Indian Railway on the exports of rice from the Southern districts to Ceylon. It is curious how Governments can claim credit for the belated adoption of demonstrably efficacious measures and not say a word about why such proposals were delayed in the face of convincing argument and widespread popular demand. But it is comforting to learn that, since then, the exports of South Indian rice to Ceylon have been on the increase and that, encouraged by these results, attempts are being made to form a syndicate of millowners and landholders in Tanjore in spite of the failure of earlier attempts in this regard. The public is also indebted to His Excellency for the information that a scheme for the inauguration of a Provincial Market Board with an expert market officer is under consideration. As for the question of remission of land revenue, it is futile to refer to the worn-out plea that it is impossible to remit taxes at one end and at the other, meet increased demands for public expenditure. Who does not know of the dreary deserts into which public monies have flown during the years of plenty or of the unconquerable tardiness in meeting the demand of popular welfare?

It is in his reference to the Estate Land Act Amendment Bill that His Excellency exposes himself most to the charge of overlooking the other side of the case, to the point of making substantial misstatements of fact. His Excellency claims that "discussions have shown that on many points a substantial amount of agreement can be reached. Many of these agreed points can be incorporated in the Government Bill and it is proposed, therefore, to go forward with it during the session." When the Council duly began the debate on the Bill, Mr. Munisami Naidu, the leader of the democratic party duly nailed the pretensions of the Government to the counter. Mr. Naidu went over the previous history of the Bill and his chronicle is adequate refutation of the claim of the Government that the new bill has incorporated the points on which agreement had been arrived at. It is ordinary logic that agreement implies the elimination of differences between two parties and, in this instance, the two parties are the interests representing the zemindars supported by the ministerial party of the Government and the interests representing the ryots. It may, of course, be said that parties in legislatures ravely present themselves in this clear-cut fashion, one section representing zemindars and the other the ryots. But it will be recalled that the break-up of the old ministry was mainly on this question. The Ministers who supplanted Mr. Naidu have been known for their sympathies with zemindary interest and the requirements of political tactics if not wider sympathies for the masses, may be relied upon to induce the opposition to espouse the cause of the ryots. Be that as it may, the Government's measure soon found a rival in the Bill introduced by Mr. Satyanarayana Choudhuri, but the latter could not proceed with it as he was awarded an official appointment which incapacitated him for continuance in the Council. When, however, the same measure was taken up by Mr. Venkatachalan Chetty the question rose whether in view of the short life of the Council the measure might not be left to be considered by the new Council. With the decision of the Government to extend the life of the Council by a year, the anxiety of the Government to see through its own legislative proposals was intensified. A motion for postponement resulted in a conference between the exponents of the rival views and, though there was some evidence of the spirit of give and take, we have it on the authority of the Leader of the Democratic Party that no agreement was arrived at and that the Government's claim to have incorporated these schemes in the new Bill could not therefore stand. The argument has been of little avail to prevent the defeat of the motion for adjournment of the consideration of the Bill and, at the time of writing, the Council is discussing the motion that "the official bill may be re-committed to the Select Committee with instructions that the provisions of the private bill may be also taken into consideration and incorporated in the official bill." This is the last attempt of the opposition to resolve the existing difficulties, but its fate still hangs in the balance.

An item of general popular educational interest is the interesting scheme of rural broadcasting which has been drawn up by the local branch of the European Association with the assistance of Rao Bahadur C. V. Krishnaswami Chettiar who is responsible for the success of similar efforts of the Madras Corporation. The value of a suitable broadcasting service in India is unquestionable. It seems as though broadcasting was invented for the special needs of a vast country with tens of millions of folk scattered in small villages. But difficulties of a technical and financial nature have dogged the steps of the enthusiasts of broadcast service. There can be no doubt that an All-India service is more or less completely impracticable. And if the unit of service is to be much smaller, it has necessarily to be on a linguistic basis ; but again one has to decide whether there has to be a further subdivision. The unit of service has inevitably to be the village and the service has to be rendered only on the basis of collective listening. The Madras scheme is based on a service area of 20 to 25 miles radius comprising a group of villages which may be between 300 and 2,000 in number but it is assumed to work on an average of 500. Necessarily, the villages have to make contributions which are calculated to amount to Rs. 120 per annum exclusive of licence fees. On this basis the cost of 500 transmitters could be met in 7 years. A beginning could, however, be made by reason of the willingness of the B. B. C. to lend the first transmitter. The transmitters, when established, will, in later stages, serve as repeaters for programmes of a higher quality sent out from provincial broadcasting station to supplement local service. The most encouraging factor at present is that Hyderabad is prepared to stand by the pledge of Sir Akbar Hydari to support any broadcasting service that may be instituted for the Southern Presidency.

To record the progress of the Mettur Project has become the periodical function of newspaper correspondents. But it is a subject of perennial fascination, even as the outflow of the water over the dam. There is genuine joy and a strange feeling of elation when one peruses the report of the progress made in Mettur. We are told now that the work is proceed-

ing according to programme and that by the end of August, 1933 the total filling of the dam amounted to 96.6 per cent. of the final total of 54.4 cubic ft. The work on the overflow section will be taken up only after the flit of the flanks of the dam on either side of it. The overflow gap which is 613 feet in width is to be raised by 76 ft. before the floods of 1934 and this means that 1,4000,000 cubic ft. of masonry has yet to be built. And as this work has to be carried out in an ever-decreasing area there can be little doubt that the work will be completed within time. The experimental opening of the high level sluices was done on September 1 in the same way as the low level channel which is now functioning very satisfactorily was opened formerly. The object of this experiment is to make sure that the rivetment or pitch is free from defects and that the whole system will work smoothly when a continuous flow has to be maintained for the purpose of irrigating newly reclaimed lands. Plans to derive a wealth of fish supply from the lake are being carried out by the Fisheries Department. Only a week ago a consignment of fish arrived from the Godavari district and the Director of Fisheries is inspecting sites for laying out fish farm at Mettur, where the breeding of fish could be done on the most up-to-date and scientific lines.

Thanks to the tremendous start in the generation of hydro-electric power and electrification of the country generally, Mysore has been able to maintain its progress which makes her easily the envy of the rest of India. She has to-day more than 100 villages which are electrified and being enabled to utilise electricity for agriculture and cottage industry. This development has given rise to a demand for distribution transformers and with characteristic energy the State attempted to meet this demand by local manufacture. The attempts have now been crowned with success, thanks largely to the co-operation of the Indian Institute of Science at Bangalore. With the collaboration of the Institute, the Department of Industries has succeeded in making an original insulating varnish and bushing compound which are all being used in the manufacture of transformers. Many experiments were conducted and now about 70 transformers have been constructed and a programme of manufacturing more than 200 transformers during the year has been drawn up. The State is attempting to be independent of imports even in respect of requirements for this manufacture. The transformer tanks are cast in the Mysore Iron Works, the bushings in the Government porcelain factory and the transformers are impregnated with suitable varnish containing mostly of Mysore lac and Bhadravati methanol.

An even more spectacular achievement is perhaps in store for Mysore in the construction of a dam bigger than the present Krishnarajasagara dam at Lakavalli. Lakavalli is a village in Tarikere which is a taluk of the Kadur District on the right bank of the Bhadra. As things are the rivers Thunga and Bhadra and the tributary Thungabhadra are running to waste. The first two are perennial as they have their source in the Western Ghats where the monsoon is the heaviest. The Lakavalli reservoir is designed to store the waters of the Bhadra river, to irrigate through the year 2,25,000 acres besides providing for the generation of electrical energy of 9,000 horse power. The outlines of the scheme as at present drawn up are simple. The catchment area of the reservoir is expected to be 760 square miles spreading over hill and dale. The dam is to be 3,200 feet long and the water 180 ft. deep against the 120 ft. of the Krishnarajasagara dam. The entire dam is to be built in stone and mortar and the estimated cost of the scheme is Rs. 5 crores. But the whole scheme is dependent on the Mysore Government being able to come to a satisfactory agreement with Hyderabad and Madras as the Bhadra river runs through the State and province in its lower reaches.

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

GREAT BRITAIN

THE DISARMAMENT CONFERENCE—EXIT GERMANY.

In the early part of the week, the withdrawal of Germany from the Disarmament Conference was the absorbing topic as much in city, as in political, circles. Events moved with a dramatic suddenness but not without room for doubt that some at least of the major moves on either side were pre-meditated. The Powers have cleverly conveyed the suggestion of strenous work nearing a natural fruition but upset by the unexpected truculence of Germany. On the German side, too, it does not look as though the decision to withdraw from the League of Nations and the Disarmament Conference was irresistably forced on Herr Hitler at the last moment. In a situation like this, mutual recrimination has naturally been rife ; but the markets were not so disturbed as one might expect.

The city was careful enough not to exaggerate the significance of these developments. The only section in which a net loss of a few points was recorded was German bonds ; and even in this there was a subsequent recovery, though not to the levels at which the fall began. Thinking it all over calmly, there is no reason why the action of Germany in regard to the Disarmament Conference should affect immediately the fortunes of stocks and shares in the exchanges and bourses. Of course, if one were to attach too much importance, either to the developments in Germany during the last few months, or to European history in the post-War period, one might see vague dangers of an impending European conflict or of a Germany goaded by interminable suffering and humiliation to upset the peace of Europe and the world. The position is such that it involves political, rather than financial, complications. And though it is a question whether the political irritations will not lead up in a reasonable length of time to a war with its obvious consequences on finance, there is no fear of any immediate or early upset.

The facts are quite simple. The Powers other than Germany were at the point of signing a convention designed to cover a period of five years which others wished to extend it to 8 years. The 8 years were to be devoted to secure two essential conditions, (1) a substantial measure of disarmament actually completed and (2) the achievement of the principle of equality within the realm of security. The scheme implied that the powers now restricted by the Peace Treaties should not increase the armaments but should express their willingness to conform to a time-table. During this interval of 8 years Germany's desire for equality was in some measure to be satisfied.

It was at this point that Germany threw the bombshell. In his broadcast on Saturday night, Herr Hitler declared that "As we have seen by the declaration of the official representatives of the great Powers that real equality for Germany is not intended, it is not possible for Germany to force herself on other nations in such conditions." And he continued, that, if the sacrifices of Germany could not lead to any real pacification of the nations "that was due to the character of the Treaty of Versailles." It would appear from various reports that Baron Von Neurath, the Foreign Minister of Germany, was himself taken by surprise by the announcement of the German Chancellor. It is quite possible that this suggestion, which has greater currency in British circles, is due to the anxiety to represent Herr Hitler as upsetting the plans of even his own Foreign Minister.

Whether or not the action of Herr Hitler is to be interpreted in terms of the generally indiscreet tendencies of Herr Hitler or in terms of the economic plans and failures in Germany, it is certain that the attitude of the British Foreign Office in the last stages had a great deal to do with Herr Hitler's outburst of exasperation. In his statement at Geneva on Saturday, which immediately preceded the German announcement, Sir John Simon reiterated that "the Government of the United Kingdom takes the view that agreement on a Disarmament Convention could not be reached on a basis that Germany, for example, should receive under it an immediate permission to rearm." Germany has always had the suspicion that Sir John Simon has been confessing an anxiety to placate France by being too stiff on the question of concessions to Germany. And his speech at Geneva on Saturday was calculated to incense Germany, as at that time the German Government could reasonably be supposed to have been making up its mind over the Draft Convention formerly submitted to it by the Conference.

The reactions of leading European statesmen to the German decision are interesting if only for the indication of the developments in the near future. So far as Britain is concerned, she has reason to be glad that the precipitate action of Germany has relieved her from the difficulty of achieving the two incompatible objectives of impressing the world at large with her sense of righteousness and at the same time not alienating the support and sympathy of France. As for Italy, her differences with the Powers were already manifested in the demand that the transitional period provided in the Draft Convention should be increased from 5 to 8 years. Again in the discussion on the motion to adjourn the Disarmament Conference for one week, while France was strongly opposed to any adjournment, Italy was anxious for a much longer period than was ultimately decided upon in order to secure time for a fresh attempt to bring Germany back. As in most other cases, it was left to the British to suggest a compromise to enable the Governments to take stock of the position. The two proposals of Italy are sufficient to rouse the suspicions of France and Britain and to induce them to watch the reactions of Italy very closely. It is a fact that Italy has never been completely united with Great Britain, France and the United States ; and now Signor Mussolini made references of the desirability of opening negotiations outside Geneva. It is easy to represent this as a desire to supplant the League possibly by the Four Power Pact. But it is well to remember that this suggestion is identically the same as was made by Herr Hitler in his broad-cast speech on Saturday night that he would be prepared to negotiate with individual countries elsewhere than in Geneva. Herr Hitler might well hope to win over Italy to his side and set her in clearer antagonism to France. This is part of the European game, and if Herr Hitler succeeds, it might almost be said that the era of European diplomacy which seemed to have been nearing its end has entered on a further period of active vitality.

The role of Sir John Simon in these significant developments has been seized by Mr. Lloyd George for one of the vitriolic attacks which owing to his own carefully nurtured fighting qualities as well as his present age are of late becoming only too numerous. But there is more reason in the present attack. It is not pleasant to recall that the present critic of Sir John Simon was the Joint author of the Treaty of Versailles of which the present injustice of Germany is only one of many such incidents. Mr. Lloyd George declared that the speech of Sir John Simon was "the piece of soap upon which Germany finally skidded into hostility towards the League". He accuses the League of Nations of

Air Mail Week

"pretentious chicanery which has at last brought Europe to the brink of war." To Lloyd George, Herr Hitler is only the mouth-piece of "the indignation of every honest man in Germany at the shameless and elaborate trickery and treachery perpetrated upon this great country."

Trade Treaty with Holland?

The rapid progress made by the British Government in the execution of its policy of bilateral trade treaties has set Holland athinking about the possibilities of concluding a similar agreement with Great Britain for herself. But there is a clear recognition, at least on the side of Holland, that the industry and trade of either country does not admit of reciprocal advantages similar to those secured by Great Britain in the case of other countries. A Dutch daily points out that in all her trade treaties Britain has started with securing special advantages for her export trade in coal; and the details of the agreement have been worked out subsequent to her understanding on this basis. In the case of Holland, however, the country is not in a position to offer any such inducements; because Holland has herself an indigenous production of coal, for which she has to seek foreign markets. And it is only to be expected that any advantage that she might give Britain by way of a quota or otherwise should have its repercussions in the foreign markets for her own coal trade. In the same way Britain has no advantage to offer to Holland in respect of her staple exports, namely, agricultural, horticultural and dairy produce. The protectionist policy of Britain has in the past hit Holland very severely ; and as Britain's schemes in regard to such produce are a vital part of the present fiscal policy in relation to the Empire and in relation to the Scandinavian countries, with whom her commercial relations are very close, Britain cannot be expected to alter the basis of the entire edifice of fiscal reform, which she has raised laboriously during these years and which, she has reason to believe, has a large place in the recent recovery of trade and industry. After all, Holland has little to offer for this apparently great sacrifice. The examination of this question by the Dutch paper and the previous experience of negotiations in this regard between the two countries only leads to the conclusion that it is idle to explore further the chances of trade agreement ; and that it would be well, given the present goodwill between the two countries, if they are content to approach each other's problems in a spirit of sympathy and interpret and apply the existing regulations in a liberal spirit.

Expansion of the Steel Industry

The recent improvement in the condition of the British steel industry has been reflected in the plans, that have now been formulated, to recondition the Cardiff Stel works of the British Iron and Steel Co., Ltd. It will be remembered that the Company was formed to amalgamate the heavy iron and steel interests of Guest, Keen and Nettlefolds, Ltd., and Baldwins, Ltd., which hold all the shares and income notes. The Chairman of the Company, Sir John Field Beale, has written to the Lord Mayor advising him of the proposal to reopen the Cardiff works seeking the approval and co-operation of his council for the execution. The new works will provide for the manufacture of about 300,000 tons a year of billets and sheet bars with provision for an increased output, when the conditions of the trade warrant such an increase. When the works are reopened, they will have made a considerable contribution to the total volume of employment to the country, because not only will it employ 1500 men directly in the works, but it will have also set more men to work at the Docks, limestone quarries, iron ore mines, transport etc. There is, however, one difficulty in the way of immediate execution of the scheme ; for the output can be remunerative only, if the company can depend upon the continuance of the present protection to the steel industry which is now limited to only a period of one year. So that, if the adverse development takes place, conditions will have become difficult even before the works actually start operations. But there is no reason to suppose that the British Government will go back upon its policy of affording additional protection for the steel industry. And Sir John has clearly pointed out that this need not stand in the way of the whole plan being proceeded with, without delay.

Coal Quotas & Export Trade

The difficulties of the coal trade consequent on the trade treaties with Finland and the Scandinavian countries securing special advantages for British coal have now come to a head. It was pointed out some time ago in these columns that, in the altered conditions, the Coal Mines Act of 1930 did not, and could not, be expected to work smoothly. Under the scheme of inland quotas provided for in the Act of 1930, districts like South Wales lost some of their inland trade to the export districts, which took advantage of the development of coastal shipping. Now that the exports markets for British coal have been broadened, it is necessary that greater elasticity should be given to coal exports, in order that the coal trade may reap the full advantage of the trade treaties. The Government pointed out long ago that the industry should set about arriving at a voluntary agreement providing for the altered conditions of the industry, and that, in the event of their failure to do so, the Government would have no option but to impose a scheme of their own. It should, perhaps, be pointed out here that, in order that the Government may enforce a voluntary agreement arrived at among the coal miners themselves, the proposed scheme should have the support of 90 per cent. of the miners. The Central Council of Colliery owners met during the week to reach an agreement on the outstanding questions. But it was stated afterwards that "a number of points of difficulty in regard to the operation of suggestions which have been before the committee will require further consideration and no decisions have been taken on any specific alteration of procedure". But the Government have been showing great impatience with the Council for its delay in producing a scheme, which could assure the Government that the gains of the Trade Treaties concluded by them after great labour will not be lost to the country by reason of the disagreements between the coal owners. Though the meeting did not reach a successful termination, the Council has been anxious to remove from the mind of the Government the impression that the agreement was being unduly and almost dangerously delayed. The Council announced therefore that it will "of course, continue as in the past to make full provision for the export trade." But it is doubtful if the Government will attach any value to this statement. For the machinery used in the past is clearly inadequate to meet the situation ; and so long as a new plan has not been evolved, the Government can take little comfort in vague assurances emanating from the Council. If the Council at least takes some tentative sttps to avoid loss of any of the gains of trade treaties, the Government of course would be prepared to wait. But if, on the other hand, the trade is not prepared even for tentative measures of this kind, there can be no doubt that the Government would feel its hands forced in this regard.

UNITED STATES OF AMERICA

SPEEDING UP FARM RELIEF

The Recovery Administration has entered an interesting phase. Mr. Roosevelt is trying, might and main, to postpone, if not avoid altogether, the inflationary measures which are the professed, and the

Air Mail Week

obvious, means of raising prices. His first subterfuge is the expansion of credit through the agency of the Reconstruction Finance Corporation. He has clarified his plans in this regard; and before long the R. F. C. would have, through its intermediary, the Liquidation Corporation, made available for the people at least 50 per cent. of the total frozen deposits of banks which have remained closed since the crisis in March last. The open market operations of the Federal Reserve Board have continued for sometime now, and will have before long, contributed a substantial quota to the total volume of purchasing power and the total volume of credit in the market.

But at the moment it looks as though Mr. Roosevelt's plans in respect of the expansion of credit will be upset by the impatience of the farmers. The position of the farmers in the present Recovery Administration is, by no means, calculated to placate them or to assuage their resentment against their long suffering. At the time the Recovery Administration was brought into force, it was widely believed, and naturally, that the first aim of any Recovery Administration would be to rescue the farmers from the depression which, in their case, is far more long-dated than in the case of industry. And yet, though the Recovery Administration has worked for more than a half year, the farmers have got nothing tangible out of it. During the days following the re-imposition of the embargo on gold, prices of farm products were, no doubt, going high; but the movement was of a purely speculative character; and the farmers were not able to dispose of any part of their holdings at this seemingly attractive price. Since then, the setback has occurred and the farmers have now to be passive lookers—on at the tuzzle between the Recovery Administration and the recalcitrant industrial interests, whether from the capitalist or from the labour ranks. There is reason for them to think that at the moment President Roosevelt is engrossed in the pre-occupation of bringing about a settlement of the industrial problems. In fact, that Mr. Roosevelt was exerting himself in the cause of expansion of credit, when, according to the original programme and the wishes of Congress, he should be carrying on a vast inflation of currency in the country, is sufficient to damp the spirits of farmers; and there has been during the week a widespread protest against the present methods of the Recovery Administration and a demand that the President shall forthwith launch inflationary measures such as are calculated to raise farm prices again to remunerative levels.

The political strength of the farming interests in the present American situation is well-known, and it may be supposed that with Congress due to meet within about two months, the Administration should feel obliged to pay more heed to the demands of the farmers. There is ample evidence that the Administration is now busying itself with the formulation of measures calculated to give substantial relief to the farming interests and to help the much-desired rise in prices of farm products. So much has the conviction grown in America that the President is sooner or later bound to bring measures of agricultural amelioration into force, that the week under review presented the somewhat curious spectacle of grain showing upward trends and industrial and other stocks and shares being on the downward path. It is, therefore, necessary to examine at some length the measures that are now contemplated by the Administration in answer to the demand of the farmers.

Subterfuge form Inflation

It is not to be supposed that because of the necessity of affording relief to the agricultural interests the President has held in abeyance his scheme for the avoidance of inflation. Rather, it is possible that the President thinks that his plans for the relief of agriculture and for the provision of credit to industry would together form a better substitute for the crude inflationary measures for which the country, as a whole, stands and the farmers particularly. It would be useful if we sketch the latest developments in the policy of effecting an expansion of credit before we begin to deal with the measures of farm relief now in the administrative anvil. The best informed circles still believe that the moment the conversion operations have been completed, there will be a new drive towards inflation and, they add, consequent instability. If that were so, hat stage has already arrived with the over-subscription of the 500, million dollars of Government bonds recently issued. It is sufficient answer to the detractors of the present Administration that, amidst all the prevailing uncertainty, investors are prepared to subscribe so

largely to the Government loan. There are some who think that the existence of a large export surplus of wheat, which necessitates competitive prices for profitable disposal, militates against the adoption of any seriously inflationary programme. There are others who hold substantially the same views as *Indian Finance,* that the credit expansion programme and the schemes of public expenditure would suffice to sustain Autumn and Winter trade. The Government, for its part, is proceeding with its programme. According to the New York Evening Post the officials might feel obliged to close a substantial number of banks on the ground that they would be unable to qualify for the deposit insurance scheme at the end of the year. The depositors in such banks are, however, being afforded such relief through the Liquidating Corporation whose function it is to help in freeing the deposits of banks already closed. It is generally supposed, though details are neither known nor can be guessed, that the Corporation will buy the assets of all such banks for cash; and the effect of this on the total credit situation is obvious. Later in the week it was known that the deposit liquidation section of the R. F. C. has been authorised immediately to pay up cash to 50 per cent. of the 2,000 million dollars of deposits of banks closed by the March holidays and not reopened since. This is characterised as the safest form of inflation, necessary and advisable in view of the recent slump in prices. Loans are proposed to be made to the liquidators of closed banks, if the assets are sound; and the liberality of the scheme consists only in a more generous appraisement of the existing assets. According to an announcement made by the Savings Banker's Convention, there will be additional general banking legislation enacted by Congress and by the legislatures of States early next year. The effect of such legislation would be to extend the privileges of branch banking to a number of institutions.

Reduction in N. Y. Bank Rate

The extraordinary measures dealt with above have not excluded the Administration from resorting to measures ordinarily adopted by central banks in furtherance of a policy of labour credit. On October 19 the Federal Reserve Bank of New York reduced its rediscount rate from 2½ to 2 per cent. It will be remembered that the last change in the bank rate was as long ago as May 25, when it was reduced from 3 per cent. That the bankrate remained unchanged for a period of nearly a half year is only a testimony to the belief of the Government that the present times do not admit of the more commonplace remedies. But at present there is more than one argument to adduce in favour of the reduction of the bank rate. Firstly, when the Administration is intent on expansion of credit they have no reason to rule out any one measure calculated to help that end, as in the complicated situation that is ruling at present the cumulative effect of a number of such measures might be very considerable. There is also the other consideration of a low bank rate helping to check the flow of capital to New York after the flight of the period immediately before. Not that the repatriation of capital is unwelcome by itself, but the effect of the return is to bring about an undesirable strength in the exchanges at a time when a rising dollar might undo a great deal of the work of reconstruction that has been achieved since the Recovery Administration started on its course. It may also be that the Government entertain the hope that the reduction in the bank rate would blunt the the edge of the agitation in favour of wild inflationary schemes. So far as the week is concerned, the reduction failed to stimulate either commodity or stock prices; but then it is too much to hope that the mere announcement of a change in the bank rate would achieve what more fundamental and more elaborate plans have failed to secure.

The other measure of an ordinary kind adopted by the Government is the continued purchase of Government bonds through the Federal Reserve Bank. During the week the Federal Reserve Bank purchased 31 million dollars of Government bonds compared with 35 million dollars in the previous week. But the purchases of Government securities have only had the effect of swelling the reserves of member banks, which have now increased to 800 million dolllars. The purpose of the operations has, therefore, been defeated, and it is probable that, as there is little chance of its proving more successful in the future, the resources of the authorities will not be employed any longer in persisting in this measure.

ADMINISTRATIVE SIDE OF N. R. A.

Until the fate of inflation proper is decided, the Administration will have to rely on the cumulative effect of a number of measures which considered separately, cannot be equal to the task of stimulating economic recovery. And this tentative programme has many aspects. One is the purely credit side, comprising the task of raising money for the Government, providing resources for the various corporations doing reconstruction work, pumping credit into the system and controlling banks and stock markets. The other is the purely administrative side, checking the defections to the general principles of the Recovery Administration and tightening the control over the various industries. The third and, for the present, the most important aspect is that of subsidies to domestic producers, which answer a number of purposes at the same time. Primarily, they serve to expand purchasing power within the country. Then there is the advantage of placating certain sectional interests who would prove dangerous to the whole scheme if their grievances are not redressed in time and adequately. The subsidies will have the effect of persuading the interests benefitted to acquiesce in

any scheme of restriction or other, calculated to bring about a better co-ordination of the various parts of the recovery plan.

Stock Market Control

We have referred to the purely financial measures. It would perhaps be useful to point out that by the publication of the terms of the Securities Act, the Administration have taken the wind out of the sail of the critics of the Government. The provisions are so reasonably worded that no bona fide borrower in the new capital market will have any legitimate complaint against new restrictions. They only seek to ensure that the investor is provided with sufficient data for judging the prospects.

Punishment of Defections

The administrative side of the recovery is being attended to. Attempts are made to bring the stragglers again under the banner of the N. R. A. Prices are being fixed on the basis of the average cost of production in each area for the lumber industry, whose leaders have now met in Washington. The tyre industry is making similar attempts; but in this case production quota plans are banned, the industry being content with prohibition of sales cost of production. The Department of Justice and the local Compliance Boards have been asked to ferret out cases of code violation and prosecute offenders.

Farm Relief

By far the most important work of the Administration now is the provision of subsidies to domestic producers either directly in cash or indirectly by tariffs. So far as agriculture is concerned, the latter method is ruled out, as it is hopeless to expect in the present conditions that American farmers will be able to capture foreign markets to competitive prices. The plan for compensating farmers, who curtail their maize acreage and production of hoges, is the latest example of this form of subsidies. A processing tax of 50 cents per cwt of hogs will go into effect on November 5. This is expected to provide 348 million dollars in the two year period in which it will be in force. 40 million dollars will cover the cost of the Government's plan for purchasing hogs for the destitute; and the remainder will be distributed to farmers as compensation. It is natural that the demand for similar help should be made by other interests. The American Cotton Co-operative Association is the first to do so; and it is urged that, unless the price of cotton is raised to 15 cents a lb. immediately the acreage restriction campaign has gone through, 2½ million bales of cotton will be dumped on the market by farmers who are in serious need of cash. Subsidy by tariffs has been made available for the domestic producers of liquor in the shape of an embargo on further imports of medical liquor. The Tariff Commission has also been directed to draw up a list of imports upon which similar tariffs may be imposed with a view to the preservation of domestic industry.

Business Reports

Business reports are encouraging. "Steel" reports an increase of 2 per cent. in mill activity during the week due to a speeding up of production in order to complete specifications on expiring contracts by October 15. The fourth quarter business is described as being exceptionally light. But it is expected that troubles may arise due to demand of higher prices. Companies like the tinplate have found that their increased costs are not covered by the present prices. The present price per base box is 4.65 but the 1934 deliveries have indicated advances on the present level. According to the "Iron Age" steel ingot production for the week is at 30 per cent. of capacity a decrease of 5 per cent. compared with the previous week. The Census Bureau reports that September cotton consumption totalled 499,486 bales, compared with 588,570 bales for August and 492,742 bales in September of last year. Spindle activity and exports for September continue to show an increase. Exports totalled 869,244 bales, compared with 733,665 in September, 1932. As regards employment, 620,000 workers were re-employed during September, according to the Secretary of Labour, Miss Perkins. Thus the six months' total comes to 2,700,000. It is also encouraging that the steel strike in Pennsylvania affecting directly more than 13,000 men has been settled. Likewise, in the textile industry substantial increases have been registered. But further expansion of the productive capacity of the cotton industry will henceforward be limited by a ban on the purchase of all new machinery other than replacement.

FRANCE

FINANCIAL STORM

The Finance Reform Bill, introduced in the Chamber of Deputies on October 17, holds the public interest, to the exclusion of all other topics. As pointed out previously, the German bid for re-armament, followed by her resignation from the League of Nations, has gone a long way to blunt the edge of the opposition to the Government's financial proposals. But it is felt that the requisite change in psychology has not been brought about, as the feeling among fonctionnaires, that a section of the citizens, able to bear further taxation, has successfully evaded the payment of tax, so far, and is no nearer to being netted, is still quite strong. As these fonctionnaires have for their patrons that section of the Deputies in the Chamber which holds tht controlloing voting power, the Government was wise to introduce, at the same time, two other bills, the Public Works Bill and the Protection of Public Savings Bill. These two Bills are intended to render Finance Reform Bill palatable, both to the intended victims, and the Socialist Party, on whose support the Government depends ultimately for its life.

Finance Reform Bill

The salient features of the Finance Reform Bill are to meet the tactics of the tax-evaders, from whom the Government hopes to obtain 700,000,000 f., by a compulsory deduction of 15 per cent. from their coupons, except in the case of National Funds. Every Civil and Military employe of the State, as well as every pensioner, except those rated as 85 per cent. disabled, is to have his salary or pension reduced by 6 per cent. if under 25,000 f., and, if over, by 7-8 per cent. on a sliding scale. It is also provided that a similar sacrifice shall be imposed on private incomes which have not fallen more than 10 per cent. below the 1929 level. But this latter imposition brings in only 150,000,000 f., whereas the cutting of State salaries and pensions mean an economy of 1,300,000,000 f. To this, 400,000,000f. more is to be added through reductions of allowances.

The Bill also brings, under the Business-Turnover Tax, gas, water and electrical undertakings, hitherto exempt, while forbidding the companies to pass the burden on to their clients by raising tariffs. This latter reform is to bring in 500,000,000 francs. The new patrol tax, which is substituted for the existing tax on cars, is fixed at 60 francs per hectolitre, and is estimated to produce 450,000,000 francs.

By these measures of taxation and precaution, the Government hopes to obtain 2,000,000,000 f. extra, while the economies proper represent about 1,850,000,000 f. The profit from nickel coinage amount to 680,000,000 f., and that from the sales of National lottery tickets 650,000,000 f. The balance of the budget deficit will be provided for in the ordinary Finance Bill. In the manufacture and sale of all arms, the State has a monopoly.

The total expenditure for 1934, if these reforms are carried out, will amount to 48,500,000,000 f., against 50,500,000,000 f. in the current year and 53,500,000,000 f. in 1932. Of this total, 12,000,000,000 f. represents debt charges and 7,000,000,000 f. national defence expenditure, exclusive of personnel.

The Government warns the country that next year the Treasury must face maturities of 15,000,000,000 f., and by way of consolation, promises various measures for reducing the cost of living, beside a public works programme extending over four years and entailing an outlay of 13,750,000,000 f. all presumably to be raised by loans.

M. Daladier, as if anticipating the flight of capital, said while introducing the financial proposals, that France should run no risk of having foreign capital withdrawn, through lack of confidence in the country's finances, at a future date, when other countries had adjusted their finances. In a statement to the Press, it has also been pointed out that the Budget deficit must be dealt with immediately if the State is to be able to borrow money to meet bonds falling due next year and to finance the public works programme. To deprive the State of borrowing powers, the statement says, would mean inflation, and the Government is determined to maintain the franc at its present value in relation to international currencies.

The Finance Committee of the Chamber of Deputies has already approved of a number of articles of the Government's financial reconstruction plan.

M. Leon Blum, the socialist leader, proposed an amendment providing for the nationalisation of the manufacture and sale of armaments; the Government plan provides for a monopoly.

Later, the Finance Committee voted in favour of arms nationalisation, against the advice of M. Daladier. However, the Budget Minister intervened, and the Committee reversed its decision.

Senator Henry de Jouvenal, former French Ambassador in Rome, in an address to the economic advisers of the Ministry of Commerce, has now joined the ranks of the statesmen and economists who have urged the necessity for internal economic reconstruction if France is to recover from the crisis. He summed up France's chief troubles as follows:—Costs of production are far too high. Exports have dropped by 60 per cent. since 1929. The crisis has made France repent the consolidation of five thousand items on the tariff in 1928. The currents of trade are deflected by currency restrictions and currency depreciation.

M. de Jouvenal said that a vigorous voluntary effort at rationalisation and wage cuts was necessary. Was it not better to concede voluntary cuts than to suffer the same process by inflation, he asked.

The Government has, so far, weathered the storm that is raging round it over the Finance Reform Bill.

M. Daladier, the Premier, was in the Lobbies and discussed the situation with a number of deputies, while in the Committee Room the much-discussed clause in the Bill, which levies supertax on all salaries of civil servants, was passed by 13 votes to 9, but with 14 abstentions.

The view is that while a big political battle will be waged in the Chamber, the Government will be attacked more on the methods of enforcing any laws, rather than on any principle.

The factors that count for Government's success are the reduction of the cost of living, the prevention of tax-evasion, and the redress of fiscal exemptions and irregularities. As for the first, Government does not inspire confidence, as a policy of high protection for agriculture and industry is already in stride. As for the second, it will prove a battle of wits. Whether the tax-evaders cannot circumvent Government measures, it is too much to hazard an opinion upon. The last factor is a matter that would require some space of time. Barring these three, only a scare can force the sacrifices on the part of the tax-payer and *fontionnaires*. The German bid for re-armament already did what it could. If it pleased Herr Hitler, he could still save the French financial proposals by one or two telling gestures. If that source fail, a threat to the currency is the sole, solitary help to complete the financial reconstruction. If none of these probabilities turn up in time, M. Daladier's Government falls.

THE ROMANTIC SIDE OF INDUSTRY
CARRERAS

The expression of "Romance of Commerce" is one that is often used but seldom met with in real life. So that the story of the amazing rise of Carreras Ltd., will surely interest the readers of Indian Finance. The combination of circumstances that started this gigantic business was a witty series of articles by J. M. Barrie; republished in book form as My Lady Nicotine; and a Polish emigrant to New York City who in common with many of his countrymen possessed not only an inventive brain but enterprise as well.

The house of Carreras dated back practically to the introduction of tobacco into Europe. It was in the seventeenth century that Jose Joaquin Carreras settled in London and sold fine tobacco and snuff; making for himself a considerable reputation for his wares. At some date very many years ago the Earl of Craven and the then proprietor of the business evolved a mixture which was christened Craven. This was the Carreras star turn. Later, other mixtures were added such as Hankeys and Sil Philips. The fine old business enjoyed a humdrum prosperity for several generations and about the middle of the nineteenth century it fell into the hands of a relative by the name of Yapp. Carreras' shop was in Wardour Street, London and was a picture not easily forgotten. A long counter where polite assistants ministered to your needs. Old fashioned tobacco jars at the back of the counter; the atmosphere reeked with the fragance of Latakia and Perique; while at the back of the shop a couple of blenders and some apprentices put up the various varieties under strict supervision of the proprietor. The pride that Yapp took in his blends was remarkable. Only the most first class tobaccos entered his blending rooms; and in all probability the business would have gone on to this day in the same style; but to use Rider Haggard's expression a strange thing happened.

In the late eighties a young man named Barrie now Sir James Barrie began to attract attention by a brilliant series of novels. The first was A Window in Thrums followed by Auld Licht Idylls and then My Lady Nicotine. This last book had a very wide sale and public curiosity was aroused by the author's laudation of a certain tobacco that he called the Arcadia Mixture. The blending of wit and adoration with which the author described Arcadia created a demand all over Great Britain. Here is one extract out of many.

"When he was at school Jimmy Moggridge smoked a cane chair and he has since said that from cane to ordinary mixtures was not so noticeable as the change from ordinary mixtures to Arcadia. I ask no one to believe this, for the confirmed smoker in Arcadia detests arguing with anybody about anything. Were I anxious to prove Jimmy's statement I would merely give you the only address at which Arcadia is to be obtained. But this I will not do. It would be as rash as proposing a man with whom I am unacquainted for my club. You may not be worthy to smoke the Arcadia Mixture."

It will be seen at once how tantalizing this was. Here was evidently a glorious smoke yet no one could find where it was to be had and a huge unsatisfied demand was created, for the sale of the book ran into tens of thousands. Unscrupulous dealers took advantage of the situation and sold spurious Arcadia Mixtures, much to the annoyance of Mr. Yapp who knew young Barrie as a regular customer. He knew all his customers as far as that goes. Then one day he asked Barrie for premission to disclose the fact that the Arcadia Mixture was Craven. Barrie gave his consent and wrote the following letter which was allowed to be reproduced. "What I call the Arcadia Mixture in My Lady Nicotine is the Craven Mixture and no other." Then Yapp's advertisement agent produced the most extraordinary picture of a punt on the Thames with a huge tin of Craven at the fore. The tin was many timts larger than the punt but; included in the picture was a fascimile of Barrie's letter.

The day following this weird advertisement in the illustrated press, Carreras' shop was pandemonium. The staff was utterly unable to cope with the crowds of customers and had to be doubled and trebled. Letters arrived by every post by scores; telegraph boys delivered their orange missives all day long. Of course the stock gave out; a particular perique used in making Craven Mixture became unprocurable and Yapp would have died a hundred deaths rather than use any other. But at last, things straightened out; The business adopted itself to the new conditions and increased in geometical progression; to such an extent that Mr. Bernhard Baron found it worth while to purchase it for £150,000 in the year of grace 1903. By that time the business had outgrown its original proportions many times over and could only be controlled by a Company. And so we come to the other actor in the drama Mr. Bernhard Baron.

He was born at Brest Litovski in Poland in the year 1850. There he lived, received his education and early training until he reached the age of eighteen. He then became one of the stream of emigrants that in those days constantly increased the population of the United States. He landed in New York, penniless, and obtained work in a tobacco factory at four dollars a week, out of which he saved half. Thus early in life he showed the prudence and sagacity that distinguished him through his career. He was not going to spend his life as a worker in a factory; he saw visions ahead and with his savings at last he started business for himself with an initial stock of five hundered cigarettes which he made himself by hand and sold at a profit; thus starting himself in business. But what a contrast to later days when one of his machines alone made 400,000 cigarettes a day and he possessed the organisation to sell the product of scores of such machines. But that is getting ahead—Young Bernhard Baron was of an inventive turn of mind and he foresaw the future of the Cigarette. Then he invented the Cigarette, making machine which was to revolutionize the World as far as smoking is concerned. But no one would look at the thing in the United States. Unlike the Athenians they wanted nothing new; at least on that occasion; so with his baby, Baron went to England. There he sold his patents for £160,000 and sought for new worlds to conquer. With his old time shrewdness he saw the possibilities in Carreras' business and he acquired it. At first it was a hard nut to crack and it took five years to make his new venture a success. Now the Company has the largest single factory in London, five hundred feet of frontage guarded by two gigantic Black Cats in Stone, and flood lighted to dazzling whiteness at night—Yapp, by the way, always clung to Black Cats. He called his cigarettes by that name and he had a Black Cat Mixture, even in the early Barrie days. In addition to the huge factory in London there is another in Melbourne and now we have Carreras (India) Ld. Calcutta with a Capital of two crores of Rupees.

The Calcutta factory was designed and put together by Mr. W. H. Louden the Engineer and Director to the home Company and Mr. W. C. Taylor the

the Chairman and Managing Director of the Calcutta Company. They were fortunate in being able to acquire a Port Commissioners Tea Ware-house and the shell of the old building saved time in the new construction. The factory was got together in three months.

The first impression one gets when entering the building is the atmosphere; which is kept at 80 degrees by an air cooling plant on each floor. The next impression is the exquisite neatness, cleanliness and workmanlike arrangements of the whole concern. The raw material enters on the ground floor and by degrees emerges from the packing room in packed cases ready for the market. Only imported tobacco is used and this is treated in Bond with a Custom Officer in charge; as a rebate is allowed on the Stalks which are rejected for cigarette making and are used for firing the furnace. The saving in duty is very great as imported tobacco carries a duty of two rupees a pound. It is amusing to notice how the weed is coddled and petted. The stalks are extracted by lads who work on piece and make good money. But before this the leaves are sprayed, to make them supple, and left slightly damp for 48 hours. After this process they mature for forty eight hours and then they are cut up at incredible speed in a guillotine. By the way the first process of all is blending the raw leaves, this being done by experts as the cigarette flavour must be kept uniform and every tierce opened is tested; nothing left to chance. The machines that make the cigarettes are amazing and appear to do anything except talk and they will probably develope the gift of language before they are much older! The rice paper goes in, is filled with tobacco, rolled, pasted, printed, cut into correct lengths, and ejected at the other end perfect cigarettes, if the cigarettes are cork tipped this is done at the same time. One machine runs off 800 cigarettes a minute, the others merely make 300; slow coaches of course-just a mere 18,000 an hour a trifling lakh and forty four thousand in a working day nothing to speak of, of course! And this gone on day after day, month after month, year after year—Where do they go? Where are the mouths to smoke them? The packing, tinning, soldering, is all done by cunningly devised machines. Yet with all this labour saving machinery the factory employs 500 hands, all happy and contented; earning good money. Their health is looked after—A hospital room fully equipped is ready to treat any accidents and there is a fully qualified English Nurse in attendance—All the arrangements are carefully supervised by Mr. Tayler himself with a loving care which endears him to the Staff.

The factory has been honoured by a visit from His Excellency Sir John Anderson the Governor of Bengal who commented on its efficiency and the humanity of the management in the way they looked after the welfare of their employees.

And so we see to-day the sequel to old Jose Joaquin Carreras, long laid to rest, Sir James Barrie and My Lady Nicotine and the far seeing Bernhard Baron who put his magic touch to make the present gigantic combination and which before he died was employing 5,000 souls. He started on 500 cigarettes which he rolled by hand himself! During his life time he gave away six million pounds in charity to all classes and creeds. His Son Sir Louis Baron, Bart, now controls the whole concern.

(*Continued from page 1093.*)

accrue to the company through this policy. And it is this Reserve of a policy the constitutes the maximum limit of the surrender value of the policy in question that an office may allow without in any way hindering the interests of the other policyholders.

Usually a policy acquires a surrender value only after the payment of the first two and in some cases three years' premiums. In case of with-profit policies the present cash value of the bonus that has already been vested with the policy, will be added. In calculating the surrender values, the entire first annual premium will be deducted for reasons already stated, and generally a minimum percentage of all the premiums paid less the first year's, is guaranteed under the policy conditions. This percentage will increase as the number of premiums paid increases. It has become the modern tendency of life assurance companies particularly in U. S. A. and Canada to grant high guaranteed surrender values and state these values in the policies themselves. I shall in my next article deal as to how this system has been much abused in those countries and as to how the life assurance companies were badly affected by the unprecedentedly heavy demand for surrender values during the recent depression years. Most of the offices quote the surrender values on application by the policyholder, but now-a-days it has become the increasing habit of life offices to include in the policy itself schedules of surrender values that can be obtained after the lapse of successive years. Much can be said for and against this practice, but suffice to say here that in the interests of the policyholders this practice is not quite desirable.

A paid-up-policy is one that a life office is prepared to give in exchange for the original policy, with no further obligation to pay premiums thereafter. It will be for a reduced sum and will become payable under exactly similar conditions as the original policy. This is one of the numerous ways by which life offices help and benefit their clients under all possible future circumstances. If by misfortune, a policyholder is placed in a position in which he cannot thereafter continue the payment of the premiums under his policy, he can easily convert it into a fully paid up policy for a reduced sum, by applying to the company before the grace period of the last due premium expires. Just as in the case of surrender values, the right to demand a paid up policy accrues only after the payment of premiums for a minimum number of years—usually two to three years. Further offices also prescribe a minimum amount below which paid-up-policies will not be granted. The exact amount of the paid-up-policy that may be granted in lieu of a policy depends on the Reserve value of the policy at the time of the cessation of premium. Thus the calculation of surrender value and paid-up-policy value are similar and the elementary principles involved in their calculation, will be explained in the next article on this subject.

Loan value of a policy is that amount which a life office is prepared to advance against that policy as a loan to the policyholder. Instead of surrendering the entire rights under the policy and receiving a cash value in lieu thereof, offices allow the policyholders to keep the policy in tact and also help them with a loan at moderate interest for nearly the full extent of the surrender value. The policyholder has to deposit the policy with the office as security and give a simple loan bond. The interest of the loan is to be paid along with the premiums and whenever the policy matures by death or survivance, the loan and the unpaid interest are deducted from the claim money and the balance paid. Usually 90 to 95 per cent. of the surrender value is thus advanced as policy loans. This is indeed a boon to the policyholders and as regards the company's position, it may be stated that this affords one of the very best investments for their funds.

Designs and Estimates Prepared for any Projects on Request.

SURRENDER, PAID-UP-POLICY, & LOAN VALUES.

Surrender value of a life insurance policy is that cash amount which the life office that has issued the policy, is prepared to pay the policyholder in return for the surrender of his policy thereby waiving all the future rights and benefits under the said policy. A policy acquires a surrender value only after the payment of the first few annual premiums, usually after two years and in some cases after three years. This is because the first premium is almost entirely spent by the offices in the heavy expenses involved in the procuration of New Business such as the initial large commission to the agents, medical fees, organisation, advertisement and other charges. Hence the first premium is deducted and only a portion of the subsequent premiums paid, is returned as surrender value. The development of life assurance during the past few decades, has been accompanied by a growing tendency towards liberality in the granting of surrender values and the grant of liberal and guaranteed surrender values has become one of the important selling advertisement points of life insurance policies. It may be noted here that this feature of life insurance companies has so rapidly developed in U.S.A. and Canada that it has almost become a vice there and life offices have suffered terribly during these depression years when there was an unprecedented demand for cash surrender values. I shall deal with this topic in more detail later in this article.

Persons demanding surrender values expect an amount at least equal to the premiums paid by him, though not with interest. Laymen who do not understand the principles of life assurance, are puzzled to note that they cannot even get back the premiums paid by them on surrendering their policies. They forget that throughout the currency of the policy until the time of surrender, the office has been liable to pay the full sum assured in the event of a claim. In other words, for whatever periods they have paid premiums they have had life assurance protection and this protection costs money. If fortunately they have not died during this period, others who were paying premiums along with them have died and their claims have to be met in full by the office. And these claims can be paid only with the help of the premiums received from those who survived. For, it should be remembered that life assurance is essentially co-operative and it is only by a large number of persons contributing in proportion to a common fund (which is invested and made to accumulate safely) that the great benefits of life assurance become possible. What really happens when a death claim arises is, the office pays the claim partly out of the reserves it has made against that policy and partly by the help of a portion of the current premiums paid by all the policyholders of the office.

The office premium *or* the actual published premium of a life office consists of a number of component parts, namely the amount required for the life assurance protection proper (which is based on the average mortality to be expected among the members and the assumed rate of interest which the office can earn on the invested premiums), a substantial addition to cover the working expenses of the office, a margin to cover any fluctuations in the income and outgo which may occur in the future, and another margin for providing future bonuses in case of with-profit policies. Persons who have paid a number of premiums and then demand surrender values forget that a substantial portion of the first component part and a portion of the other component parts have already been spent by the office. Strictly speaking when a person does not pay the premium within the days of grace, he has broken his part of the contract and the contract becomes null and void but life offices have from the very beginning taken a lenient view and are prepared to return the unutilised portion of the premiums. Another factor to be considered before a surrender value is granted is, it is usually supposed that only healthy lives surrender their policies and as such the office loses a valuable contributor thereby making the remaining group weaker and inferior. Consequently a reduction is necessary on this account.

The question of surrender value may also be looked at, from another point of view. Before proceeding further, it is essential that the reader should understand the difference between the Natural Premium method of life assurance and the Level Premium method of life assurance. In the former case the premium charged to the policyholder consists of only that amount of premium actually required to cover the risk of life for one year only at the age of entry plus some additional amount to cover the office expenses, etc. The premiums in this method are assessed year after year and naturally they will increase year after year as the mortality experienced at higher ages is much greater than that at lower ages. Thus if a policyholder wants to maintain his policy, he must be prepared to pay the assessed increasing premiums. Formerly this method of assurance was prevalent but now it has become almost extinct owing to the innumerable difficulties experienced by the office and the policyholders (particularly the older policyholders who have to pay disproportionately heavy premiums if they have been unlucky enough to live long). It is regrettable that some Indian life offices still continue to use this method. (This is by the way). Under the level premium method of life assurance, which is now universally prevalent, a uniform and level rate of premium is charged throughout the currency of the policy, the amount of which depends on the age at entry and the plan chosen. Once the policy is chosen the same amount of annual premium is payable throughout its currency though the chances of his dying become greater and greater (thereby increasing the risk covered by the office) as he grows older and older. As such it is but quite natural that the premiums charged are much higher, during the early years of the duration of the policy and much smaller during the later years of the policy.

The excess premium paid during the early years of the policy is accumulated at compound interest and is used to cover the additional risk involved during the later years, when the level premium by itself is not sufficient to provide the life assurance protection. The level office premium is thus divided into two parts, namely the premium required for life assurance protection throughout the currency of the policy including that required to provide the above mentioned reserve, and a comprehensive loading to provide for office expenses, adverse fluctuation in mortality and interest rate, and bonus loading for with-profit policies. The second part is entirely spent up year after year while in the first part very little is spent during the early years. The balance in the first part is invested very carefully and accumulated at compound interest. This accumulation constitutes the Reserve of a Policy and it is the combined Reserves of all the policies that go to make up the Life Fund which is held as a sacred trust by the life offices for the benefit of the policyholders and their representatives and heirs. The surrender value of a policy which the office is prepared to pay, comes only out of this reserve. Offices do not pay in full this reserve, but they deduct a portion of this accumulated reserve as compensation for the loss of a good policyholder and for the loss of future profits that may

(Continued on page 1091.)

Topical Extracts:

PROBLEMS OF THE GOLD STANDARD

DIFFICULTIES OF RESTORATION

Prof. CASSEL'S WARNING

Is there really any shortage of gold, and, if so, how far can this shortage be regarded as a factor which has contributed to the present crisis? Opinions on this subject are very divided. In some quarters people are inclined to answer both questions in the negative, referring to figures which point to a superfluity of gold rather than a shortage. Evidently there is some confusion in regard to the standard by which the adequacy of the supply of gold is to be estimated.

I have long since pointed out that the only way in which such a standard can be set up is to define the term "normal supply of gold". The supply of gold is normal when it increases at a uniform rate sufficient to maintain over a long period an unaltered level of commodity prices in terms of gold. Careful analysis shows that this requirement can be fulfilled only if the total world stock of gold increases at practically the same ratio as the general progress of the world economy.

According to estimates which I have previously published,[1] for the period 1850—1910, the supply of gold is normal if the total world stock of gold increases by 2.8 per cent. a year. As the annual loss of gold by consumption is estimated at 0.2 per cent. of the aggregate stock of gold at the beginning of the year, the output of new gold should correspond to 3 per cent. of this gold stock. Here we have a definite standard for "shortage" in the output of gold. The implication is, of course, that we continue to estimate the adequacy of the gold supply on the basis of a general economic progress corresponding to that of the above-mentioned period.

According to my calculations, the total world stock of gold at the end of 1930 amounted to 83 milliard gold marks.[2] A normal output of gold for 1931, at the rate of 3 per cent. of this amount, would thus have been 2,490 million gold marks. In reality, as we shall see, the output by no means reached this figure. At the end of 1931 the total gold stock amounted to 84.6 milliard marks. Thus a normal output of gold for 1932 would have been some 2,540 million marks. The normal output required for the present year is 2,595 million marks. Now, according to figures published by the Federal Reserve Bulletin,[3] the actual output of gold in 1931 was 1,927 million marks and in 1932 2,064 million marks. The output for the present year will, it seems, scarcely be larger than for 1932. The actual figures for production thus still lag far behind the normal. In other words, the output of gold, despite its remarkable increase during the years of crisis, is still inadequate. The annual shortage is round-about half a milliard marks. The "superfluity" of gold which people talk about is a myth: in reality we are still in a period of marked shortage in the actual world supply of gold.

In normal circumstances the gold available is used only in part for monetary purposes. The remainder is employed for industrial requirements or, as in India, is treasured. We can thus make a distinction between gold for monetary, and gold for non-monetary, requirements.

It is sometimes contended that, in estimating the adequacy of the gold supply, only the monetary gold stock ought to be taken into account. There would be some justification for this view if this gold stock could be precisely determined, and if there were a fixed line of demarcation between the monetary and the non-monetary stock of gold. This, however, does not happen to be the case. If, for some reason or other, there is an increased demand for gold for monetary purposes, gold may be withdrawn from the non-monetary stock to supply that demand. The statistics will then show an increase in the monetary stock of gold; but this increase is due to the greater demand, not to factors connected with the supply of gold. Thus, in estimating the sufficiency of the gold supply, the mere figures for the monetary stock of gold are liable to be misleading.

In previous discussions of this question it has been contended that the possibility of gold being transferred from one stock to another, in the way which I have suggested, is of no practical importance. In normal circumstances there may be some truth in this contention. But in periods of violent upheaval it does not hold good at all. The experiences of the last few years in fact clearly prove that under certain conditions gold may be transferred on a very large scale from the non-monetary to the monetary sphere. In such circumstances the method which I have adopted for estimating the supply of gold is distinctly preferable. It is the only method that throws any real light on the independent factors which determine the supply.

During the economic crisis of the last few years the central banks in the aggregate have accumulated gold on a very considerable scale. The figures given by the Federal Reserve Bulletin[1] for the gold reserves held by central banks and governments at the end of the stated years are as follows:—

1928	...	...	...	10.0	milliard dollars
1929	...	...	...	10.3	,, ,,
1930	...	...	...	10.9	,, ,,
1931	...	...	...	11.3	,, ,,
1932	...	...	...	11.9	,, ,,

The average rate of increase for the four years 1928—1932 was 4⅓ per cent. On the basis of a normal increase of 3 per cent. a year the gold reserves at the end of this period should have amounted to 11.26 milliard dollars. Actually, however, this amount was exceeded by about 640 million dollars. This means that the monetary stock of gold at the end of 1932 was more than 5 per cent. larger than it should have been on the basis of a normal increase since 1928. Though this is an appreciable excess, it shows that the prevailing notions regarding the superabundance of monetary gold are greatly exaggerated.

The total increase of the gold reserves during the stated period was 1,870 million dollars, whilst the output of gold during the same period, according to the figures of the Federal Reserve Bulletin, was not more than 1,786 million dollars. Thus the gold reserves not only absorbed all the gold produced, but, in addition, 84 million dollars more. Though this estimate is, of course, not quite exact, it, at any rate, seems to indicate that during this period more gold has been withdrawn from the non-monetary stock than has been supplied to it. The bulk of this gold has come from India, whose gold treasuries have been depleted of immense amounts during the crisis. Something similar has occurred in England, where numbers of old hoarded sovereigns and gold wares have been brought out and sold, thus serving to swell the world monetary gold stock.

This increase in the monetary gold stock is, however, not a primary factor in the supply of gold, but the result of an increased demand for gold. In the gold countries this demand has manifested itself in more and more exacting demands for "gold cover" and a perpetual lowering of the general level of prices, which is tantamount to a corresponding increase in the value of gold. In countries which have abandoned the gold standard the price of gold has risen by 50 per cent. or more. Great Britain, in spite of her abandonment of the gold standard, has actually come forward as a large purchaser of gold, which has been paid with treasury bills. The sums voted in 1932 and 1933 towards the Exchange Equalization Account, which has provided means for these purchases, far exceed the usual gold production of the world. Also other countries which have

Topical Extracts:

abandoned the gold standard have continued to accumulate gold, or, at any rate, have done their utmost to retain their existing stocks. Thus it cannot be denied that there has been an abnormally increased demand for monetary gold.

The fact that this demand has been supplied cannot be considered to have led to a superfluity of monetary gold, which would have brought about a rise of prices. To talk of "superfluity" in this connexion is quite unreasonable.

Had not gold flowed in from non-monetary reserves, the abnormally increased demand would merely have conduced to a further rise in the value of gold, and the general level of commodity prices would have fallen to a still lower level.

The fall in the level of commodity prices is proof positive that the world monetary gold stock, despite the influx from non-monetary reserves, has been inadequate to cope with the enormously increased demand.

By far the most important factor in the acute shortage of gold of the last few years is undoubtedly the unequal distribution of the world monetary gold stocks, which was the result of one-sided demands for payment on the part of certain creditor countries. In this respect the demand for reparations and other war debts has had a particularly disturbing effect. These demands were entirely at variance with the normal course of the world economy, and they were not set off by any willingness on the part of the creditor countries to receive a corresponding surplus of imported products from the debtor countries. The combined effect of these demands for war debts and of protectionism was that France and the United States accumulated gold on such a scale that an acute shortage of gold arose in the rest of the world. The consequence was a continuous and very sharp fall of prices. In these circumstances one country after the other was compelled to abandon the gold standard. The receiving countries, which undoubtedly possessed an abundance of gold, did not venture to utilize this superfluity for increasing the supply of means of payment. On the contrary, they were driven into a drastic process of deflation by the supposed necessity of lowering their domestic prices down to a level which would enable them to maintain their power of competition on the world market.

During the economic crisis which ensued it was quite natural that everybody should endeavour to maintain as liquid a position as possible. Not only private persons, but also commercial banks and central banks were seized with this craving for liquidity. But what is possible in this respect for individual persons, is not possible for the community at large. A general craving for liquidity in a country on a gold standard merely results in increasing the demand for gold. In fact we have seen that private persons have begun to hoard gold on a large scale, which has naturally conduced to increase the shortage of gold. Others have contented themselves with hoarding notes or keeping uncommonly large sight deposits in the banks. The result has been that the central banks have been exposed to extraordinary requirements, and have considered it necessary to increase their gold stock in an inordinate degree in order to be in a position to cope with any demand. The inevitable result of such cravings for liquidity for the world as a whole must be an extensive immobilization of gold and diminished liquidity

The problem with which we are now confronted is this: Is it possible for the future to protect the gold standard from the three perils which during the present crisis, as we have seen, have brought about the collapse of the entire system? These three perils are:—

1. The insufficiency of the production of gold.
2. An unequal distribution of gold due to demands on the part of the creditor countries.
3. An abnormal craving for liquidity resulting in an abnormal increase in the demand for gold.

The insufficiency of the production of gold, so far as we can now see, can never be overcome. The required annual output of gold increases at the same pace as general economic progress. If the shortage of gold is not to be permitted to retard this advance, the world should still be able to increase its rate of progress by 3 per cent. a year. There are, however, no prospects at present of increasing the output of gold at this rate. The actual shortage in the world gold supply can be met only by a systematic and successive restriction in the demand for monetary gold.

The only real guarantee against a disatrous **disproportion of gold** lies in the cancelling of all war debts, the maintenance of peace between the nations and of such liberty in international trade as is necessary in order to enable the international machinery of payments to work satisfactorily. In this respect it is especially important that the creditor countries should show willingness to receive a sufficient amount of goods from debtor countries.

To prevent the rise of an **abnormal craving for liquidity** is not easy. The mere fact that the monetary system is based on gold, and that the accumulation of a stock of gold seems to afford an opportunity for maintaining a liquid position evidently stimulates this craving for liquidity. This being so, we must seriously discuss the question whether it would not actually be an advantage if such artificial opportunities for the accumulation of funds did not exist at all.

In point of fact public opinion in the world seems already to have advanced far in this direction. In many countries drastic measures are being adopted to prevent private hoarding of gold. Such hoarding is declared to be at variance with the interests of the community which, it is considered, demand that all monetary gold shall go to the central bank. Mr. Trip, President of the Nederlands Bank and Chairman of the committee which framed the programme for the London Conference, has sketched a plan for a gold standard system in which private persons are to be debarred from possessing monetary stocks of gold.[1] Such a system is, of course, open to discussion; but it should be realized that this is something essentially different from the pre-war gold standard system, and especially that the value of gold under the new conditions would no longer be determined on the same principles as before. In fact the responsibility for the value of gold in the projected system would fall entirely on the central banks. It seems impossible, however, to take up such a system for serious consideration unless the central banks are prepared to enter into close co-operation with a view to a rational stabilization of the value of gold.

The craving for liquidity cannot be completely controlled by debarring private persons from the possession of gold. We have already indicated that the craving for liquidity on the part of private persons may lead to similar endeavours on the part of the central banks, and thus to a scramble between the latter for the available gold reserves, resulting in a ruinous rise in the value of gold. For the present it is an open question whether it will really be possible to create the necessary guarantees against this menace to the stability and existence of the gold standard.

The general distrust of paper currencies has entailed an under-valuation of the latter in relation to their internal purchasing power. This under-valuation is tantamount to an over-valuation of the gold currencies. From the point of view of commercial policy, this over-valuation puts the gold countries in an intolerable position. If they endeavour to maintain their power of competition by a continued process of deflation, the result will merely be a further rise in the international valuation of their currencies. The tendency towards a rise in the rates of exchange on the gold countries, which has manifested itself during the last two months, may eventually drive those countries off the gold standard. The large gold reserves which they have accumulated will then be of no avail: on the contrary, they will actually tend to a further over-valuation of their currencies. Those countries which are now struggling for the preservation of the gold standard should rather direct their efforts to exporting gold with a view to reducing the value of gold. President Roosevelt's keen interest in maintaining his country's stock of gold, at any rate, scarcely conduces to facilitate the restoration of an international gold standard system.

When we speak of the restoration of the gold standard, it must be borne in mind that the cardinal feature in the entire gold standard system is confidence. Owing to the action taken by the states during the last few years this confidence has been shattered. A number of countries suddenly abandoned the gold standard, because they supposed that they were compelled so to do owing to shortage of gold. What is more, the United States have taken the same step without having any shortage of gold, simply because it seemed necessary to check the deflation and to bring about a rise in the general level of commodity prices. Many countries have refused to recognize even the most expressly worded gold clauses in existing obligations. After this, how do people suppose that it is possible to restore confidence in a new gold standard? It is actually being proposed that the countries should at first merely fix provisional gold parities in order afterwards to adjust them so far as this was found desirable for reasons of commercial policy. Is there anybody who seriously supposes that such a system would inspire confidence or deter international speculation from operations aiming at the exploitation of anticipated changes in the parities?

If an established state of public security has once been shattered, we must reckon with the probability that it will take generations to build up a new one which will inspire complete confidence.

The observations I have set forth here are not intended to combat the gold standard or the efforts which are being made to restore an international gold standard system. But I have thought it desirable to bring into clear relief the real conditions under which these efforts could count on success. Those who earnestly desire to work for the restoration of the gold standard should know what their programme demands and beware of taking their task too lightly.

---

[1] Annual Report of the Netherlands Bank 1932—33.

STATISTICAL INFORMATION

INDIA'S TRADE IN SIX MONTHS.

During the six months ended September, 1933, the value of the imports decreased, as compared with the corresponding period of 1932, by Rs. 15 crores or 22 per cent. and amounted to Rs. 55 crores and the total exports, including re-exports, rose by Rs. 10 crores or 17 per cent. to Rs. 73 crores. The exports of Indian merchandise showed an increase of Rs. 10 crores or 17 per cent. and the re-exports also showed an increase of Rs. 13 lakhs or 9 per cent. The grand total of imports, exports and re-exports amounted to Rs. 128 crores as against Rs. 133 crores, a decrease of Rs. 5 crores or 4 per cent.

Imports of treasure (private and Government) decreased by Rs. 99 lakhs to Rs. 86 lakhs. Gold bullion increased by Rs. 2 lakhs to Rs. 39 lakhs, while sovereigns and other British gold coin decreased by Rs. 7 lakhs to Rs. 15 lakhs, and other coined gold fell by Rs. 12,000 to Rs. 1,29,000. The value of silver imported decreased by Rs. 94 lakhs to Rs. 28 lakhs, and of currency notes by Rs. 51,000 to Rs. 2¼ lakhs. Exports of treasure increased by Rs. 2,03 lakhs to Rs. 33,21 lakhs. Exports of gold alone amounted to Rs. 28,16 lakhs as against Rs. 29,66 lakhs in 1932.

India's visible balance of trade in merchandise and treasure during the six months, April to September, 1931, 1932 and 1933, is shown in the following table. The figures are arrived at by combining the balances of transactions in (1) private merchandise and (2) treasure (private account). The balance of remittances of funds is also shown with details at the end of this table. In these balances the sign plus (+) indicates net export and minus (−) net import.

	Six Months, Apl. to September		
	1931 (lakhs) Rs.	1932 (lakhs) Rs.	1933 (lakhs) Rs.
Exports of Indian merchandise (private)	+75,22	+60,72	+71,07
Re-exports of Foreign merchandise (private)	+2,50	+1,48	+1,61
Imports of Foreign merchandise (private)	−65,88 (*a*)	−70,80 (*a*)	−55,35 (*a*)
Balance of trade in merchandise (private)	+12,14	−8,60	+17,33
Gold (private)*	+40	+29,06	+27,61
Silver (private)*	−1,62	−72	+15
Currency Notes (private) ...	+1	+4	+9
Balance of transactions in treasure (private)*	−1,21	+28,35	+27,85
Total visible balance of trade ...	+10,93	+19,75	+45,18
Council Bills, purchases of Sterling and other Government remittances to the United Kingdom (*b*)	...	−13,21	−24,65
Sterling transfers on London sold in India	+18,97	...	...
Transfers of Government Securities	−4	−5	+9
Interest Drafts on India in respect of Government of India Securities	−16	−16	−20

In the month of September, 1933, there were 187† arrivals and 241‡ sailings with cargoes in and from India, as against 210 and 220 respectively in September, 1932.

The tonnage (net register tonnage) of vessels entered with cargoes at ports in British India from foreign countries and British Possessions during the six months ended September, 1933, amounted to 3,490,368 and the tonnage (net register tonnage) cleared to 3,797,578 as against 3,352,388 tons entered and 3,499,111 tons cleared during the corresponding periods of 1932.

(*a*) Exclusive of the value of Railway materials (Rs. 48 lakhs, Rs. 12 lakhs and Rs. 11 lakhs in the six months, April to September, 1931, 1932 and 1933, respectively), imported direct by State Railways working under Company management which was not paid for in the ordinary way and not, therefore, taken into account in arriving at the balance of trade.

(*b*) This head includes, in addition to Council Bills, (1) Sterling purchases in India and (2) payments in India to Local Bodies, etc., against proceeds of sterling loans floated by them in London and taken over by the Secretary of State.

* These exclude transactions which do not enter into the balance of trade.

† The provincial details are as follows:—Bengal 13, Bombay 43, Sind 32, Madras 72, and Burma 27.

‡ The provincial details are as follows:—Bengal 36, Bombay, 45, Sind 37, Madras 86, and Burma 37.

FOREIGN TRADE OF BOMBAY

The following statement shows the value of imports and exports of the principal articles of foreign trade of the Bombay Presidency for six months from 1st April to 30th September, 1933, compared with the corresponding period of the preceding year:—

	Six months from 1st April, to 30th September,

ALLEPPEY'S EXPORT TRADE

The trade returns furnished by the Allepey Chamber of Commerce for the month of August give interesting information. Under most of the heads exports show a fall from the figures of last year. Coir yarn exported last year was 43,957 cwts., which has gone down to a little over half the quantity this year, the actual quantity being 23,096 cwts. The import into every country, which is a customer to the Travancore yarn, has been substantially reduced, excepting the United Kingdom, to which 7,489 cwts. was exported during the current year as against 5,302 cwts. last year. The export of matting has maintained a steady advance from 918,450 yds. last year to 1,107,459 yds. this year, while the quantity exported to the United Kingdom was also more, *i.e.*, from 755,634 yds. to 951,406 yds. Belgium, Holland and Denmark imported pretty good quantities this year as against *nil* last year. America also had larger shipments sent to her this year, *i.e.*, from 15,350 yds. to 25,850 yds. Australia's demand was perceptibly less from 57,206 yds. to 38,875 yds. New Zealand kept the same quantity. The excess of export to China over last year was 3,500 yds. The Straits imported 1,250 yds. against 100 yds., in 1932. Bombay required this year only something less than half of its last year's imports. The total quantity of mats exported seems to be stationery. Though the United Kingdom imported 16,115 as against 11,083 yds. in 1932, this fall was heavy in America where the decline was from 8,044 yds. to 3,574 yds. The decrease in the export of tea was striking from 82,133 lb. to 4,214 lb. The United Kingdom, Australia and Ceylon never imported Travancore tea, while Bombay alone went in for 4,214 lb. No rubber seems to have been exported in 1932, while in 1933, Ceylon alone imported 35,760 lb. from Travancore.

THE INDIAN REVENUES

The Indian Revenues for the six months of April to September, 1933, contrast thus with the corresponding period of two previous years (000's omitted):—

	1931-32 Rs.	1932-33 Rs.	1933-34 Rs.
Land Revenues	16,44,09	14,51,27	14,79,25
Salt ,, ...	3,23,18	5,83,44	3,88,97
Stamps ,, ...	5,78,73	6,17,37	6,06,79
Excise ,, ...	6,65,58	6,58,07	6,75,84
Customs Receipts	21,00,57	25,35,40	23,11,90
Income-taxes (including Super-taxes and Excess Profits Duty)	5,04,12	5,92,09	5,03,99
Forest Revenues	1,19,10	1,16,64	1,09,96
Opium	62,18	69,45	55,52

RAILWAY EARNINGS

The total approximate gross earnings of all State-owned railways for the week ending October 7 last amount-

ed to Rs. 153 lakhs, which is two lakhs more than the figures for the previous week and eight lakhs less than the figures for the corresponding week of the previous year and the same for the corresponding week in 1931-32. The total approximate gross earnings from April 1 to October 7 last amounted to Rs. 42.07 crores or Rs. 73 lakhs more than the figures for the corresponding period of the previous year and Rs. 14 lakhs less than the corresponding period of 1931-32.

STATE RAILWAY EXPENSES

The following are the approximate ordinary working expenses including suspense but excluding appropriation to and from depreciation fund of the State-owned railways from April 1 to August 31, 1933, as compared with the actuals of the corresponding period of last year:—

Railways.	Up to Aug. 31, 1932.	Up to Aug. 31, 1933.	Increase (+) or Decrease (−) with the figures for the previous as compared year.

FINANCES OF KARACHI PORT

Referring to the financial position of Karachi Port during 1932-33, the annual administration Report of the Trust points out that the ordinary Revenue receipts in the year (including Rs. 67,300 on account of withdrawal of part of the surplus in the Sinking Funds) were Rs. 59,22,000 as against Rs. 63,67,000 in the previous year. A fall of about 7 per cent.

There were special receipts during the year amounting to Rs. 82,800.

The Revenue Account expenditure on ordinary items was Rs. 62,91,000 as against Rs. 71,09,000 in the previous year. A fall of about 12 per cent.

The financial result was a loss on the year's working of Rs. 2,86,000 (taking into account the special receipts of Rs. 82,800) as against a loss of Rs. 9,79,000 in the previous year. This loss was met from the Revenue Reserve account which was credited with Rs. 2,01,000, the bonus on conversion of certain Government Securities which it held, and which thereafter stands at Rs. 43,28,000, or only Rs. 37,000 less than last year.

To meet the need for economy, capital expenditure was reduced to a minimum and only Rs. 3,50,000 new money was borrowed in order to round off works previously undertaken. At the close of the year, the total capital debt was Rs. 4,28,59,000. The sinking funds for this debt stood at Rs. 2,06,96,000 of which Rs. 26,000 were in cash and the balance of Rs. 2,06,70,000 in investments in public securities (whose market value, as on the 31st March, 1933, was about Rs. 2,09,14,000) against Rs. 1,75,68,000 theoretically required. The improvement rate assumed for these sinking funds was 3 per cent. prior to 1929 and 4½ per cent. thereafter. Owing to the widespread recent fall in yields, the improvement rate has been lowered to 4 per cent. as from 1st April, 1933. No difficulty has been found in earning these rates; in fact the sinking funds show steadily increasing surpluses over the calculated amounts.

FINANCES OF ADEN PORT

The Administration Report of the Aden Port Trust for the year ending 31st March, 1933, begins by observing that vessels of greater draft can be handled by working the tides. The mean range of ordinary spring tides is 6.7 feet.

The financial year of the Board ends on the 31st March, and the following statement gives the principal statistics relative to the trade and shipping of the Port for 1931-32 and 1932-33:—

	1930-31	1931-32	1932-33
1. Number of merchant steamers excluding Government vessels ...	1,577	1,483	1,461
2. Tonnage of —do—	5,805,529	5,813,623	6,092,187
3. Number of sailing vessels and Dhows	1,090	1,074	1,194
4. Tonnage of —do—	32,036	34,873	37,409
5. Number of Government and Admiralty vessels ...	87	104	68
6. Tonnage of —do—	193,713	205,840	150,583
7. Total tonnage of all vessels ...	6,031,278	6,054,336	6,280,179
	Rs.	Rs.	Rs.
8. Receipts from pilotage of vessels ...	1,65,139	1,63,523	1,29,988
9. —do— Port Fund	4,20,981	3,96,115	4,00,537
10. —do— Wharves ...	5,75,581	5,86,496	5,61,849
11. —do— Other heads	2,65,197	2,22,759	2,13,116
12. Instalments of Loan raised for Dredging	5,00,000	...	...
13. Sinking Fund ...	40,298	40,298	26,864
14. Total Receipts ...	19,67,196	14,09,191	13,32,354
15. Expenditure on Pilotage	1,25,072	1,27,612	1,22,109
16. —do— Port maintenance	2,78,743	2,65,416	2,53,768
17. —do— Wharves ...	1,18,159	1,08,295	1,05,903
18. —do— Other heads	5,29,038	3,22,302	4,44,929
19. —do— Dredging ...	13,69,566	...	...
20. —do— Sinking Fund	40,298	40,298	26,864
21. Repayment of Loan	...	20,00,000	2,00,000
22. Total Expenditure ...	24,60,876	10,63,923	11,53,573
23. Balance at the end of year ...	10,11,681	13,56,949	15,35,730
*24. Value of Imports excluding Government Stores and Treasure ...	6,25,71,901	5,62,94,814	5,46,65,576
*25. —do—Exports—do—	4,31,26,841	3,76,62,829	3,47,72,647
26. Total Value of Trade	10,56,98,742	9,39,57,643	8,94,38,223

Despite the world wide depression the financial position of the Trust continued to be satisfactory during the year, although the balance of the surtax on tolls, rates and charges imposed to meet the high costs during the war and early post-war years was finally abolished on 22nd August, 1932.

* Note this does not include cargo in transit.

Excluding vessels of under 200 tons engaged in local trade, the number of merchant vessels over 200 tons that have used the Port during 1931-32 and 1932-33 has been—

Year.	Paying high scale of dues. No.	Paying high scale of dues. Tonnage.	Paying lower scale of dues. No.	Paying lower scale of dues. Tonnage.
1931-32 ...	1109	4,592,168	315	1,213,592
1932-33 ...	1070	4,509,885	352	1,576,244

Year.	No.	Total. Tonnage.	Average net tonnage per vessel. Tons.
1931-32 ...	1424	5,804,760	4,147
1931-33 ...	1422	6,086,129	4,279

391 vessels with a recorded draft of 26 feet and upwards entered the Port as against 310 during the previous year.

Out of 52 deep draft steamers which visited the Port, 16 had a draft of 29 feet, 17 over 29 feet, 4 of 30 feet, 7 over 30 feet, 3 of 31 feet, 3 over 31 feet and 2 over 32 feet.

INCOME-TAX EXPERT

thoroughly conversant with procedure for claims against Income Tax authorities and who can advise on Returns, etc. can be consulted by gentlemen home on leave from India.

Extracts from Directors' Report:

Report—For the year ended 31st July, 1933.

Profit and Loss Account, after having provided for Reserve for Income Tax, shows a credit balance of Rs. 38,018-4-7.

It is proposed to allocate this amount as follows:—Declare a Dividend of 7½ per cent. free of Income Tax Rs. 32,250, carry forward to current year Rs. 5,768-4-7, total Rs. 38,018-4-7.

The necessary arrangements have been made with balers to pack during the season.—A. M. Bett, F. S. Harrison, N. Lindsay, Directors. Calcutta, 13th October, 1933.

MURREE BREWERY CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	18,00,000	Block (net) ...	15,56,728
Reserves ...	18,18,518	Stocks ...	4,46,026
Debts ...	4,74,737	Stores & Spares ...	1,15,918
Profit & Loss ...	1,87,579	Outstandings ...	2,93,304
		Investments ...	15,73,205
		Cash & Deposits ...	2,95,653
Total ...	42,80,834	Total ...	42,80,834

Extracts from Directors' Report:

Report—As at the 31st August, 1933.

The profit for the year amounts to Rs. 2,75,468-6-1, to which has to be added the balance brought forward from the previous year, Rs. 20,110-4-5, total Rs. 2,95,578-10-6, Less the interim dividend at 6 per cent. paid in June, 1933, Rs. 1,08,000, making available for distribution, Rs. 1,87,578-10-6; from this your Directors recommend a final dividend of 6 per cent, free of income tax, and a bonus of 3 per cent., making 15 per cent. for the year, Rs. 1,62,000, balance Rs. 25,578-10-6; from this has to be deducted the sum of Rs. 5,400 being the extra Direcors' Fees in accordance with Article 47 of the Articles of Association of the Company, leaving to be carried forward Rs. 20,178-10-6.

It will be noted that included in the above profit there is an item of Rs. 11,005-2-4, which was included in the amount reserved for Income Tax in the previous year, but was found to be in excess of requirements. There is also a further item of Rs. 48,123-0-2 being surplus profits on sale of investments. It will be noted from the Balance Sheet that there have been many changes in the investments during the year, from which changes your Company has realised considerable profits. Part of these profits have been allocated to Reserve to bring the Reserve Accounts up to Rs. 18,00,000, and the balance credited to Profit and Loss Account. The Investments Reserves are at present "free" Reserves, as the market value of the investments is considerably in excess of the book value.

Your Directors consider that, as the Reserve Accounts standing at Rs. 18,00,000 are equivalent to the Company's capital, this puts your Company in an exceptionally strong position.

Your Directors trust that you will be pleased with the year's results.

There has been a further drop in bulk beer sales as compared with the previous year, but bottle beer sales have remained pratically stationary.

This year, as last, we hold a large stock of barley and malt at prices well below normal though somewhat higher than last year, and our commitments for new barley are at a slightly higher figure.

The price of hops of the 1933 crops has gone up enormously, but fortunately we hold a fairly large proportion of our year's requirements at last year's prices.

The results of the Distillery working are much batter than for the previous year.—Geo. Duncan, E. A. Smedley, E. S. Millar, Directors.

PORT CANNING AND LAND IMPROVEMENT CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	60,00,000	Block ...	73,37,837
Reserve ...	8,34,049	Stock in trade ...	470
Debts ...	11,93,045	Stores ...	2,029
Profit & Loss ...	1,53,060	Outstandings ...	8,07,200
		Cash ...	32,528
Total ...	81,80,154	Total ...	81,80,154

Extracts from Director's Report:

Report—For the year ending 30th April, 1933.

The Directors regret to point out that the past Season was unfavourable for cultivation, as there were excessive rains at a critical time *viz.* when the Rice Plants were flowering, which caused damage to the Crop. Added to this the world-wide economic depression and the heavy fall in the prices of food-stuffs, especially of Rice, caused Paddy prices to continue their downward course, thus further aggravating the unfavourable position into which our Ryots have been gradually drifting. For four consecutive years adverse economic conditions and declining Paddy prices have placed a great strain upon the resources of your Company, and many of our tenants during the year under review have been reduced to an almost hopeless condition.

Under the above trying circumstances the realization of our dues has been very difficult, as will be evident from the Collections this year, which amounted to Rs. 5,56,000, against Rs. 6,55,000 last year and Rs. 7,47,000 in 1929, which was about the average before the abnormal drop in food-stuff prices took place.

Owing to the above narrated facts the debts due from our Ryots have reached the unprecedented figure of Rs. 8,06,000, against Rs. 6,58,000 standing in our books at the end of last year, and against Rs. 4,80,000 outstanding in 1929. This large increase in outstandings cannot be viewed with anything but anxiety in the absence of any immediate prospects of a rise in Paddy prices. In these circumstances your Directors have deemed it advisable to provide for the Ryots' Outstanding Doubtful Debt Fund more fully than in the past as an adequate provision against contingencies which may arise in future.

The Salamy Collections during the year were Rs. 1,952, which amount has been placed to the credit of Reserve Fund as usual.

The following amounts have been transferred from Profit and Loss Account to the credit of the undermentioned Accounts:—Rs. 55,000 to Reserve Fund, Rs. 1,50,000 to Ryots' Outstanding Doubtful Debt Fund, Rs. 2,000 to Furniture and Plant Account for depreciation.

With the above appropriation the Profit and Loss Account shows a credit balance of Rs. 1,53,060-6-9 out of which your Directors recommend that a Dividend at the rate of Rs. 25 per share be sanctioned, absorbing Rs. 1,50,000, and that the Balance of Rs. 3,060-6-9 be carried forward to next year's Account.—H. H. Sawyer, A. Pether, Ishwardas Lukhmidas, Ranchordas Vijbhucandas Mehta, Jehangir Framji Batliboi, Manecksha N. Pochkhanawalla, Directors, Bombay, 10th October, 1933.

WORLD OF INDIAN FINANCE

Calcutta, November 10.

There has been no appreciable change in money conditions. The market lost only Rs. 10¾ lakhs on account of Treasury Bills operations by way of excess of sales over maturities. The Treasury Bills position has shown a mild change for the better from the point of view of the readiness of the market to invest therein. The amounts on offer during the weekly auctions have shown a steady increase from Rs. 165.75 lakhs on October 24 to Rs. 182 lakhs on October 31. The largest change has been in the auctions of the week under review, no less than Rs. 255½ lakhs being offered to the Government. The sales of intermediates, however, have decreased from Rs. 32 lakhs in the last week to Rs. 10¾ lakhs during the week covered by the communique of the Controller of the Currency. From this one might be led to suppose that the market is still feeling an aversion for Treasury Bills. But it has to be noted that during the last three weeks the average rate of accepted tenders has been showing a steady and rapid improvement from the standpoint of the investor. From Re. 1-7-8 it has gone up to Re. 1-9-10 and to Re. 1-11-2 per cent. This means that investment in intermediates is less remunerative than investment in the auction sales of the ensuing week. The market, therefore, would naturally prefer to await the issue of the auctions rather than take up Bills on any large scale in intermediates. If allowance is made for this factor, it should be easy to recognise that there is increasing response to Treasury Bills offer owing to the consistent rise in the discount rates. There is as yet no apprehension that the revival of trade would interfere with an improvement in the sales of Treasury Bills by the Government. The fact that only 45 per cent. was allotted for tenders at Rs. 99-9 at the last auction indicates that the market is prepared to lend at 1¼ per cent. till the beginning of February. As three months' Bills sold in November mature in February, anticipations of a belated trade demand should have the effect of impeding the large inflow of morket funds into Treasury Bills. In the present position when the talk of a trade revival is gaining strength the tactics which Government should adopt would be to stick to the rate till market shows by large offers at lower rates that it expects an yield of 2 per cent on Treasury Bills.

From the forthcoming survey of the position, it would seem that in the Ways and Means programme the Government could not be well advised to bank on any large offtake of Treasury Bills by the Government as only two more auctions come in during the rest of the month, making up sales of to Rs. 3 crores and there are about Rs. 8 crores of maturities during the remaining weeks of November. According to the last statement of the Imperial Bank of India, Ways and Means Advances to the Government of India have been further reduced by Rs. ½ crore to Rs. 6 crores. But considering the poorer prospect of sales of Bills and the heavy maturities, it may be said that the only factor thot can prevent an increase in Ways and Means Advances is sales of Intermediate Treasury Bills. As we have said earlier, intimate understanding between the market and the Government as to the rate at which the necessary amounts would be forthcoming is yet to be established. In the absence of such understanding, and with rates of the weekly auctions showing a mild increase, which is itself unhelpful for large soles of intermediates, there can be no big increase in Treasury Bills sales. From this point of view it is well that the exchange market has shown a weakness during the week, as otherwise the market would be offering more sterling and purchases of sterling by Governmtnt would mean a larger gap between needs and resources in the Ways and Means position of the Government.

The securities market has shown an improvement over the last week. 3½ per cent. paper has risen from Rs. 82-13 on Saturday last to Rs. 83-2 after touching Rs. 83-14 on the 8th instant. As compared with the opening quotation of last Friday, the new 3½ per cent 1947-50 loan has gone up by Re. 1. The improvement is attributable to the new Sterling Loan. Even before the announcement of its terms, rumours of this issue were current in Bombay towards last week-end. But the pace of the rise in paper was a little everdone by a few shrewd professional operators with a view to taking profits. The favourable reception of the sterling loan did little to bring

about the much-looked for rise in Rupee securities, because those who had operated in shrewd anticipation of the issue had begun to take profit at an early stage and the sales thus occasioned created a degree of ease in the market. Lack of confidence still dominates the market and the uncertainty of events which is depressing the rest of the world has also cast its shadow on the Indian markets. The outlook as such still continues to be bearish; and all that we can claim for the success of the Sterling Loan is that it has stopped the tendency for bear raids on the market on a large scale which, in the present temper of the market would have been the case, had the loan proved to be of more unfavourable terms or had proved a failure.

The success of the loan has thus had only a negative advantage from the standpoint of the Indian giltedge market. With the extremtly easy money conditions there should be, normally speaking, a strength in giltedge. On the other hand, whether there be a trade demand or not in the so-called busy season, the psychology of the market is to make use of that factor to remain quiescent, hoping to avail of any unforeseen opportunity to get better return on the unemployed money. In these conditions it is idle to look for any sharp rise in giltedge prices, unless some support is given by interested parties to stimulate the activity in the market. The rise in the new 3½ per cent. 1947-50 Loan is a pleasing factor in the events of the week. It is due partly to sentiment and partly to investment enquiry. But the gap between the issue price and the current market price is still yawning wide. As we pointed out on a former occasion, the improvement in its price is still dependent on the lack of supplies on the other scrips. This is by no means a healthy feature, but it is certain that unless and until this loan is sought as an investment, there is little hope of a heady rise.

The failure of the sterling loan to stimulate adequately the price of Indian giltedge stocks may be seen from the fact that while 3½ per cent. India sterling paper is quoting £87½, 3½ per cent. Rupee paper is still hesitant at Rs. 83⅛. The disparity of over 4 points against Rupee stock is inconsistent with the Government's plea that higher terms have to be offered in London than need be the case in India on new borrowings. The fact is that Sir George Schuster's credit policy commands no confidence amongst domestic investors and that bullish sentiment is to-day conspicious by its absence. The gravity of the position will be realised when it is pointed out that firstly reports from London have been consistently cheerful and have had no effect on Rupee securities and that secondly, the Imperial Bank has presumably purchased large blocks of securities without being able to cause any upward movement in prices. The latest return of the Bank suggests that purchases on quite a heavy scale had been made. The support from London developments and the support from the Imperial Bank have thus proved unavailing. Between January 1932 and March 1933 the giltedge market was marching from strength to strength. Mis-handling of the situation on the occasion of the last Rupee loan and the issue of a 4 per cent Sterling Loan caussd a headlong decline and nothing would seem to put heart in a demoralistd market.

So long as Sir George Schuster does not realise the necessity for doing something striking and arresting to capture the imagination of investors, the prospects of the giltedge market are far from cheery. Sir George can at least do one thing. Whatever may be the final decision on the question of compulsory deposits, he might make immediate announcement that the Reserve Bank will be ready to accept compulsory deposits in cash or securities at the option of scheduled banks. In the case of securities, the transaction should be considered one of outright sale at quotations prevalent on the particular date. The Bank in question would be given credit in cash for such sale proceeds. We do not see what possible objection there can be to this course. In a letter addressed to us by the Hon'ble Mr. Taylor on our comments on the Reserve Bank, he points out that the Reserve Bank would, in all likelihood, buy securities from the market, if and when scheduled banks have to sell securities. If so why should sales be done on the market? Why not avoid all the complications and upheavals which large sales would cause? The solution we have suggested should suit member banks, the Reserve Bank and, above all, the giltedge market. The announcement on these lines would go a long way to revitalise Government securities.

The new sterling loan is discussed in all its aspects in the Editorial section of this issue. Here, it may be mentioned that though there were rumours of a fresh issue, they were discounted in certain quarters on the ground that the Home Treasury balances of the Government of India were very ample to meet the maturing obligations in December of the 6 per cent. Bonds 1933-34, and that the remittances of the Government of India were satisfactory notwithstanding the temporary lull of the last three weeks. The Secretary of State and his advisers have apparently gauged the situation with reference to the

Madras, Novr. 9.

The exchange market witnessed another dull week and very little interest was shown either by importers or exporters. Banks were sellers at 1s. 5 31/32., right up to the end of the year while some business was done with Bombay banks at this rate. Forward T.T. is quoted 1s. 5 15/16d., from January to March and 1s. 5 29/32d., May to June. Three months Bills quoted 1/6 and 1/8 but there were no bills offering. Call money quoted 1 per cent.

The implications of Mr. Roosevelt's gold purchase policy to the international exchanges have been somewhat clarified during the course of this week. One would have thought at the outset that, whatever the spirit behind the policy, there is a degree of aggressiveness in it, which might lead to further complications in the political and economic relations of the United States with the rest of the foreign countries. In the first place large scale purchases of gold by America at rates calculated to depress the dollar further in terms of gold currencies would set in motion forces that might ultimately tend to drive the gold standard countries off gold and render the position of sterling more and more difficult. Secondly, in view of the uncertainly attaching to the value of the dollar in the future and the somewhat strained relations that might result from the pursuit of the gold purchase policy, the discussions, that were then going on between the British representatives and the American Administration regarding war debts, would be complicated and an early or easy settlement rendered altogether hopeless. If the same degree of uncertainty should attach to the December 15 payment as on the last two occasions, with a little more of international bitterness thrown in, the consequences of such a development are easily forseeable. Thirdly, we have learnt to think during the recent months that the policy of the British monetary authorities in respect of exchange value of sterling have been put on an intelligible basis; and to subject sterling again to grave instability is by no means a welcome prospect either for British or for world trade.

In both these respects, the news of the week has tended to give a degree of hope. Early in the week, it was definitely stated that the gold purchase policy does not involve any sterling-dollar duel. The American Administration was represented as waiting for the British reply to the Recovery Administration's overtures for currency co-operation. Though nothing is known further about this important question of the monetary *rapproachement* between Great Britain and America, it may be presumed that the fear of a currency and exchange war between the two countries was exaggerated and that it is possible that the two countries would, if they have not already, come to an agreement, as to the basis on which each could pursue its own policy.

It would appear that the former attitude of European nations to America's gold purchase policy is to tolerate the test purchases so long as fluctuations keep within reasonable bounds. On November 1st, purchases of gold by America were impossible as the French banks were closed on the occasion of All-Saints Day. It is also learnt that, so far as the London market was concerned there was no trace of American buying of gold, as it has evidently been possible to ascertain that all the gold that was offering in the market was taken up by Continental purchasers. The conjecture has also been hazarded that America has been buying francs in the London market and utilising the francs so obtained for the purchase of gold from the Bank of France. At one time there were reports that the Bank of England would be asked to act as the gold purchasing agent of the American Administration. But such reports have been denied since by responsible quarters. And the Administration is represented as hoping that Britain will adopt a policy of neutrality, to the point of even offering their co-operation, should the depreciation of the dollar be within small limits and the purchase of gold of small proportions.

It is interesting to note the machinery utilised for the purchase of gold. The announcement that gold purchases would be made abroad was first made in a broadcast speech by Mr. Jesse Jones, Chairman of the Reconstruction Finance Corporation. He said that the Corporation had authorised the Federal Reserve Bank of New York to dispose of the R. F. C. notes and to take in payment foreign gold imported thereafter. Mr. Jones added that the Federal Reserve Bank would be the Government's sole agent and the price to be paid would be announced in the morning. Our Overseas columns this week describe in detail the price announced during Air Mail week in respect of the purchase of newly mined gold within America and their relation to the dollar franc rate. It is also pointed out that the sterling dollar rate ruling at the time was not in agreement with what might be the dollar rate, if the London gold price and the dollar price of gold offered in America by the Re-Construction Finance Corporation were taken into account. These misfits have continued since; and, so far as the London market is concerned, the premium forthcoming over the London-Paris rate is an unsteady factor which defies any accurate calculation. Though a fortnight has passed since Mr. Roosevelt first announced the new policy, the purchase of gold abroad has progressed only at a snail's pace. According to a New York cable dated November 3rd, the United States was purchasing gold abroad and the Federal Reserve Bank secretly bought in small amounts in London and Paris on the following day the gold price was 32.57 dollars per ounce. It is also reported that the United States bought 10,000,000 francs gold from the Bank of France on November 2nd.

The weight of the gold policy has been lifted off the question of the war debts also. It would no doubt be futile to deny that but for the declaration of gold purchases, both parties to the negotiations could have carried on the discussions in a more hopeful spirit. But what is of immediate importance is that the question of the December 15, payment should not be allowed to create an atmosphere not only of uncertainly but even of hostility between the two principal nations of the world. It is well, therefore, that Great Britain and America have agreed on a token payment which will, on the one hand, leave the British claims to reduction without prejudice and on the other, enable America to consider that Britain is not in default. In other words, an arrangement has been come to by which both the nations have been able to save their faces. It is interesting that on the present occasion the payment is to be made in dollars. It will be remembred that on the last occasion the token payment was made in silver in pursuance of the amendment to the Farm Act that war debts payment might be accepted in silver at the price of 50 cents an ounce. A sequel to the token payment in silver is now reported. It is stated that the American Treasury will shortly issue 11 million dollars worth of silver certificates backed by silver received as war debt payment for the instalment due last June. The process of assaying the metal has just been completed. In spite of the general fervour for inflation officials have been anxious to deny that the silver issued is a measure of inflation, on the ground that the certificates should be used in the normal course of business to replace other forms of currency sent to the authorities for redemption. As regards the instalment due on December 15 next, it was stated in the House of Commons on Nvember 7 by Mr. Neville Chamberlain, Chancellor of the Exchequer, that the British Government offered the United States of America 7,500,000 dollars as a token payment for the war debt instalment due on December 15, and that President Roosevelt accepted the offer and did not regard Great Britain as being in default.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

COMMUNIQUES AND RETURNS

TREASURY BILLS

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, November 7. The total amount offered was Rs. 2,55,50,000. Tenders at Rs. 99-9-8 and above were accepted in full and those at Rs. 99-9-0 were allotted approximately 45 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Rs. 1-11-2 per annum.

Tenders for Rs. 1½ crores of three months Treasury Bills will be received on Tuesday, November 14. Successful tenderers should make payment on Friday, November 17. Other conditions are as usual.

Three months intermediates will be sold from November 8 to 13 at Rs. 99-9-6 per cent subject to the conditions previously announced.

Three months intermediates sold from November 1 to 6 amounted to Rs. 10,75,000.

STERLING TENDERS

The Controller of the Currency notifies that there were no tenders for sterling on Wednesday, November 8.

On Wednesday, November 15, £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE.

The balance of the Gold Standard Reserve on the 30th September, 1933, amounted to £40,000,000 and was held in the following form:—

	£
Cash at short notice at the Bank of England	3,606
British Treasury Bills	14,939,211
Other British and Dominion Government Securities	13,894,849
Gold.—In England	2,152,334
In India	9,010,000
Total ...	40,000,000

STATISTICAL INFORMATION

INDIAN CUSTOMS REVENUE

According to returns received in the Department of Commercial Intelligence and Statistics, the grand total of gross Indian Sea and Land Customs Revenue (excluding salt revenue) collected during the month of October 1933 amounted to Rs. 4,29 lakhs as against Rs.3,81 lakhs in the preceding month and Rs. 4,48 lakhs in October 1932. The total revenue realised in the sevenmonths ended October 1933 was Rs. 28,00 lakhs as compared with Rs. 31.00 lakhs during the same period last year. Import duties accounted for Rs. 20,55 lakhs of this amount, export duties Rs.2,40 lakhs, excise duties on motor spirit and kerosene Rs. 2,64 lakhs and Rs. 1,61 lakhs respectively and Land Customs and Miscellaneous Rs. 80 lakhs. Increases were noticeable under import duties on machinery, motor cars, liquors, wood pulp, wheat, tea, dyes and colours, betelnuts, lubricating oils, railway plant and rolling stock, cinematograph films, paper and stationery, toys, games and sports goods ; export duties on jute, raw and manufactured, hides and skins, raw, and rice, excise duties on motor spirit and kerosene and land customs receipts also showed increases. On the other land, import duties on sugar, cotton piecegoods, iron and steel, raw cotton, metals other than iron and steel, motor spirit, kerosene, cotton yarn and thread, tobacco, unmanufactured, pneumatic rubber tyres and tubes, silver, artificial silk yarn and thread, silk and artificial silk mixtures, cutlery and hardware, tobacco, manufactured, molasses, silver wire and thread, and electric lighting bulbs showed noticeable decreases. The protective special duties on private imports during the seven months ended October, 1933 aggregated Rs. 6,60 lakhs. The duties on Government stores inclusive of protective duties collected thereon, amounted to Rs. 12 lakhs, as compared with Rs. 23 lakhs in the corresponding period of the preceding year.

BOMBAY FOREIGN TRADE

The aggregate value of the foreign trade of Bombay —Imports and Exports—for the month of September, 1933, amounted to Rs. 10.3 crores, showing a decrease of Rs. 2.51 crores, or nearly 20 per cent., as compared with the figures for September, 1932, but an increase of Rs. 3.36 crores, or 48 per cent., as compared with those for September, 1931. The decrease of Rs. 2.51 crores is chiefly due to reduced shipments of gold. Imports of merchandise and treasure and exports of Indian produce and silver also showed decreases. Re-exports of foreign merchandise slightly improved.

Imports of merchandise amounted to Rs. 3.53 crores, showing a fall of Rs. 73.56 lakhs, or 17 per cent. from the figures for September, 1932, and of Rs. 26.79 lakhs or 7 per cent. from those for September, 1931. The fall of Rs. 73.56 lakhs is attributable chiefly to smaller arrivals of cotton piecegoods (—over 10 million yards and—Rs. 22.54 lakhs), silk raw and manufactures (—Rs. 15.61 lakhs), artificial silk piecegoods (—6½ million yards and —Rs. 13.29 lakhs), mineral oils (—nearly 4½ million gallons and —Rs. 12.64 lakhs), cotton twist and yarn (—over 1 million lb. and —Rs. 10.45 lakhs), metals and ores (—Rs. 6.32 lakhs), rubber manufactures (—Rs. 4.9 lakhs) and artificial silk yarn (—½ million lb. and —Rs. 3.21 lakhs). On the other hand, imports of machinery and mill work, motor cars, including motor wagons, cycles and parts thereof and alizarine and aniline dyes showed noticeable increases of Rs. 1077 lakhs, Rs. 8.76 lakhs and Rs. 5.82 lakhs, respectively. Arrivals of cotton raw also improved by 253 tons in quantity and by Rs. 2.73 lakhs in value. Imports of gold amounted to Rs. 4.34 lakhs as against Rs. 5.43 lakhs in September, 1932, and Rs. 16.17 lakhs in September, 1931, and those of silver to Rs. 5.36 lakhs against Rs. 7.99 lakhs and Rs. 43.83 lakhs, respectively.

Exports of Indian produce amounted to Rs. 1.71 crores, showing a fall of Rs. 22.11 lakhs, or 11 per cent. from the figures for September, 1932, and of Rs. 5.56 lakhs, or 3 per cent., from those for September, 1931. The fall of Rs. 22.11 lakhs is almost entirely due to reduced shipments of cotton, raw (—10,409 tons and —Rs. 65.1 lakhs) and grain, pulse and flour (—3,090 tons and —Rs. 3.26 lakhs). Shipments of seeds, on the other hand, increased by 37,676 tons in quantity and by Rs. 48.13 lakhs and those of hides and skins, raw and tanned by Rs. 2.19 lakhs in value. Exports of gold amounted to Rs. 4.75 crores as against Rs. 6.32 crores in September, 1932, and Rs. 29.29 lakhs in September, 1931, and those of silver to Rs. 1.04 lakhs against Rs. 1.62 lakhs and Rs. 21.84 lakhs, respectively.

Re-exports of foreign merchandise amounted to Rs. 19.79 lakhs as against Rs. 18.96 lakhs and Rs. 26.02 lakhs, respectively.

The trade statistics of the first half of the financial year 1933-34 show a falling off of Rs. 7.92 crores or 26 per cent. and of Rs. 6.42 crores, or 22 per cent. in imports, but an improvement of Rs. 4.28 crores, or over 11 per cent. and of Rs. 19.55 crores, or 89 per cent. in exports, as compared with the figures for the corresponding period of the years 1932-33 and 1931-32, respectively. During this period, imports of gold fell by Rs. 5.09 lakhs and Rs. 40.31 lakhs to Rs. 32.47 lakhs and those of silver by Rs. 75.96 lakhs and Rs. 1.45 crores to Rs. 10.26 lakhs. Imports of merchandise also declined by Rs. 7.1 crores and Rs. 4.57 crores to Rs. 21.99 crores. The decline of Rs. 7.1 crores from the figures for the corresponding period of 1932-33 is brought about by smaller arrivals of most of the principal articles of import, the more important being cotton, raw (—38,674 tons and —Rs. 3.41 crores), cotton piecegoods —nearly 34 million yards and —Rs. 33.32 lakhs), mineral oils (—over 4½ million gallons and —Rs. 54.93 lakhs), cotton twist and yarn (—nearly 5 million lb. and —Rs. 53.55 lakhs), silk raw and manufactures (—Rs. 52.34 lakhs), artificial silk piecegoods (—over 19¼ million yards and —Rs. 40.96 lakhs), metals and ores (—Rs. 36.99 lakhs), alizarine and aniline dyes (Rs. 22.39 lakhs) and artificial silk yarn (—nearly 2 million lb. and —Rs. 17.83 lakhs). Imports of motor cars, including motor wagons, cysles and parts thereof and machinery and millwork, on the other hand, advanced by Rs. 29.56 lakhs and Rs. 18.23 lakhs, respectively.

Exports of gold amounted to Rs. 25.79 crores as against Rs. 27.35 crores and Rs. 1.65 crores and those of silver to Rs. 5.77 lakhs against Rs. 9.34 lakhs and Rs. 10.52 lakhs, respectively. Exports of Indian produce were valued at Rs. 14.65 crores, showing an increase of Rs. 5.73 crores, or 64 per cent. over the figures for the corresponding period of the year 1932-33 but a fall of Rs. 3.08 crores, or 17 per cent., from those for the same period of 1931-32. The increase of Rs. 5.73 crores is accounted for mainly by larger shipments of cotton raw (+66,978 tons and +Rs. 4.23 crores), seeds (+95,894 tons and +Rs. 1.11 crore) and wool raw (+over 5 million lb. and +Rs.20.74 lakhs).

Re-exports of foreign merchandise amounted to Rs. 1 crore as against Rs. 85.16 lakhs and Rs. 1.51 crore, respectively.

RAILWAY EARNINGS

The total approximate gross earnings of all State owned railways for the week ending 21st October, 1933, (29th week), amount to Rs. 142 lakhs, Rs. 17 lakhs less than the figures for the last week and Rs. 14 lakhs less than the corresponding week of the previous year and Rs. 8 lakhs less than the corresponding week of 1931-32.

The total approximate gross earnings from 1st April, to 21st October, 1933, amount to Rs. 45.08 crores or Rs. 67 lakhs more than the figures for the corresponding period of the previous year and Rs. 78 lakhs less than the corresponding period of 1931-32.

A comparison with the figures of the previous week for the principal State-owned railways shows decreases in the approximate gross earnings of all railways except the Burma. A comparison with the figures of the corresponding week of 1932 shows decreases in the approximate gross earnings of all the principal State-owned railways except the A.B., B.B. & C.I. and Burma.

During the week ending 21st October, 1933, there were loaded on the broad gauge 59,649 wagons, being 8,618 fewer than in the corresponding week of the previous year, or a decrease of 12.6 per cent. On the metre gauge there were loaded 38,731 wagons, being 1,508 fewer than in the corresponding week of the previous year, or a decrease of 3.75 per cent.

RAILWAY WORKING EXPENSES

The following are the approximate ordinary working expenses including suspense but excluding appropriation to and from depreciation fund of the State-owned railways from 1st April, to 31st August, 1933, as compared with the actuals of the corresponding period of last year.

Railways.	Up to 31-8-32 (in lakhs)	Up to 31-8-33 (in lakhs)

TATA IRON AND STEEL

Messrs. Tata Sons, limited, Agents for the Tata Iron and Steel Company, Limited, report that the total approximate production of iron and steel at the steel Works at Jamshedpur during the month of October was :—

	Tons.
Pig Iron	80,000
Steel Ingots	69,000
Finished Steel	45,000

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Thursday, Nov. 9.

During the week under review jutes continue to be a steady feature with a fair amount of enquiry for coal. Government securities, however, were also steady but quiet 3½ per cent. quoting Rs. 83-10, 3½ per cent. New Loan (1947-50) Rs. 93, 4 per cent. 1960-70 Loan Rs. 98-7, 5 per cent. 1945-55 Rs. 114, 4 per cent. 1943 Rs. 101-8, 5 per cent. U. P. Bonds Rs. (1944) Rs. 107 and the 4 per cent. Punjab Bonds (1948) Rs. 99-3.

Jute.—A steady tone prevailed in this section throughout the week and a fair amount of business was put through. Howrahs were dealt in at Rs. 48-4, Kamarhattys at Rs.455, Union Rs. 381, Belevedere Rs. 285, Anglo-India Rs. 329-8, Bally Rs. 126, Barnagore Rs. 119, Kanknarrahs Rs. 404, Lansdowne Rs. 107-8, Lawrence Rs. 417-8, Lothian Rs. 248, New Central Rs. 335, Presidency Rs. 5, Orient Rs. 195, Budge-budge Rs. 294-8. Alliance Rs. 261-8 and Hukumchand Rs. 13-4.

Coal.—In this section a moderate buying enquiry was in evidence, Bengals quoted Rs. 240, Burrakurs Rs. 14-6, New Beerbhoom Rs. 12-4, Raneegunge Rs. 41-8, South Karanpura Rs. 5-8, Kalapahari Rs. 11-8, Katras Jherria Rs. 30, Sendra Rs. 10-7, Rewa coalfields Rs. 11-10, Bokaro and Ramgur Rs. 8-6, Equitables Rs. 20-8 and Amalgamated Rs. 14.

Tea.—This section was steady with a fair amount of enquiry. Business was done in New Terai at Rs. 12, Birpara Rs. 304, Teen Ali Rs. 20, Betjan Rs. 25-12, Bishnauths Rs. 25-4, Hattikhira Rs. 20-12, Jutlibari Rs. 16-8, Sarugaon Rs. 12-8 and Tengpani Rs. 17-10, Tezpur Rs. 9-4, Dimakusi Rs. 26-12, and Gohpur Rs. 7-8.

Banks and Railways.—Bank shares remain unchanged Imperials fully paids quoting Rs. 1220-8 and the Contributories Rs. 306, Centrals Rs. 24, Bank of India Rs. 103½ and Eastern Bank Rs. 65. In Railway shares, Howrah-Amtas quoted Rs. 90, Shahdara-Delhi Rs. 119, Mayurbhang Re. 61-8, Arrah-Sasaram Rs. 66. Darjeeling-Himalayan Rs. 71, Bankura-Damodar Rs. 74 and Baraset-Basirhat Lt. Rly. Rs. 56.

Cotton.—This section continued to remain featureless Dunbars (Ordy) quoting Rs. 119, Kesorams Rs. 3-6, Bengal Nagpur Rs. 18 3/8, Bengal Luxmi Rs. 70, Elgin mills Rs. 54, Muirs Rs. 250 and New Ring Rs. 69.

Miscellaneous.—This section showed no change Indian Woods Products were quiet at Rs. 30, B. I. Corpn. As. 14, Indian Iron and Steel Rs. 4-6, Bengal Telephone Rs. 17-6, Calcuta Tramways Rs. 16-12, Bengal Paper Rs. 71-3, Indian Standard Wagon Rs. 45, Cuttack Electric Rs. 6-2, Dacca Electric Rs. 16-8, Arthur Butler Rs. 4-6, Marshalls Rs. 1-1, Indian Paper Pulp Rs. 111, Burma Corporation Rs. 9-5, Tide Water Oil Rs. 8-8, Titaghur Paper Rs. 15-8, while in sugar shares Carew & Co., were mentioned at Rs. 13-10, Champarans Rs. 20, New Savan Rs. 11-0 and Belsund at Rs. 9-4.

MADRAS STOCK EXCHANGE.

(*By Wire.*)

(From Our Correspondent).

Madras, November 9.

The securities market was again erratic 3½ per cent. paper improved on considerable speculative buying mostly from Bombay. The news of the repayment of 6 per cent. 1933-34 sterling loan coupled with the issue of a new India sterling loan had a stimulating effect on paper which touched Rs. 84 but sharply reacted. The 1960-70 loan touched Rs. 98-9, but at the close was a shade easier; 1945-55 was sought after at Rs. 113-14. In the cash section a bright enquiry was noticeable in 1947-50 loan which moved from Rs. 92-6 to Rs. 93-4, 1940-43 loan was taken up at Rs. 105-11 and the 1938-40 at Rs. 109-6. The short-dated bonds were in keen demand especially 5 per cent. 1935 and 6½ per cent. Treasny Bonds. Amongst the State loans Mysore 1955 was asked for on Bombay account as high as Rs. 113-14, while the 1933 bonds were down at Rs. 109-11. The Cochin Loan had no deals. There were fair sellers, however, of Madras Corporation Debentures but little interest was taken by buyers at the prices quoted in Joint Stock Company Debentures. Coimbatores were wanted at Rs. 195, and United Nilgiri teas at Rs. 100, while Vellore Electric Debentures were done at 102 per cent.

The preference share market was quiet with Spencer A, preferenc bid up to Rs. 9/8 and Buckingham and Carnatic, ordinary shares, at Rs. 136-8; Vasanta Mills were again quoted at Rs. 106 cum dividend with buyers over; Banks were steady, Imperials fully paids quoting Rs. 1,220 and the Contributories Rs. 301-4; the Bank of Hindusthan was wanted at Rs. 30, Central Bank at Rs. 23-8, Indian Bank small shares at Rs. 19, Indian Bank big shares had sellers at Rs. 92 with buyers at Rs. 90. The State Aided Bank of Travancore were a weak feature at Rs. 18.

Cotton shares were steady Buckingham and Carnatics (Ordys.) were done at Rs. 179 and Kaleeswarars at Rs. 292-8. There was no business passing in Cements.

Sugar share were easier Deccans were done at Rs. 260 for the big and Rs. 63 for the small, New Savans were done at Rs. 12 with sellers over. East India Distilleries were firm at Re. 1. The Planting section was devoid of interest Peermades were done at Rs. 20½ and Peria Karamalis at Rs. 32½. Kalutara rubber was taken up at Rs. 6-4 and Cochin Malabars at Re. 1.

The Miscellaneous section was featureless with sellers in Singarenis.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From our Correspondent.)

Bombay, November 9.

Giltedge securities developed a firm tone during the week. The ball was set rolling by prominent broker effecting considerable purchases and by close time on Monday the rate for Government 3½ per cent. Loan came up from 82-6 to 83-6. The next three days, however, are destined to witness fluctuations. On Tuesday there appeared some heavy buying by persons who had received an inkling about imminent issue of new sterling loan and the rate touched 84. The announcement of new 3½ per cent. India Sterling loan at 97 influenced the local rate to open at 84-1 but higher level drew lot of profit selling mostly by those who had bought on receiving intimation. The rate rapidly declined about 83-2 and closed at 83-7. To-day the rate after touching 83-8 closed at 83-0. At the moment local sentiment is not in favour of raising rates.

Forward business in shares which has been suspended so long will be resumed from Saturday for all shares excepting those of Currimbhoy group of mills. Cash deals continued but business was limited and fluctuations small. Imperial Bank old issues have improved from 1,222½ to 1,240. Tata Steel Second Preference improved from 99-12 to 100½; but again came down to 100. Scindia improved from 9 to 9-5 and closed at 9-3. Luxmi Mills declined from 785 to 765 and Vishnu Mills from 1,490 to 1,446. In most of the scrips only negligible changes have occurred in prices.

JUTE AND JUTE GOODS

JUTE

The Jute market during the week has been quiet but steady. There has also been a rise in prices over those of last week. There were large imports from mofussil centres but buyers, however, took no interest. Mills, too, took no interest but there were sellers for Ready at Rs. 23-12, and Lightnings Rs. 21-4. There were also small sellers of Indian Jat LR's and XLR's at Rs. 4 and Rs. 3-8 respectively.

JUTE MILLS OUTPUT

The total reported production of manufactured goods by the mills in the membership of the Association *and also* by the Adamjee, Agarpara, Gagalbai and Shree Hanuman Mills, for the month of October, 1933, was:—

Description.	Quantity.
1.—Twist and Yarn—	
(*a*) for sale	1,481 tons.
(*b*) all other, including that used in sewing bags ...	889 tons.
2.—Canvas	33 tons. 61,570 yards.
3.—Gunny Bags (tonnages exclude sewing twist)—	
(*a*) Hessian	3,153 tons. 1,30,15,112 yards. 62,51,291 number.
(*b*) Sacking	39,471 tons. 9,25,95,398 yards. 3,79,09,065 number.
4.—Gunny Cloth—	
(*a*) Hessian	23,811 tons. 9,04,41,032 yards.
(*b*) Sacking	1,617 tons. 36,95,351 yards.
5.—Other manufactures, including ropes	85 tons.
6.—Total production (above figures combined)—	
(*i*) All kinds	70,540 tons.
(*ii*) Hessian (both as bags and cloth)	10,34,56,144 yards.
(*iii*) Sacking (both as bags and cloth)	9,62,90,749 yards.
(*iv*) Canvas	61,570 yards.

JUTE MANUFACTURES

The jutegoods market during the week was easier. This was due to the absence of any fresh buying interest. Speculative interest was, however, taken in forward positions but sellers were not in the mood to discount. 9 porters quoted Rs. 8-14 for ready. Heavy Goods market was also easier with more sellers in evidence but the amount of business reported was on the small side. Liverpools were done at Rs. 25-8, for near and Rs. 25-12 for July-September.

London Market:—

The London raw jute market during the greater part of the week furnished very little matter for comment. Trade with Continental spinners has been generally small. True, a fair number of buying orders came to hand, but were mostly under sellers' ideas. After a period of weakness, slightly more steadiness was discernible, due to Calcutta showing a turn in face of covering. Signs were not wanting that quite a liberal business could be done with various Continental countries in the region of £14 10s. for Firsts, but this figure sellers refused to entertain.

Jute Yarns.—When spinners signified their inclination to accept 1s. 10d. for common 8 lb. cops and 1s. 11d. for 8 lb. spools, buyers purchased a fair quantity, mostly for quick delivery. There are very few spinners who would again enter these terms, and the quotations are usually ¼d. more. Twist continues at from 3⅜d. to 3½d. for 3 ply 8 lb., and sacking yarns are mostly unchanged though one or two spinners would accept 2 3/16d. for 24 lb. weft and 3 3/16d. for 8 lb. chains. No change is recorded in Rove and carpet yarns are steady. The finer yarns are still more or less neglected and rather easier in price.

Jute Cloth.—Buyers are difficult to move, and, though they continue to make fair inquiries, they are content to purchase small quantities only at the best prices they can do. The Argentine are inquiring in this market for further large quantities of 6½ oz. hessians of various widths for meat wrappers. Prices quoted by manufacturers still vary greatly according to the suitability of the orders from 3d. down to 2¾d. for 10½ oz. 40 in. and from 2½d. to 2⅝d. for 8 oz., the higher rates being obtainable for quick delivery and the lower prices for some distance ahead. Little further business has been done in linoleum hessians, but there has been more interest in heavy goods.

Calcutta Goods.—The Calcutta market has still ruled quiet, business being interrupted by holidays at that centre on Wednesday and Thursday. Prices have shown a tendency to decline and considerable irregularity has been seen in this market, where some sellers have been low in their terms compared with the majority. There has been a good deal of buying done here where prices have been most reasonable. Business in spot goods has been rather slow.

German Trade.—There has been little doing in the market during the past week. Buyers continue to purchase very small quantities and, with exception of some larger orders for sugar bags in the early part of this month, no contracts of importance have been made. Prices are all more or less unchanged.

Linen Trade.—The fluctuations in Exchange are still playing havoc with business in raw flax and tow, and sellers are not keen to quote. Only in near-at-hand and spot parcels is business possible, so that prices are all more or less nominal. The Soviet Monopoly are not sellers meantime for shipment. The peasants have so far brought in very little of the new crop, but it is expected that supplies will be coming in more freely in the near future. There is

ZENITH LIFE

a lull, in the yarn market, and spinners would be prepared to shade their terms a little in order to get on. The cloth end remains quiet.

Total reported sales for the week ending Saturday the 4th November, 1933.

COTTON AND COTTON GOODS

COTTON.

By Wire

(From Our Correspondant)

Bombay, November 9.

American markets ruled quiet till Monday when rates declined by over dollar per bale due to pre-Bureau liquidation. According to general expectations Bureau figures should have been about one crore 34 lakhs of bales but it was estimated at 1,31,00,000 bales and hence rates on Wednesday improved by 1¾ dollar per bale, New York January closing at 9.77. At the same time due to new gold policy dollar has depreciated to well-nigh 5.00 in terms of sterling. Hence local rates are not much affected. Broach April-May rate touched the highest at 184-8 lowest at 169-8 and closed at 186-14.

In spite of steadier advices from New York the local market has ruled easy and a decline in values is to be reported. Pending unsettled prospects of Anglo-Japanese settlement there was again liquidation together with hedgeselling. Crop in the interior has begun to move and hedges therefore are plentiful. Crop reports are quite satisfactory and the reported damage is expected to be less than was originally thought to be. American crop report is also bearish, the estimates of yield increasing month after month. The increasing number of mill closures in Bombay and the anticipated reduction in import duty on British cotton goods have reacted on the market very unfavourably, the impression being the reduced cotton purchases by Indian mills. The prospects of a rise in the market at the moment are not very poor. Trade and speculative interests were conspicuous by their absence.

BULLION

GOLD

(*By Wire*)

(From our correspondent)

Bombay, November 9.

Gold.—During the period, local prices moved between five annas from 32-11-6 to 33-0-6. As the American Government has been buying gold in world markets, there are no prospects of a material decline. Besides, receipts from upcountry people have fallen down. On the other hand, as yet American purchases in European markets have not amounted to much and here rates don't rise, December rate being quoted at 32-12-9 at 5-30 p.m. to-day.

The rate for gold in the local market was influenced by the movements in the London-Paris Cross rate and reports about American gold purchase prospects. The undertone was steady and the rise in prices is well maintained. The latest London quotation per fine oz. os £6-11-10, while in Bombay it is Rs. 32-14-6. Arrivals from up-country parts are not very large due to anticipation of further rise in the values of gold on reports of American purchase prospects. Stocks in Bombay are rather heavy in comparison with the daily offtake of only 2 to 3 thousand tolas. Exports continue with weekly variations in quantities, the average export coming to about half a crore of rupees worth of gold per week. Sovereigns are steady in sympathy with gold, business however being on a restricted scale.

***LONDON* (Air-Mail Week.)**

Gold reserve against notes of the Bank of England was £190,377,299 on the 18th October, showing no change from the previous Wednesday's figure.

Bar gold purchases by the Bank during the week amounted to £69,730.

Except on the 24th October, on which date £620,000 of bar was disposed of, on the other days during the week, the amounts available were moderate. Continental demand continued to be keen and hence the premium over the franc parity tended to increase.

The following were the United Kingdom imports and exports of gld registered from mid-day on the 16th instant to mid-day on the 23rd instant :—

	Imports £
Netherlands	2,249
France	42,866
Switzerland	55,940

SILVER

(By Wire)

(From Our Correspondent)

Bombay, November 9.

Silver.—Silver rates at first developed a slightly rising tendency but it has been nipped in the bud, December rate, after touching about 57-2, being quoted to-day at 56-15-6 at 5-30 p.m.

Silver.—On reports of issue of silver certificates in U.S.A. the market is well maintained at the rise, the local quotation being Rs. 57 for first and Rs. 57-2 for second settlement. Bombay quotations are Rs. 56-14 and Rs. 57/- for ready. Strength is also given by improved Shanghai market. The volume of business in both the local and London markets is not very large. Stocks in Bombay and Calcutta are practically unchanged and the enquiry for internal requirements is poor as it used to be. Long bull interest is well supported at the moment by the rise while the technical position on the contrary is rather bearish.

LONDON (Air Mail Week)

During the week, the market was fairly steady without any important price movements. Support was forthcoming from China and the Indian bazaars as against the sales from the Continent and America. On the whole New York and China rates conformed to London parity and little change is anticipated at present. Developments in U.S.A. must influence the market, but the nature of any such is not quite clear.

TEA

At the tea sales during the week the quantity available was considerably less. A few more Darjeelings were on offer and these showed some improvement. There was more demand and Indian buyers displayed lively interest. Although the sale opened slow the tone soon brightened up and the market was steady for all kinds except better mediums and tippy brokens. Low Fannings, however, were a particularly good feature and about a quarter of an anna dearer, while leaf teas improved by a pie or two.

The following are the full particulars of sale No. 21.

Teas with Export Rights

	1933.	1932.	1931.

Calcutta,
7th November, 1933.

GRAINS AND SEEDS

WHEAT

Ruling easier on profit taking, during the middle of the week, the wheat market in Calcutta was quite firm. There was good enquiry for May-Beta from up-countries, the dealers there selling Ready and buying Forward. New York advices were further steady to firm and values were better than the end of previous week. The weather conditions in India are however satisfactory and with better crop prospects the rise in values does not seem justifiable. Grain prices in general have shown strength in the course of the past few weeks but purchases at rise do not appear advisable.

Quotations:—

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

THE STERLING LOAN—AND NEW BORROWING

At the very outset we may agree that the terms and conditions of the Sterling loan issued this mid-week are as favourable to India as we have not known for many a long day. The crisis, that occurred in the Indian giltedge market last Spring, would have been partly averted, if the terms of the last Sterling loan were on a par with those of the present one. While, in relation to a disastrous and ill-advised issue of 4 per cent. Sterling loan, six months ago, the 3½ per cent. loan on this occasion is commendable, we do believe that even more satisfactory terms could have been obtained if *bona fide* endeavours had been made. Considering the relentless firmness, with which the financial safeguards in the case of India are urged, the amazing fervour with which they are expounded, the comprehensive thoroughness in which they are devised and the sublime faith with which they are put forward, one would have thought that India is the one country whose credit is being guarded, protected and secured on a hundred per cent. basis of safety. These safeguards mean something or nothing. If they mean anything, India's credit should be higher than that of any country or any county or borough in Britain. If they mean nothing, the more honest course would be to abandon them altogether. You cannot enforce safeguards of the most rigorous description and yet deny to India first-rank in giltedge. From this point of view, a 3 per cent., rather than a 3½ per cent., loan is indicated. But we realise that neither Sir George Schuster nor we can protest in this regard. The *hukum* of the Secretary of State is final and conclusive. In the spirit of being grateful for small mercies, we should console ourselves that it might have been worse and that even if a 4 per cent. loan had been fixed up our means or purpose of protest would be *nil*.

* * *

Why is this New Loan being raised? In answering this query, it is necessary to make a study of the loan programme estimate furnished by the Finance Member on February 28 in the course of his Budget speech and compare it with the actuals. So far as external commitments are concerned, the assumption was that a Sterling loan of £6 million should be floated in addition to the remittance programme of £21 millions. A further assumption was that from the above proceeds £7 million of the 6 per cent. 1933-35 would be redeemed on June 15. Sir George Schuster added "if conditions are favourable in London we might issue a larger loan and use the proceeds for strengthening our sterling currency reserves or to repay ten million of the 6 per cent. 1933-34 bonds which we have the option of repaying on December 15." Notice of repayment has already been given. This means that over and above the budget estimate a further ten million would be needed. Actually, however, the sterling loans issued this fiscal year amount to twenty-two millions that is 4 per cent. loan for twelve millions and 3½ per cent. loan for ten millions. Excess sterling borrowing is, therefore, six millions. It is also noteworthy that sterling purchases up to date are nearly equal to the entire remittance programme contemplated in the budget. Moreover, these remittances were effected in a period of a year usually considered unfavourable from the point of view of Government's purchase of sterling. December to March witnesses stronger exchange market; and given continuance of conditions prevalent in the first half of the financial year, it should be possible to remit anything like fifteen millions in the remaining months of the year. Excess of sterling proceeds over budget anticipations may thus be in the neighbourhood of eighteen millions. A set off must be made, however, for the short fall in the opening balance of the Home Treasury as compared with the budget estimate. Sir George Schuster estimated that the Secretary of State would have 13.4 million on April 1, 1933. Actually the balance was only ten million. So allowing for this deficiency of 3.4 millions excess sterling proceeds might be something like fifteen millions at the end of the year. Does this mean that this amount will be used for strengthening the external reserve of the Reserve Bank? In unofficial, but inspired statements, made both at the time of the last loan and the present loan, it was mentioned that the sterling loans were being raised partly for facilitating the early inauguration of the Reserve Bank. But during the Select Committee's discussions we have not heard a word of any transfer being made from the surplus assets of the Home Treasury to currency reserves.

* * *

Let us now turn to the Rupee loan programme. In the budget speech Sir George Schuster stated that he would have to deal with any portion of the Rupee loans of 1929-47, 1933 and 1933-36 which is not converted and that, assuming the conversion of Rs. 30 crores of the latter, he would have to raise a loan of Rs. 4 crores in India. The total of loans converted came to Rs. 33.81 crores. The unconverted portion for which Sir George Schuster had to find money was, therefore, reduced by nearly Rs. 4 crores. This means that even the small loan of Rs. 4 crores contemplated by him became unnecessary. On the other hand, the 4 per cent. 1931-36 loan amounting to Rs. 10 crores was redeemed over and above the budget provision. It follows that the New Loan needed in this fiscal year was Rs. 10 crores. 3½ per cent. 1947-50 yielded cash for Rs. 15.60 crores.

* * *

Let us turn to the Treasury Bills' position. The estimate in this regard was that the floating debt on April 1 would be Rs. 28 crores and on March 31, 1934, Rs. 20 crores. The Treasury Bills outstanding to-day are Rs. 31 crores. The excess over the estimated closing figure is, therefore, Rs. 11 crores. There is besides the ways and means advance of Rs. 6 crores which the Government have taken from the Imperial Bank. The short-term borrowings must, therefore, be reduced by Rs. 17 crores by the end of the year. We may safely conclude that this would be roughly equal to the excess of revenue over expenditure in the final quarter of the financiol year.

* * *

The position in regard to sterling borrowing, rupee borrowing and short term borrowing may now be summed up as follows. Firstly, excess in London is six million minus 3.4 million or 2.6 million or nearly Rs. 3 crores. Secondly, excess in India on the Rupee loan account is Rs. 5½ crores. No change in Treasury Bills account. Excess borrowing would, on balance, be in the vicinity of Rs. 8½ crores. There is every reason to think that the position of this represents mal-adjustment in the current budgetary position. Herein is the basis for the conclusion that when Sir George Schuster announces his last budget at February-end he will disclose a worseness in the revised figures of over Rs. 5 crores as compared with the original estimate.

LANDSLIDE IN FAVOUR OF LABOUR

Is the National Government in Britain nearing its end?—that is the question suggested by the results of the Municipal Elections which were announced at the end of last week. That the National Government must come to its end in a sense other than that in which all things must come to an end, is certain. For there is much in the nature and working of the National Government which is opposed to the political instincts of the electorate. Some time ago, we attempted to appraise the achievements of the National Government in the sphere of economy and foreign trade and came to the conclusion that, considering the extraordinarily difficult times, in which it had to function, the Government has a measure of solid achievement to its credit. But the significance of this achievement to its popularity in the country is apt to be misinterpreted. The trade treaties, for instance, have nothing to do with the resentment against the questionable tactics adopted at the last general election, or the manner in which the question of unemployment relief has been treated. Nor can they persuade the people not to look for the advantages that might flow from putting a more progressive party at the head of affairs. The secession of men like Lord Snowden and Sir Herbert Samuel from the National Government must necessarily have its effect on the popular mind. The labouring classes, which at the time of the last General Election were taken off their feet by the cry that the budget and the pound were in danger and that they could not be saved by any other means than trusting Mr. MacDonald and his colleagues with an absolute majority, are now realising that they had been the victims of an exaggerated fear. They had little time then to realise the danger involved in dealing a crushing blow to Labour at the polls. And there are signs now that the revulsion of popular feeling against the National Government has been on the increase.

* * *

The final figures in the Municipal Elections show a big landslide in favour of Labour, which has succeeded in capturing no less than 261 seats from its opponents. Deducting the loss of 19 seats, Labour's net gain is 242, of which the Conservatives have lost 108 seats and the Liberals 34. 25 Borough Councils have a definite Labour majority. If to these, we add the recent by-elections like those of East Fulham and Kilmernoc we realise that the recovery of Labour is well under way.

* * *

The reactions of the Ministerial party to these signs of popular restiveness are interesting. Mr. MacDonald has, of late, been making more enthusiastic and more insistent claims in behalf of his Government. He has been anxious to make out that the National Government has substantially fulfilled their election promises. There can, as we have said already, be no question that the financial and monetary policy of the National Government has been conducted with ability and circumspection; and for the troublous days that have intervened between the middle of 1931 and to-day, it is difficult to conceive of a policy more suited to the requirements of Great Britain and the conditions of international finance. But the question that the country may raise before itself to-day is not, whether, in a given set of conditions, any other party could have marked time with greater caution and efficiency, but whether the Government has the outlook necessary to strike out those new paths which alone can assure the masses of a comfortable standard of living. In this regard the Government and their supporters have shown themselves to be guilty of notorious ineptitude. And while granting the Government every credit for steering the State through troubled times, there is undoubtedly the obligation to take stock of the position from the stand point of the future and to prepare for a more positively constructive programme than the National Government can be depended upon to formulate. This, we believe, is the psychology behind the landslide in favour of Labour, the first signs of which are so unmistakably strong.

* * *

It is significant that the first instinct of Mr. MacDonald and his colleagues in relation to this movement is rather to consolidate the ranks of their supporters, than to exercise their minds in the direction of effecting changes in policy which will have the effect of taking the wind out of the sail of their opponents. It was reported some time ago by the *Daily Express* that Mr. Ramsay MacDonald was contemplating the formation of a National party, so as to eliminate the weakness arising from the conglomeration of heterogenous, and sometimes even conflicting, elements. The forecast is now apparently confirmed by the speeches of Mr. Baldwin and Sir John Simon at a luncheon given in their honour on Monday last by the National Labour Committee. This is the first occasion on which a definite hint has been thrown of the intention of the Government to fight the next election also as a national government. And it may be said that, if this should come about, the Government party will be a more compact one than on the last occasion. For each component of the national party has during this one year shed its less homogenous elements. The Liberals, who felt that the departures from traditional free trade in the stress of peculiar conditions of world trade to-day have gone further than is necessary, have left the National Government and have pitched themselves in a position of more active opposition. In Labour, Lord Snowden resigned from the Government in dramatic circumstances and has since indulged in even personal attacks against the Premier. The Conservative wing has disclosed certain fissures over the White Paper policy towards India; but there is no reason to think that there is not behind all this apparent conflict a substantial identity of purpose and policy or that the differences are so serious as to cause a cleavage. And after all, the policy of the National Government has so far been what the policy of the Conservative Party would have been, if it were not obliged to work in co-operation with a handful of Labour and Liberal leaders.

* * *

Both Sir John Simon and Mr. Baldwin have been emboldened to give public expression to their ideas in respect of the next election contests, only because of the feeling that a greater agreement of opinion has been established during these years between themselves. Sir John Simon, for his part, has reason to feel that his former friends have made it easier for him to coalesce with conservatism. While, on the one hand, he can claim for himself the support that is due to a Liberal, in matters of policy he could continue to enjoy the freedom to work hand in glove with Conservatives. And in defence of such compromising action, he contends that the tendency of the last few years has been to bring Conservatism and Liberalism together in a mutual approach to each other's standpoint. "I was brought up", said Sir John in his speech at the Luncheon, "in the strictest school of Liberalism." It suits Sir John Simson also to contend that the old free trade versus protection controversies are dead, and that both sides now realise that in this conflict there is no single or simple formula which will get them through their troubles. But Sir John overlooks the fact that it is only when the conditions will not allow of a simple formula that the free trade versus protection controversy gains an increased importance. So far as Great Britain is concerned, this controversy had never much of a significance, except to politicians who are not prepared to judge economic questions on their own merits. No one would contend that during the 19th century or the pre-war years Great Britain had any thing to gain by a mitigation, not to speak of abandonment, of the policy of international free trade. It is only during the complications of world trade in the present junc-

ture that it is of immense importance to the masses, whether the directors of their economic policy recognise the core truth in the doctrines of free trade or whether they succumb too easily to the economic fallacies of the rival creed. Far from agreeing with Sir John, we should say that the fight between free trade and protection have, for the first time, gained a real significance to the economic life of the nation. It is only in the present conditions that an ill-advised measure of free trade or protection will affect the fortunes of industry seriously. And when complicated trade treaties and quota systems are worked out, the fiscal bias of the party in power makes more difference than it could ever have in the past.

* * *

We could make our meaning clear by a reference to what we may call the aftermath of Ottawa. The Government started with an unreasoning faith in the possibility of improving British economy by organising Empire Trade. They rushed into the Ottawa Conference; and before they did so they raised high hopes in the people as to the possibilities. When the Conference began, the British Delegation found themselves up against any number of difficulties. But political prestige demanded that some sort of a pact should be got up. In its actual working, the Ottawa Pact has been barren of any good. The Dominions have been slow to implement their promises. And Canada has actually gone against the spirit of the Pact. When the British Government proceeded to negotiate trade treaties with the foreign nations, with whom she has closer commercial ties, she found that the Ottawa Pact was a serious fetter on her freedom to negotiate. On the one hand, there is the fear of imposing taxes on foodstuffs. On the other, the quota system is fettered by too many claimants on it. The protectionist bias and the reaction from free trade have done great harm to Great Britain. It has tended to stabilise British export trade at a too low level.

* * *

Protection is but a part of economic conservatism. Historically, its advocates have been among those who oppose the claim of the workers to a higher standard of life and the claims of weaker countries to a place in the sun, whether it be disarmed Germany or subservient India. The people of England have every reason to suppose that, if the National Government which has shown such a strong protectionist bias in the past, were allowed to continue in a majo-

rity in Parliament, it would not only increase the harm done by protectionism to British economy, but would also pursue a political policy which would have adverse effects on British trade. It would mean that at home, there would be further hardships for the working classes, partly through the pursuit of the ideas of "sound finance", and partly through the neglect of the measures that would ameliorate the condition of the masses. Abroad, the Government would accentuate the tangle of protectionist reprisals and increase political bitterness, both of which would retard the recovery of world trade and economy. It will thus be seen that the achievement of the National Government, creditable in itself, has little relevance to the policy and outlook, which the future Government must have, if Britain is to progress along with the rest of the world towards a state of economic prosperity. If the National Government is anxious to retain office, the best policy suited to that end would be to effect an orientation of its ideas rather than to think out the electioneering tactics of the future which, after all, can only supplement, not supplant, a well-considered programme for the people.

BENGAL AND THE LOWER RUPEE

If we revert to the ratio theme so soon after a lengthy examination of it in our last week's issue, it is mainly with a view to counteract the regrettable tendencies, evident in the last few days, to import an unreasonable provincial prejudice into this question. Articles have appeared in the Indian section of the daily press in Calcutta, which seek to convey the suggestion that the reduction of the rupee sterling ratio is inimical to the interests of Bengal, that the only beneficiaries of such a step are the industrialists of the Western Presidency, that they have engineered the whole agitation for their own selfish advantage and that all those who bear love for Bengal must oppose this movement for all they are worth. The atmosphere in Bengal has of late been favourable to these irrelevant appeals to provincial patriotism. We have always evinced a live sympathy for attempts to rouse the consciousness of Bengal to her backwardness in certain walks of life. And we have been prepared to recognise that in every such popular movement, it is inevitable that antipathies against the foreigner should be occasioned. Though it is desirable that attempts on the part of Bengal to come into her own should be made without causing serious inter-provincial friction, it is well that foreign communities in this province should recognise that national self-consciousness can be roused only by emphasising the large place that the foreigner has come to occupy. The friction and the ill will can be minimised if, on the one hand, Bengalis recognise the dangers of an exaggerated provincialism and, on the other, the other Indian communities admit the naturalness of the present phenomenon and actively help to make it a more transitory phase. It is in this view that we have often discussed the economic problems peculiar to Bengal; and it was only the other day that we made a special appeal for the establishment of sugar mills in this province. The conflict of interests between Bengal and Bombay arises in the industrial sphere, not so much because Bengal is unfitted for the role of an industrial province, but because she has allowed Bombay to get far ahead of her, so that in the present position the natural desire of Bombay industrialists for expansion of their sphere of activity is not compatible with the desire of Bengal to develop her own internal production. If within the next few years Bengal utilises her advantage for starting new industries this apparent conflict will disappear and will no longer threaten the inter-provincial goodwill which has been so seriously imperilled in recent times.

* * *

So far as the question of the rupee ratio is concerned, there cannot be the slightest doubt that the Bombay *versus* Bengal controversy is altogether irrelevant. No one would contend that, if the lower ratio has adverse effects on any part of the country, such adverse effects will mysteriously restrict themselves to the political borders of Bengal. Granted, for argument's sake, that the principal beneficiaries of the lower ratio are the Bomboy industrialists, the opponents of the ratio should be prepared to contend that a lower ratio has adverse effects on all agriculturists, irrespective of the administrative divisions in this country. We find that some of the supporters of the present ratio have gone to the length of suggesting that the lower ratio must hit the agriculturists. The reasoning adopted is that, as a result of the lower ratio, the agriculturists will have to pay more for the imported manufactures and will get less in terms of foreign currency for their exported produce. Nothing can be more fallacious than this reasoning. The economic history of the world during the last decade is largely, the history of the advantage of depreciation of currency and the handicaps which over-valuation of a currency involves for a country's export trade. Great Britain suffered grievously from the monetary blunder of 1924. Italy has suffered serious hardships from the determination of the Fascist Government to stick to the same level of the external value of the lira. France gave herself the first pull to the heights of prosperity, which she now occupies, through the devaluation of the franc. And now Britain, Japan and Germany are seeking to expand their export trade through the aid of a lower exchange. It need, perhaps, be explained here that, in the case of Germany, the advantage of a lower exchange is derived not from a formal depreciation of the currency but from the new system of accepting German bonds quoted in the foreign markets at a discount at their par value in lieu of payment for German exports. This, it may easily be seen, is tantamount to a depreciation of the mark and should suffice to prove our point. As for America, the one handicap which President Roosevelt threw off at a stroke without a moment's hesitation is that of the high exchange value of the dollar in terms of foreign currencies. Little argument would be needed to prove that a lower exchange helps exports. And when the export trade of India is so largely in the shape of primary agricultural produce, it passes one's understanding how a reduction of the exchange value of the rupee can hit the agriculturists more than the other sections of the population. The economic inerests of India generally, and particularly in the acute phase of the present depression, lie in an exponsion of the internal market for internal production and the increase in the prices of agricultural produce and larger exports thereof to foreign countries. In the present situation, the reduction in the rupee rate will help all these objectives admirably and at the same time.

* * *

We explained in our last issue how, without a lowering of the ratio, there could be no increase in the internal level of prices; and there is no one in India so completely out of touch with the conditions of agriculture in the country as to suggest that agriculture can pull on without an appreciable rise in the prices of agricultural produce. As for the export market, the experience of the higher ratio provides a conclusive answer to the question. If in the case of other countries a lower ratio has been of demonstrable benefit to the export trade, why should it have a different effect in the case of India? So far as the foreign markets are concerned, what matters is only the price at which an imported commodity is quoted in terms of the internal currency. And there is no economic reason why a lower exchange should affect exports of agricultural produce in a manner different from the exports of manufactured articles. Whether our agricultural exports are monopolies or whether they are sold under conditions of competition with rival producers, a lower rotio must be helpful to the increase of our export trade.

The only ground on which the lower ratio may be opposed is that it will tend to increase the prices of imported commodities. And some of the partisans in Bengal have seized this point with special enthusiasm. Arguing that Bengal is primarily an agricultural province, they have proceeded to contend that the lower ratio is inimical to the interests of agriculturists in general and Bengal in particular. At the time the Currency League was first established in India after the publication of the Hilton Young Report, these arguments were trotted out in the columns of Anglo-Indian dailes by Indians, who are scarcely distinguishable in their sympathies from Europeans. Though a general sense of the solidarity of our national economic interests kept Bengal out of the trap set for her by the supporters of the higher ratio, it is true that at that time it was generally supposed that, as against the higher prices paid for imported commodities, the agriculturist had for himself no compensating advantage. The havoc that the 18d. ratio has played upon our export trade in agricultural staples should make clear that the agriculturists need not support the lower ratio purely out of philanthropic motives.

* * *

There is one other point we would wish to press in this context. During the past few years India has seen the entry of more competitors in her export markets in lines in which she had formerely all her own way. In the intense economic nationalism of these days, we have ultimately to look for a greater degree of self-sufficiency thon obtains at present, which means that the internal market for our agricultural produce should be expanded, in consonance with the difficulties we are experiencing in disposing of our produce abroad. And how is the internal market to be expanded unless the industries of India are enabled to consolidate themselves and rise to their fullest possibilities.' It may suit provincial partisans to set Indian agriculture and Indian industry in a juxtaposition, suggestive of conflict. But in no long view of the economic interests of India can such a conflict have any tinge of reality.

* * *

The bogey of agricultural interest may thus be disposed. There is reason to think that many leaders in Bengal, who should have known better, have been stampeded into support of the higher ratio by persons who seek to thrive on an exaggeration of provincial antipathies. And it is comforting that such leaders are now recoiling from their rash step, when the implications of their standpoint are pointed out to them. It was only the other day that *Forward* pointed out in a leading article that no one, who has given general support to the political demands of the Congress and the economic view points urged by the Federation of Indian Chambers of Commerce, can possibly give support to the mischievous agitation which is now afoot in Bengal. An examination of India's balance of trade in merchandise and treasure during the last two years will show that support of the higher ratio means an attitude of utter indifference to the sustained flow of gold exports out of the country and a negation of the demand for India's self-sufficiency in regard to manufactures. We only hope that a clearer appreciation of these facts will at least have the effect of keeping men of acknowledged nationalist tendencies out of this agitation.

* * *

We might add a word about the difference in the position of the Currency League as it stood in 1926 and as it stands to-day. Then it was thought that the lower ratio was an exclusively Indian interest and that the interests of British industrialists in India were with the higher ratio. Barring one or two well-known exceptions, Europeans stood solidly behind the 18d. ratio ; and the Government hod little or no incentive to examine the question fully. But on the present occasion there is substantial agreement between European and Indian commercial opinion ; and some of the most prominent members of the European business community are now active members of the Currency League. It is a somewhat tardy recognition of the fact that the ratio is not guided in its effects on men by the colour of their skin or the land of their birth. Let us hope that, on this occasion, rendered unique by agreement between European and Indian opinion, the Government of India will muster courage and force the autocratic Secretary of State to give in to the true interests of India. "Eaverdropper," who wires the week's Gossip from Simla, refers to a report that the Government of India have already submitted their opinion in favour of the lower ratio and that the Secretary of State has unceremoniously turned down their recommendations. Despite this report, we have reason to think that this time the agitation for a lower ratio has told on the authorities both here and in London and that the cry of the Currency League will not be a cry in the wilderness.

DISARMAMENT ALIVE?

Though it is idle to speculate upon piebald items of news, its character compels notice. Sir John Simon's speech on Disarmament in the House of Commons has earned satisfaction in Paris, and friendly reception in Berlin. If the hope of Germany's return to the Geneva fold, thanks to the progress in European Chancelleries to engineer it, should prove true, nothing better can be desired for the peace of the world. The French have been adamant against any *tete-a-tete* with Germany. Even after the formation of Sarraut Cabinet, the French stuck to this attitude. It is glad news, therefore, that their opposition to such a course has thawed a bit. Coming as this event does in the wake of General Goering's talks with Signor Mussoloni, it is to be presumed that France has climbed down more to placate Italy, in whose good grace she likes to dwell, than to please Germany. Another factor in the easing of the tense situation, caused by Germany's exit from Geneva, is Baron Von Neurath's recent speech, which is generally regarded as an olive branch. But, Germany is in the throes of a general Election. Though the result is a foregone conclusion with Herr Hitler on the crest of a popular wave, German diplomacy cannot come to grips with the Disarmament question, until the froth of election subsides. But, it is very reassuring that France should agree that Germany's return to Geneva is essential.

* * *

It is, however disconcerting that, while Italy should be anxious that international discussions should be resumed, she should prefer the Four-Power Pact. It is clear, by now, that Italy and Germany are hand and glove with each other. The elbowing out of the League of Nations is to take the hand of the clock back. It is obvious that Italy shuns the League, for fear of being in a minority there. But, the Four-Power Pact, though a ten-year pact, assures her a solid equality. Germany will swim or sink with Italy. As for France, she can be hedged between Italy and Germany, and compelled to be more accommodating here, than in the League of Nations. Britain will, as usual, sit on the fence, until her self-interest induces her to take up a definite line of action. So, the idea of trotting out the Four-Power Pact is to secure a favourable environment for Italy and Germany. But, it is to be feared that this manouvring cannot but end in a fiasco. It is not advisable to take further chances with the all-important question of Disarmament, and the proper place for evolving a formula, if it should have any chance of its being observed, is the League of Nations. It is significant that M. Paul-Boncour, the French Foreign Minister, made a statement to the Foreign Affairs Committee of the Chamber of Deputies, that the "Disarmament convention will only come into force with the signature of Germany and the certainty of its observance."

* * *

As though by way of commentary on Italy's preference for the Four-Power Pact, an apparently inspired article in *La Tribuna* declares: "These Geneva institutions have no further value." It denounced the "international perambulations" of Mr. Arthur Henderson, and described Sir John Simon's speech as a "repetition of Britain's usual hypocritical claim that she has done all that is possible for the reduction of armaments." It is now clear, therefore, that there is no love lost between Italy and Britain, apart from the merits of the criticism of the British claim. Hence, if the stage is set on the Four-Power Pact for Disarmament discussions, France and Britain will, in all probability, pair off, as against Italy and Germany. What is the good, then? The gain for the Fascist Powers will be to bamboozle France into some sort of agreement, and isolate Britain, or to put the blame of the failure of Disarmament at the door of the two greatest Colonial Powers, Britain and France, and thus save the face of Nazi Germany. Whether Disarmament is achieved or not, the Four-Power Pact is surely in the melting-pot, if the question of Disarmament is taken there, instead of to the League of Nations.

(*Continued from page 1110.*)

attenuating exports of gold and felt it safer to keep good reserves in England. Present easy money conditions lent themselves for cheap borrowing. From this point of view, the loan should be considered well-timed. The immediate saving to the Indian revenue in £250,000—that is the difference in the rate of interest of 6 per cent.—3½ per cent., i.e. 2½ per cent. for one year. Also in view of the projected Reserve Bank, it was as desirable to augment external assets. The terms afford a pleasing contrast to the scandalous issue of last May. The yield of 3.68 per cent. compares favourably with the last New Zealand issue. In a way, this loan reflects the psychology of the London market or, at any rate, of the technical advices to the Government of India for their operation in London.

Exchange has been quiet all through the week and since yesterday it has eased, the rate for ready delivery dropping down to 1s. 5 29/32d. It is believed that the applications for the sterling issue from India were not on any large scale. So the ease in the Rupee rate cannot, therefore, be attributed to investment in India sterling loan. For our part, we suspect that it is due to the fear that before long the Government of India would feel obliged to give in to the present agitation for the lower ratio. Notwithstanding all the assurances given by the finance Department, the market has an innate fear that the change cannot be averted. Once such feeling comes on people's minds, the natural feeling would be that if it is going to happen, who knows it may not happen soon.

The closing rates were: 1s. 5 29/32d., December T.T.; 1s. 5 7/8d., January-March T.T.; and 1s. 5 27/32d., T.T. for April-June onwards.

Bills may be quoted: 1s. 6d., for November-December.

Money was easy with lenders over. Call money quoted ½ per cent. Onemonth, twomonth and threemonth deposits were 1, 1¼ and 1½ per cent. respectively.

Clive Street Gossip

To beard the lion in its own den is quite properly deemed a heroic exploit. Inspired by some such exhilarating thought the Currency League has been organising meetings in Delhi—the centre wherein are gathered those, who, drest in ultimate authority, refuse to lend an ear to piteous appeals of agriculturists, strident demands of industrialists, measured exposition of conomists and somewhat monotonously worded representations of Indian commercial bodies.

* * *

The citizens of Hamelin, once freed from the pest of rats (without the aid of flit but with recourse to the piping of the pied piper), dared the piper to do his worst, or pipe till he burst. Sir George Schuster, saved from embarrassments by fortuitous gold exports, is no longer haunted by the nightmare of reverse councils and all the obnoxious concomitants of an illfitting ratio and has no objection to sponsors of the lower rupee crying themselves hoarse. The ungrateful population of Hamelin had their disillusionment which came to them in a most horrible way. Disillusionment awaits our smug authorities, who for the time being are propped up in hope by increasing gush of gold shipments in the last two weeks. Hamelin was bared of its rats, and children, too, at the same time. So will India be simultaneously bared of gold and currency machinery. For there can be no doubt that, as soon as the gold stream dries up, there will be a serious *debacle* in Indian monetary and currency affairs.

* * *

As one speaker remarked at the last meeting of the Currency League, not hundred Blacketts and thousand Schusters can save the nation in to-day's position of foreign trade in merchandise, once the adventitious aid of gold shipments ceases to be available. In the light of prospects so disquieting, it is amazing that there are people, who, instead of insisting on the ratio question being considered as part and parcel of the Reserve Bank proposal, talk of the need that the ratio must be changed not by the Legislature but by the executive and that in any case it must be changed overnight. But this proposal to include the changing of ratio in overnight pastime is highly intriguing and vastly amusing. We change clothes overnight from lounge suit to dress suit, from dress suit to pyjama ; but for nearly every one of us this new proposal of tacking the ratio in still and silent hours of darkness is incomprehensible. It is disingenuous to argue that the main proposal to-day is the Reserve Bank scheme, that the ratio is only a subsidiary issue, that we should not mix up the two together, and that we should leave it to a kindly and sympathetic Finance Member to do whatever he deems best at the moment which he deems best.

103, Clive Street, Calcutta.

New Zealand happens to be fashioning a central bank for itself at this very time. The wiseacres of that Dominion are not urging the need for divorcing the ratio from the central bank. On the other hand, the question which New Zealand and the Bank of England authorities addressed to themselves was this : Will the new central bank be able to provide requisite remittances for meeting foreign commitments on the basis of the existing ratio? They came to the conclusion that it could not. So they have decided to lower the ratio by 10 per cent. Let it not be forgotten that New Zealand pounds had already been allowed to fall to a discount of 10 per cent. as compared with the British pound. New Zealand is thus to have depreciation of currency to the extent of 20 per cent. Australia has up-to-date depreciated her currency by 25 per cent.

* * *

They are still claimed as belonging to the sterling bloc. Nor should it be forgotten that they were not obliged in the last decade to appreciate currency by 12½ per cent. as was the case with India. In the sterling group, Britain has on balance an advantoge of 12½ per cent. over India, New Zealand 32½ per cent. and Australia 37½ per cent. Is it any wonder then that, despite a heavy import duty, Australian wheat is being imported into India to the detriment principally of the Punjab. The agriculturists of the latter province have made a strongly worded representation to the Financial Commissioner asking for immediate revision of the ratio. Major Van Ranen, who was ever known as loyalist of loyalists has joined the Committee of the Currency League. Mr. Ramsay Scott, as representing the European industrial interests of Cawnpore, is also on the committee of the Currency League.

* * *

I had a talk the other day with a representative of Harveys of Madura who control over 5 lakhs of spindles. He is as vigorous an exponent of the lower ratio, as one might like to see. H. H. Sawyer and E. J. Bunbury of Bombay are associated with the Currency League as representing European interests of Western capital. It is clear to every one, save him who refuses to be convinced, that as regards immediate and substantial depreciation of the rupee, producers, whether agriculturists or industrialists, whether European or Indian, are of a unanimous view. I also understand that the Government of

India made a representation to the India Office that some action was necessary and that some measure of depreciation was unavoidable. The Secretary of State would appear to have told the authorities here that they might give an opinion when it was asked for. Meantime realising that they are only a subordinate branch, let them not dare be impertinent again!

If there be any truth in this report it means that the Grand Moghul in London is far more puissant than the Government of India and the people of India put together. Sardar Santa Singh, representing Punjab agriculturists, spoke in vehement terms at Wednesday's Currency League meeting. He said in effect: If anyone suggests that a lower ratio is demanded only by Bombay millowners, here am I to assert with all emphasis that agriculturists need a lower ratio more than any other section. Ramsay Scott pursued this theme farther: "If India were to go back to the old ratio of 1s. 4d. she would be on a par with America, Canada and England but still at a disadvantage compared with Australia and New Zealand. It is very significant that all these agricultural countries have found it necessary to depreciate their currencies to stimulate exports." If India does not do likewise and if gold exports stop or even fall off, India would be in the soup. I must again quote the piquant remarks of Mr. Ramsay Scott:

"Have you heard of the Abderdeen Jew who having somehow managed to get an overdraft was sent for by the bank manager? After staving off the evil day for some time, he finally came to the bank manager who questioned him about the repayment of the overdraft. The Jew's reply was 'Sir, have you ever been in the soup business?' 'Well, you are, now,' said the Jew; and if gold exports stopped, I am afraid, Sir George Schuster would also be in the soup business. Our chief object is to increase the price of agricultural produce; and the only known way is to depreciate exchange in order to encourage exports; for if at 1s. 6d. exchange you sell a maund of produce in England, the ryot gets a rupee in India but if exchange is 1s. 4d. you can sell the same maund in England for 1s. 4d. and still get a rupee in India you will naturally sell more at 1s. 4d. than at 1s. 6d. per maund. Prices would rise in this country. Supposing each agriculturist received only a rupee more each in the year that would mean 275 million rupees or 27½ crores more to spend and the purchasing power of the country would increase by 27½ crores."

Agency Terms are unique and treatment sympathetic.

THE INDIAN MERCANTILE INSURANCE CO., LTD.,

11, Bank Street, Fort, Bombay.

THE GATEWAY OF INDIA

Bombay, November 8.

The failure of Currimbhoy Ibrahim and Sons Ld., Managing Agents of a large group of cotton mills, has given room for no end of speculation, as to the future working of the mills. As was pointed out last week, the firm of Currimbhoys has mortgaged their agency commission to Sir Akbar Hydari as representative of His Exalted Highness the Nizam. It is a moot point whether the managing agency of this group of mills can be handed over to a third party; but we have a communication from Sir Akbar himself stating that he is endeavouring to save all these concerns by the formation of a syndicate to take over the managing agency of the Bombay mills of the Currimbhoy group, or some of them by other means. We have also the information that Mr. F. E. Dinshaw, Director of the Indian Bleaching and Dyeing printing works, has issued a circular to the shareholders of the Company, informing them that the Board of Directors has received an offer from Mr. Soorji Vallabhdas to accept the agency of the firm on the same terms as are contained in the present agency agreement. The Board of Directors has approved of the offer, subject to the sanction of the shareholders. From the side of His Exalted Highness the Nizam, his representatives have asked the Board of Directors to wait till the return from England, on November 22, of Mr. Akbar Hydari, so that a scheme may be placed before the shareholders.

But, informed opinion here is timorous of continuing to work these mills, many of which are in a moribund condition, from the financial standpoint. In fact, it is stated that a certain amount of financial liberty can be taken in the case of upcountry mills, which can put up with considerable load of debts and still show some margin of profit. To follow the same procedure for Bombay mills would be suicidal. For instance, the Pearl mills possess a first-rate plant, but the Company is in debt to the tune of Rs. 25 lakhs. It is obviously unsafe to continue operations on this unsound basis, unless a fair share capital to the extent of Rs. 15 to Rs. 20 lakhs is arranged to pay off the recently created mortgages. Fazulbhoys is another good concern, which, if liquidated, may fetch something for the shareholders, though they can well afford the risk of entrusing their fortunes to a new syndicate. Any syndicate tackling the Pabaney and Crescent mills will have to provide sufficient funds to modernise the plant. Thus, there is much truth in what Mr. S. H. Batliwala says that it would be folly to protect the present vested interests at the expense of new investors. Unless sound financial reconstruction is possible, it would not be fair to those existing investors who stand to gain something by liquidation to crucify their interests on a scrappy and patchy financial framework.

Stock Exchange Relief

Last week I adverted to the fact that the Bombay Stock Exchange has ear-marked the sum of Rs. 3 lakhs for the purchase of shares on behalf of defaulting members, who could not take delivery of shares of the Currimbhoy group of mills. But, there is some sound objection taken to this procedure. In the normal course of trading, the element of consideration is always presumed to make forward contracts valid in law. But, in their case when a huge amount of buying had resulted in heavy failures to take deliveries of shares, the essence of legimate contracts disappears from the series of transactions, which are no more than wagering contracts. Though forward contracts are presumably under the law on the floor of the Bombay Stock Exchange, the course of business must be so regulated that members, entering into sales or purchases of shares, must display their clear intention to give or receive delivery of shares whenever they are called upon to do so. But, this **bonafide** nature of deal is wanting, as failure to take delivery

of shares do unmistakably indicate. Hence, the objection is valid that the Board cannot encourage dealings and acts of the bull operators in the name of protecting the interests of the members of the stock exchange. It is also a question whether the Board can raise the subscription of membership and thereby create funds for a purpose, such as giving a measure of protection to members who are gambling in shares on the floor of the house. It is to be hoped that Mr. Jehanbux Jamshedji Patel will pursue the matter, and bring about the much-needed reform, if not for amending what has already been done in the present instance, but at least for future conduct of business in the stock exchange.

Strike in Four Mills

Close upon the strike in Ahmedabad mills on the death of Vithalbhai Patel, four mills have had to face the strike in Bombay, though on more material grounds. Over 2600 operatives of four Bombay mills struck work on Wednesday, as a protest against the further cut in the "dear food" allowance, introduced by the management of the respective mills. The heaviest incidence was in the Jam mills (Nos. 1 and 2). The mills are situated in Lalbaugh and Sewri respectively, and were closed by the management. For a similar cause, about 600 spinners of the Tata mills, at Dadar, struck work on Tuesday afternoon. That mill has also been closed since. A few workers of the Satya mills also struck work for the same reason, but the mill was not closed. As regards the Tata mills, half the strikers resumed work the very next day; the strikers in the Jam mills are still holding out, and are busy with marching processions in the mill areas, and holding meetings in the maidans.

Mody-Clare Lees Agreement

The Indo-Japanese textile agreement is still the cause for much controversy between the Bombay millowners on the one hand and the Ahmedabad millowners on the other. The Ahmedabad millowners have the support of their like in the rest of India. A very partinent objection has been raised against the Bombay millowners coming to an agreement with the Lancashire industrialists, in opposition to the millowners in other parts of India. It is contended by Seth Kasturbhai that it is only an impartial body like the Tariff Board that can say to what protection the Indian industry is entitled. When the Tariff Board has not yet published its report, it is rather off-handish for the Bombay millowners to agree to a reduction of duty. And, in the case of artificial silk fabrics and artificial silk mixture, the reduction of the present duty, agreed to, is disproportionately heavy, as it amounts to a reduction from the present specific duty of four annas per square yard on all silk goods to one and a half annas. The main objection is the forfeiture of the privilege of reciprocity, granted by the Ottawa Agreement. Last of all, when the Bombay millowners had the temerity to take such liberties, they had not the decency to insist upon Lancashire agreeing to take a definite of our cotton, in return for the agreement.

The Anglo-Indian scribes are naturally up in arms against the Ahemedabad protest. In their anxiety to espouse the cause of Mr. Mody, they have been silly to a degree. To argue that the protection, which the Ahemedabad millowners now enjoy and from which they derive so much profit is solely due to the agitation and propaganda carried out by Bombay millowners, is not worthy of any longstanding and well-established newspaper. Then again, the protagonists of the agreement try to cajole India into its acceptance, by reminding her that it would help forward the safe passage of the White Paper scheme and reduce the outcry of the political diehards for bigger and better commercial safeguards. No one would be sorry, if the White Paper scheme, which is wanted by none in this country, is scrapped without any ceremony. The new-found confidence is strong enough to endow India with the necessary patience and effort to achieve what it desires, much sooner than later. There is some sense when it is argued that Lancashire is pledged to push on with the scheme for the utilisation of Indian cotton, and her takings this season have been larger than ever before. But, the change-over from other varieties must take a long time. As regards the profit to India from the share in any marketing advantages which Lancashire is to obtain in the colonies of the Empire, where the staple products of the Indian mills are just the type of goods suited, is rather hard to follow. Not until the events bear out the promise, is it possible to be jubilant over it.

The idea at the back of the minds of the protagonists of the agreement is that India's capacity for the consumption of cloth is enormous. They point to the year 1914, when the consumption was 4,000 million yards, and all these years the population of India has been increasing by leaps and bounds. By progression, it is perhaps their idea that considerably more than 4,000 million yards can be consumed, if only India had the requisite purchasing-power. But, they fail to understand that the Indian mills are already turning out as much as 3,200 million yards, and it is not known what exactly is the output by the Charka and the hand-loom. As the short-staple cotton of India is better suited for the charka, rather than the spindles of a mill, it is bound to gain in the long run. It is imperative, therefore, to institute enquiries into the actual output of the handspuns, before giving away quotas to foreigners.

Just as, on the arrival of the Japanese delegation, an atmosphere was sought to be created here by broadcasting that Japan was deliberately curtailing her trade as a help to her advocacy for concessions, now on the eve of the Indo-Japanese agreement a different stunt, but towards the same end, has been raised. The new Japanese Foreign Minister is reputed to regard the trade dispute with India as a political rather than a commercial question to lead Japan to believe that the real motive behind it is England's desire to further sanctions against Japan, because of her rejection of England's advice in regard to her policy to the League of Nations and the Lytton Commission's report on Manchuria. The theory is absurd on the face of it. To believe in the theory is an insult to one's intelligence. Surely, Japan's statesmen are made of better stuff.

It is refreshing however, to find the agriculturists possessing harder commonsense than the millowners of Bombay. Sardar Ujjal Sing, M.L.C., one of the leading cotton-growers of the Punjab, warns that the quota must not be fixed at a figure which would make an additional import of Japanese piecegoods into India injurious to the Indian mill industry, which consumes Indian cotton, thereby making the cotton-grower lose a sure customer, in return for another, who may give up her cotton at will. That should be the angle, from which this whole question should be viewed, rather than make a sorry bargain, or a humiliating surrender. It is more profitable to look to the domestic consumption of Indian cotton, and practise planned economy in the cultivation of it.

OLYMPUS

(From Our Correspondent)

New Delhi, November 7.

Will Reserve Bank Bill go through the Assembly?—Doubts expressed by high official—Secretary of State the strumbling block to settlement. Sir George Schuster's fluid opinion—Funking the city and flattering the Assembly—Financial issues confused with political—Indo-Japanese talks—Turn for the better—The sacrifice of raw cotton—Japan sympathises with India. But John Bull is the host to reckon with.

"I doubt if the Reserve Bank will get through the Assembly", told me a very high official. His fear, he told me frankly, was that the secretary of State would make it impossible for them to make any concession necessary to carry Indian opinion with them.

* * *

This also is the impression of those Members of the Assembly who are now working in the Joint Committee. They discuss, they settle; but every thing they do is always "provisional". The Secretary of State is communicated the purport of the proposal; and he turns them down.

* * *

The only chance the Government of India have is that this interference of the Secretary of State may not become generally known and that the Assembly, as at present manned, may be able to back the scheme.

* * *

Sir George Schuster has fluid opinion on the subject. He does not want to fight London City; he wishes to humour the Assembly which has praised him times without number. Will he be able to play the double role again?

* * *

I am told at least six minutes of dissent will be appended to the Joint Committee report. There may be more. Can a Bill, to which so many dissenting minutes are appended be said to command "general support" of Indian opinion? That will be the dilemma of Lord Willingdon's Government.

* * *

Even the uninitiated members of the Joint Committee are becoming educated as to the significance of the controversy. The more they discuss, the more they realize the gravity of the issues involved and the world of difference between what Sir Basil Blackett conceded and what Sir George Schuster is asking India to accept.

* * *

Unfortunately some Members have been side-tracked by interested parties to raise the constitutional ssue. They threaten the Government that they will recommend the Assembly not to proceed with the Bill, if the constitutional issue is not cleared up to their satisfaction. This strategy will suit the Government best. It will mean that the politically loyal elements will rally round Sir George Schuster and the financial issue will not get a fair consideration.

* * *

This plan has been devised apparently by those who committed the blunder of signing the London Committee's report. They do not want a censure passed on them by the Joint Committee in India. They would make them side-track the issue. But there are a number of Members on the Committee including that shrewd man, Mr. B. K. Basu, who will not allow the Committee to lose its bearing. The fight must be centred on the issues raised by the Bill. The constitutional fight can be fought on another platform.

Government side is certainly afraid of facing the Assembly and the opinion expressed to me by the high official expresses their genuine fear.

* * *

The Indo-Japanese negotiations have taken a turn for the better. The credit for this does not go to India. This was inevitable; and the two sides knew they could not break up.

The Japanese have all along felt aggrieved that India was a pawn in the British game of ousting Japanese textile interests from the Indian market. They accordingly tried to strike a hard bargain.

* * *

The Government of India in this triangular fight lost its ground. The weak must go to the wall; and the Government of India is the weaker side.

If they yield on the textile question and remove the rigid classification of the piecegoods to be imported into India, Lancashire suffers. This, the Secretary of State will not allow them to do. Then they must yield on the cotton quota. This the Government of India could; but it could be done only at the expense of the Indian cotton grower. So the cotton grower must go to the wall.

* * *

Here are some figures. The Government of India insisted that Japan must buy 20 lakhs of cotton bales in return for India purchasing 375 millions of piecegoods. This was fair to the cotton grower; it was fair to the Indian textile industry.

Sir Joseph Bhore yielded. The 20 lakhs quota was reduced to 16 lakhs and the 375 millions were pushed up to 400 million yards. Japan still protested.

* * *

Again India offered to sacrifice the cotton grower. Japan would not take more than 10 lakhs of cotton bales and ultimately was prepared to take 13 lakhs, if the Indian Government yielded on the classification of textile goods.

India had no voice in the matter of textiles. It was not merely the interest of Indian industry but of Lancashire. So the only sphere for further surrender was raw cotton.

* * *

The Japanese have every sympathy with India. They know, however, that they are dealing with Britain. India is only a subordinate branch of Whitehall. So their sympathy with India is no avail.

* * *

The Indo-Japanese Agreement, will be no more than a "Gentleman's Agreement". Its diplomatic effect will begin only when Britains signs the treaty. Sir Joseph Bhore has no diplomatic status. India is not a sovereign power. She has not even the experts to draw a commercial treaty. But Sir Joseph Bhore in his personal capacity deserves every compliment that can be paid to a national leader. He battled against London's interference. If he had his way, he would have settled an Agreement which would have redounded to the benefit of India and to the credit of the Indian Commerce Member.

* * *

However, the Japanese will leave India happy that they have made friends with a country which must one day grow into a great Power. They made every effort to make the present negotiations a success because they valued India's good will: But at present the accounts have to be reckoned with John Bull.

SOUTH INDIA

(From Our Correspondent)

Madras, Nov. 8.

Madras has had the distinction, perhaps questionable, of electing the first European Mayor of a Metropolitan city. According to a convention, by which the Mayoralty of Madras rotates among the principal communities of this City, this year the councillors were bound to elect a Christian for the Mayoralty; and it was a straight fight between Mr. W. W. Ladden and Mr. Chakkrai Chetty an Indian Christian. The past politics of Mr. Chetty has apparently been a point of great vantage to his rival. And no one can doubt as to where the choice should lie, if it is an alternative between a respectable European businessman of long standing and an Indian politician with more than one political somersault to his credit. And so the Kumar Raja of Chettinad vacates the Mayoralty chair for Mr. Ladden. Considering the amount of bad blood that is created in your City by the virtual monopoly which the Congress has come to enjoy over the civic headship of Calcutta, it is well that Madras has been able to work under a convention which, in spite of obvious handicaps to this or that community has, on the whole, gained a basis on which to work amicably. No doubt, many would wish that Madras, too, was able to keep the Municipal Corporation from that touch with Government officials which Gandhiji has rightly denounced to be a source of much contamination to our political life. But the experience of Calcutta shows that, so far as the political work is concerned, the stronghold of the Mayoralty is of little or no advantage. When it is certain that the control of the Municipality will not make much of a difference in the struggles between the Congress and tht Government, it is well that the City Fathers should try to secure mutual good feeling and concord. It is a great relief to think that an occasion, on which a member of European business community is elected to the headship of this City, should create great ill feeling and even induce members to enthuse over it as an event of first-rate significance. Provided Mr. Ladden will not lose his position in the Corporation as to respect of the political susceptibities of his constitutents in matters in which they are relevant, there is no reason why the election of an European Mayor should not be the beginning of a new era of communal concord in Madras.

The visit of His Excellency Sir Frederick Sykes, the retiring Governor of Bombay, to Mysore will most probably include a trip to Gersoppa Falls, which are undoubtedly the grandest sight in that picturesque Native State. And very probably it will also help the progress of the scheme for generating electric power from the Gersoppa Falls. The scheme has been under consideration of the Mysore Durbar from as early as 1917; and now though probably financial difficulties still remain to be overcome, some of the necessary preliminaries for the prosecution of the works have been completed. As both the governments of Bombay and Mysore have rights in the river Sharavati, it was necessary to observe the changes in the discharge of the Falls at various periods of the year so as to determine the amount of water that Mysore could utilise for purposes of generating electricity without hitting the Bombay Government too hard. With a view to ascertaining this, it was agreed in 1931 between the Governments concerned that a gauging station should be established at Seetha Katte in order that the gauging operations can be carried out during the twelve-months. Arrangements were also made for taking a series of photographs of the Falls from time to time whenever it appeared that there was a material change in the river discharge. The Mysore Government completed, without delay, the masonry work and the super-structure of the measuring weir, with which detailed operations have been made jointly by the officers of the two Governments deputed for the purpose. As against the one year originally contemplated, the gauging operations have been extended over two years in actual practice. And when it was felt that the recorded observations are sufficient for the purpose, they were reviewed by officers of the two governments during a joint inspection. And the following recommendations *inter alia* have been made by the inspecting officers for the consideration of their respective governments.

(1) The Mysore Government have prepared a project for the generation of 20,000 E.H.P. At the same time, they are also contemplating to make a beginning with the generation of 10,000 E.H.P. only and develop the same to 20,000 E.H.P. a little later. They require a discharge of 190 cusecs and 95 cusecs in their Power Canal to generate 20,000 E.H.P. and 10,000 E.H.P. respectively.

The average discharge of the river Sharavati is seen to vary from about 10,000 to 2,000 cusecs during October and from 4,000 to 1,200 cusecs during November, in accordance with the rainfall conditions in its catchment. In view of the observed volume of flow during these months, it is considered that Mysore may be permitted to draw the required discharge of 190 cusecs (for the generation of 20,000 E.H.P.) from the normal flow in the river, as this draw is not likely to make any difference in the scenic effects of the Falls.

(2) The average river discharge during the month of December is seen to vary from 1,600 to 420 cusecs. The discharge in this month is important from the point of view of Mysore, especially in connection with its initial scheme of generating 10,000 E.H.P. which requires a constant discharge of 95 cusecs in the Power canal. It is considered that Mysore may be permitted to draw 95 cusecs from the normal flow in the river for power purposes (for the generation of 10,000 E.H.P.) subject to the minimum flow of 400 cusecs being maintained in the river during the month.

The Inspecting Officers are of opinion that the results of the detailed joint gauging work done during the two seasons are accurate and satisfactory and that the data on hand of the river discharges, is considered sufficient and that there is no necessity to do detailed current meter-gauging work any longer.

The Mysore Government are now engaged in a detailed examination of the scheme in the light of the recommendations made by the Chief Electrical Engineer.

The Madras Estates Land Act has during the week occasioned a more serious, fundamental, and, possibly, even bitter controversy. The Council has passed an amendment making over inam village an estate even if the grant included both the melvaram and the kudivaram and even if it be the case that the inam itself was granted to a person already in possession of kudivaram. It will probably be some time before the *pros and cons* of this question are threshed out in all their bearings. But for the present the amendment has aroused the opposition of inamdars who declare that not only does the amendment expropriate them from their rights of property in respect of their holdings but is in direct contravention of all the promises that accompanied the introduction of this measure in the Legislative Council. The *Hindu* has espoused the cause of the inamdars and has gone to the length of denouncing it as a sample of the expropriatory legislation which if left unchecked might prove menacing to all manner of proprietory rights. On Tuesday the *Hindu* published a lengthy article from the pen of Diwan Bahadur M. Ramachandra Rao setting out in detail the inamdar's point of view. The Diwan Bahadur rightly fastens on two points. Firstly, that it was never the intention of the legislators which enacted an earlier Estates Land Act to bring the inam indiscriminately under the category of estates. Secondly, that in every earlier stage of the Bill now before the House the spokesman of the Government both of the

Reserve and the Transferred Departments as also the Select Committee which examined the bill held out every assurance that the Bill was not intended to alter the existing rights in any way and that its primary purpose was to codify and redraft in a manner that the ambiguities which have led to difficulties in the past will be eliminated. Considered from either standpoint, it is only fair that the interests now affected should insist on the Bill not being rushed with this heedless haste and that opportunity should be given to the public to examine the interest and the *rationale* of the proposed changes and their implications in the political and economic life of the future. Mr. Ramachandra Rao points out that

"When Madras Act I of 1908 was passed, after a close investigation of the position of inams in this Presidency the Government and the then legislature gave statutory recognition to this principle and brought within the definition of estates only inams in respect of which the melvaram was granted to a person not owing the kudivaram and inams which were grants of both the melvaram and the kudivaram or the full interest in the land were kept entirely outside the purview of Madras Act I of 1908. In other words, inams of the former character were put in the same category as permanently settled estates and the occupancy rights of the ryots in both classes of estates were declared and confirmed by the legislature. Even in regard to inams which came within the purview of the Act, it was enacted that on a surrender or abandonment by the ryot of his interest to the inamdar, the property so surrendered must be treated as the absolute property of the inamdar."

In the various draft bills which were prepared by Government from time to time for amending the Act there was no suggestion that the distinction between the two classes of inams was to be abolished or that every inam village is to be considered as an estate within the meaning of the Estates Land Act irrespective of the nature and conditions of the grant. In the Bill of 1922 it was expressly drafted that where the entire kudivaram interest in any land in the village vests in the inamdars, such lands have ceased to be part of the estate. As for the proposal now before the Legislature, it is significant that in defining the Bill the Hon'ble the Revenue Member stated in explanation of the scope that the Bill aims only at removing certain defects which have been found in the existing Act. It does not aim at conferring any new rights upon either zemindar or ryot. It does not aim at placing any disability on either party. In the Select Committee even drastic changes were considered undesirable and the following remark was made: "We consider that it is undesirable to make so important an alteration in law in this respect and therefore decided to retain the existing Subclause B." Again in presenting the report of the Select Committee on the present Bill the Hon'ble the Revenue Member stated the Bill "does not confer any new benefit or take away the existing rights in property." The public had therefore no reason to believe that the policy of not interfering with existing rights would be departed from. There can be no question that when all inams are brought indiscriminately within the scope of the Estates Land Act, the marketable values of inams will be considerably affected. The only exception that has been made is in favour of rights established in a judicial court. But in actual working the uncertainty of legal processes could deprive the exemption of much of its value. In discussing the question whether the old law should be left unchecked or not, there is indeed much pother about expropriation and the danger of village to communistic tendencies. The average citizen will be tempted to view the present agitation with suspicion if it continues to harp on the sanctity of proprietory rights of tenancy and cultivation. Nor could one agree with the Diwan Bahadur that the restrictions placed on the competence of Indian legislators in respect of proprietory rights by the White Paper should be respected. But there is a strong *prima facie* case against Government departing so suddenly from the repeated assurances it has made in respect of a piece of legislation which affects large vested interests. It would be quite a different matter if the amendment is proceeded with after it has been established in open public discussion that it is substantially in favour of the large public interest that it should be effected. There is, however, another point which has a large place in determining the sympothies of the average man and that is that the interests which have sponsored the present amendment are zemindary interests as distinct from the interests of the inamdars though both will be ordinarily clubbed together as landlords. The real reform has to be done more in respect of the grievances of tenants in zemindary areas than in respect of legal changes of holders of inam lands.

GREAT BRITAIN

PARTY MANŒUVRES

The Government's reverses at the East Fulham by-election have induced thoughts of the next general election in the minds of Mr. MacDonald and his colleagues. The verdict of East Fulham is, no doubt, far from unequivocal. It has been variously interpreted by various sections of the press. The *Times* attributed it to the deferential qualities of the rival parties as effective public speakers, and to the inferiority of the electorate organisation of the Conservatives to that of Labour. There is at the other end, the *Daily Mail* which sees in the defeat of the Government candidate a vote against the India White Paper policy. The *News Chronicle* regards the verdict of East Fulham as being decisively cast in favour of better houses in preference to bigger battleships. Leaving aside the palpably absurd obsessions of the *Daily Mail*, and the trivialities of the *Times'* interpretation, there is, it may be said, general agreement that the by-election at Fulham marks the beginning of the revulsion of popular sentiment against the National Government. The Premier is already oppressed with a sense of disquiet, owing to the recent developments in regard to the Disarmament Conference and the unsparing attacks of Mr. Lloyd George. The MacDonald Government is restless lest it should come to signify in the popular mind a policy of apathy, bordering on antagonism, towards the ideals of world peace. There is also the danger that, when labour takes up its election seriously, it has ample material to prove the charge that the Government have been callous to the interest of the working classes.

The Premier's Claims

Mr. MacDonald has, therefore, been recently at pains to answer such charges almast by way of anticipation. At a meeting at Crawley Mr. MacDonald emphasised that the National Government's policy is based on one common object, the restoration of the prosperity of the country. He claimed credit for the decline in the unemployment figures and suggested that there was no reason why the decrease, that had taken place in unemployment, should not continue. He took the opportunity to deny the reports that Government intended to reduce the period of Unemployment Insurance Benefit from twentysix to thirteen weeks; and though he was not prepared to say that the work that the Government did might not have been done a little quicker than it was, "the Government would be able to go to the electorate and claim that it had fulfilled its promises of 1931."

Mr. MacDonald answers Mr. Lloyd George

As for the lukewarmness towards disarmament his remarks are obviously a direct answer to Mr. Lloyd George's charges: "I see many people are talking about broken pledges," said Mr. MacDonald, "I should like to examine those pledges, to have a survey of the great contributions which this country —not only one Government but every Government —has made to the pacification of Europe. They say we have never disarmed. Have they never heard of the London Naval Treaty? That, surely, was disarmament, and those of us who were concerned in it are being blamed because we have gone too far. We have reduced our Army, we have reduced and kept down our Air Force. Why are people forgetting that?"

The developments in the Lancashire textile industry are interesting in as much as they point to two different directions. In the earlier part of the week it was learnt that the Chinese Government had placed orders for thousands of pounds of equipment for a number of cotton mills with the textile machine manfacturers of Lancashire, and the engineering companies of Midland. A leading textile expert has also been appointed as technologist by the Canton Government; and before leaving he stated in an interview to the press that though his contract with the Canton Government was for two years, he expected to remain in China on this task for a much longer period. It may be guessed that the objective of the Chinese Government in the present move is to make China independent of Japanese supplies in the matter of cotton piecegoods.

Merger Movement in Cotton Industry

The other development is with reference to the cotton mergers, progress in respect of which was reported in these columns sometime ago. It is understood that discussions took place between the Master Cotton Spinners' Federation, the Bankers Industrial Development Company and the Lancashire Cotton Corporation to evolve a scheme which will put an end to overproduction and selling at remunerative price. It is understood that the proposals now under discussion are to amalgamate the mills into combines so that all the units will produce the same qualities and in numbers of yarns. The general impression is that the movement towards mergers had gained strength during the past few weeks; for on the present occasion efforts made in this behalf are inspired with the confidence of the Agenda at the success of the spinning section in bringing about a similar scheme.

Coal Scheme and Threat of Strike

The question of formulating a scheme for the pooling of coal for export purposes and imposing it on the interests concerned has during the week entered an acute phase. The Cabinet had a long sitting over this question and, it is believed, that the Cabinet has decided to introduce legislation dealing with the problem of coal exports. The details of the new legislation are not yet known and probably will not be, till the meeting of Parliament. The latest plan for removing the difficulties in the way of coal quota agreement is the allocation of production in each district and even each colliery. But this has been still awaiting the approval of South Wales. Towards the end of the week, Mr. Ernest Brown, the Minister of Mines, met the representatives of the national Executive and the Mining Federation at the Mines Department. The Federation had put forward proposals for the establishment of a nationalist power for the regulation of wages and settlement of trade disputes to replace the existing method of settling this question on a district basis. Mr. Brown is believed to have expressed general approval of the latest proposals. If these proposals should be finally adopted it would be necessary to amend the Coal Mines Act of 1930 with a view to impose upon the Board of Trade an obligation to set up a National Board meetings of which would perforce have to be attended by national Associations of Owners and Workmen and parties to any dispute. The owners are strongly opposed to these proposals and they urge that, in view of the difference between district and district, and the difficulties of working conditions consequent thereon, any generalisation of wages would be impossible and, if insisted upon, would particularly hit hard the weaker mines. The Minister of Mines had for a long time maintained an attitude of utter impartiality, but only in the hope that an amicable agreement would be arrived at between the owners and the workers. But as pointed out in these columns before, delay in the settlement of the coal disputes would involve the danger of Great Britain having to forego the very valuable advantages that have been secured to the coal trade by a series of treaties, particularly with

Air Mail Week

those of the Scandinavian countries. But Mr. Brown is evidently not prepared to grant in full the demands of the miners, because of the opposition of the owners being very persistent and a spokesman of the Government will have to think twice before throwing the weight of his support all on one side. Towards the end of the week, it is believed that the Miners Federation are contemplating a very serious and drastic step of a nation-wide strike, should the Government fail to see its way to securing the full demand of the Federation. A last minute attempt at peace is, however, being made and the Federation has appealed to the Prime Minister for personal direction. If Mr. MacDonald should fail to satisfy the miners, it is more than probable that a national conference of the Federation will be called and as the district associations are solidly behind the Federation it is possible that a strike will be decided on.

UNITED STATES OF AMERICA

"RUBBER DOLLAR"

On Sunday night, President Roosevelt announced in a broadcast talk his monetary plans to America and the world. It was not anything like cutting the Gordian Knot. It may be said that President Roosevelt is still lingering on the banks of the inflationary Rubicon. None of the outstanding monetary problems have yet been brought nearer solution. The doubts and uncertainties still continue. For the plans promise nothing more than immediate establishment of something approaching a free gold market, leading by gradual and uncertain steps to a commodity dollar. It is obviously in furtherance of the President's idea that a sound currency is one which is necessarily managed, and managed with a view to ensure that it will be worth as much 10 years hence as now. It is, therefore, to be supposed—and evidence in support of this supposition is not lacking—that the Government regards the purchase of gold in world markets at varying prices as a means of restoring prices to the 1926 levels and the maintenance of prices at that level in the future. The Reconstruction Finance Corporation, which is entrusted with the purchase of gold, will very probably vary the price at which it would buy newly mined gold in America as a means of controlling the internal price-level. The Government, for their part, would regulate the exchanges through changes in the price at which they would offer to buy gold in the world markets. With twin operations of this kind, both the external and internal value of the dollar will be regulated, according to the present policy of the Government. And it might be pointed out that a dollar so regulated answers Professor Irwin's description of the "Rubber Dollar." Practical feasibility of these proposals may not be readily granted. The increase in the official price of newly mined gold would, by itself, be powerless to alter the internal level of prices. For America's annual production of gold bears to the total monetary stocks in that country a ratio of 1 to 100. And at present there is apparently little idea of paying for the gold with additional currency. On the day on which the purchase of gold by the Reconstruction Finance Corporation began it was made clear that the payment will be made in 90 days Debentures which are marketable and readily saleable and which bear interest at the rate of quarter per cent.

Thus, even the little inflationary effect of an actual kind has been avoided, owing to the fear of the R.F.C. that under the law it is not open to them finance it in any other way. As for the official gold price abroad, it is clearly the means of depressing the exchange and obtaining all the benefits of exchange depreciation. President Roosevelt may, therefore, be said to be relying still on exchange depreciation for further progress of his experiment. If the raising of prices by about 40 per cent. is to be achieved in great part by the depreciation of the exchange, then the danger of the gold countries being forced off the standard will arise and, in that event, the present policy will lose its usefulness. For the present, however, there is no reason to think Mr. Roosevelt intends to rely only on the gold policy for seeing his recovery programme through. All that he seeks to gain is a tactical advantage as against both the inflationary and the anti-inflationary groups. While, on the one hand, his broadcast speech on Sunday may be said to have alarmed the anti-inflationists without satisfying the inflationists, the fact is that the inflationists hail the announcement as a victory for their cause and the anti-inflationists welcome it as signifying a stand against inflationism.

We may now proceed to note the new gold policy in its actual working during the last three days of the week. It was put into force for the first time at 10 a.m. on October 25 when the price at which the R.F.C. would buy newly mined gold was announced at 31.36 dollars as compared with the previous day's market price of 29.80 dollars per fine ounce. That the increase in price of 1.56 dollars is regarded alround as too small a rise is sufficient justification for the faith that by these gradual steps the President would be able to bring round the two opposite schools of thought in regard to the question of the pace of inflation. The public is also prepared for further increases in the price. On December 26th the price was declared to be 31.54 dollars and on October 27, 31.76 dollars per fine ounce. The foreign exchange market was considerably disturbed on the day the new gold policy was first put into effect. Francs followed the gold price very closely,

DESHERGER SEAM COAL

(SUDI COLLIERY)

Certified by the Indian Selected Coal Grading Board and by the Government of India Test House, Calcutta.

FORMULÆ:

Moisture	2·07%
Volatiles	33·40%
Fixed Carbon	57·55%
Ash	9·05%
Nature of Coke	Coking
Colour of Ash	Buff
Calories per gram	7,591
B. T. U. per lbs.	13,664

"Desherger Seam Coal" suits all Indian coal requirements, and makes it unnecessary to import from foreign countries.

Proprietors:

Messrs. MORARJEE MULRAJ & CO.

Air Mail Week

the closing quotation on October 25th being 5.89 whereas on the basis of the new gold value of the dollar the rate should have been about 5.90. As may be expected, sterling was not so strong as the franc and closed at 4.76¼ against 4.76 on October 24. The sterling franc rate on that date closed at 80.90 as against 81.93 on the previous day. Following the early appreciation of the franc, the sterling price of gold rose by 2sh. to 130sh. 1d. per fine ounce. On a franc rate of 81⅜ this meant the premium of 11d. which shows a rise of 3d. on the previous day. It is interesting to point out that on the basis of a dollar price of 31.36 dollars per fine ounce and a sterling price of 130sh. 1d. the sterling dollar rate should have been 4.82¼, while at the time of the fixation of the American price the market rate was about 4.75. The following remarks of the Financial News will be found to be of interest.

"The London fixing price of gold is, however, a somewhat misleading basis of comparison, since it is cauculated on a franc rate which may no longer be effective when the American price is fixed, *i.e.*, at about 3 p.m. (Greenwich time).

The franc rate on which the London price was fixed yesterday was 81⅛. By 3 p.m. the franc had appreciated to 80¾, and on the correspondingly higher value of gold in terms of sterling, namely, 131sh. 1d. (including the same premium of 11d.), the American price indicated a sterling dollar rate of 4.78½, *i.e.*, closer to the actual market rate than the parity indicated by a comparison based on the respective fixing prices in London and New York.

Assuming the franc to open this morning at 80 25/32, the cross rate indicated by last night's New York closing quotations for francs and sterling, and assuming further the premium in the gold price over the franc parity to remain unchanged at 11d., the London price of gold this morning should be fixed at around 130sh. 10d.

The following table shows what, on this basis, would be the sterling-dollar parity indicated by various American gold prices within the range of $31.35 to $31.65 per fine ounce.

American price per fine ounce in $	Corresponding £—$ parity
31.35	4.79⅛
31.40	4.79⅞
31.45	4.80⅝
31.50	4.81⅜
31.55	4.82⅛
31.60	4.82⅞
31.65	4.83⅝
31.70	4.84⅜
31.75	4.85⅛
31.80	4.85⅞

Business reports are very indecisive. Sales of automobiles for the month are slightly lower than for the month of September, though they are above expectations. Manufacturers are concerned about the ability to maintain the volume with the new models scheduled to appear soon. The cigarette output during September was 9,527,000 against 3,310,000 in that month last year. According to the *New York Times* the principal steel companies have lowered the price of rails from $40 to $37.50 per ton. It is understood that the Government is considering the granting of loans to growers of cane and beet sugar. The idea is to raise prices. The granting of loans is conditional on the production control arrangement being observed, under which growers are not to expand acreage.

FRANCE

FALL OF THE DALADIER MINISTRY

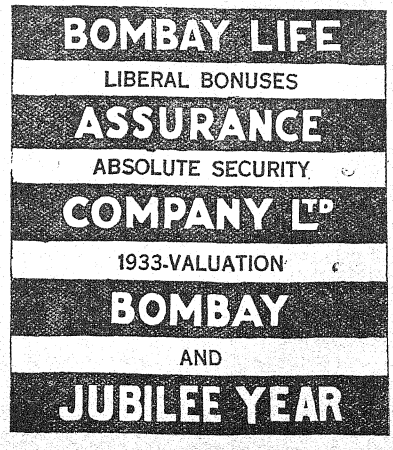
Civil Service, as expected, drove M. Daladier out of power, than whom France could hardly have a better Premier. He was moderate in expression, and yet firm in his resolve. His spirit of compromise was his undoing. He alienated the sympathies of part of his own following, owing to his continual negotiations with the socialists, in granting them not only the deciding, but even the initiating, voice. So, when the fatal division, in spite of a reduction of 209,000,000 fr. by the Committee, came, on the vital article of the Financial Reform Bill, that for cuts in Civil Service pay and pensions, 25 of the 46 members of the Gauche Radical group voted against the Government, despite the fact of two Cabinet ministers belonging to this group. This betrayal was set off by a cleavage among the socialists themselves. In fact, M. Daladier's pathetic, last-minute appeal did but provoke a bitter squabble between the two socialist factions, under the respective leaderships of M. Blum and M. Renaudel. M. Blum declared that he would vote against the Government, and M. Renaudel retorted that he would vote for the Government. Twenty-seven of his colleagues followed his lead in the division. But 11 other members of the Socialist group and 4 of M. Daladier's own party colleagues abstained from voting.

Thus, shortly before 3 a.m. on October 23, on the crucial clause in the Finance Bill of cuts in the pay and pensions of the public servants, 91 of the 130 international Socialist Deputies cast their votes against the Daladier Ministry, which was defeated by a majority of 88 (329 against 241). The Ministry immediately resigned.

As prayed for, the franc failed to collapse to 86 or 87. While external factors were being looked for to achieve the result, strangely, from across the Atlantic, Roosevelt's "managed currency" statement did the contrary. Dollors, instead of francs, began to sell from Paris. The day after the defeat of M. Daladier Government, the franc did weaken to 83⅜ at the outset, but it rallied to around 82⅜ and closed steady. Inflationistic tendencies in America put up the back of the franc. But, the sharp fall in the franc at the outset was considered to be due to positive confidence in the sterling, rather than to any exodus of French francs.

It is well worth repeating the gist of the speeches of the three Ministers, most concerned with financial proposals, on the eve of the final debate, in order to understand, clearly, possible repercussions, later.

M. Georges Bonnet, the Finance Minister, said the alternative to balancing the Budget was a resort to borrowing, and he did not think it could be done. France, he said, was at the financial cross-roads, and might easily find herself in a perilous position. The path to safety depended on the will of Parliament. The ultimate sacrifices would be all the harder if



Air Mail Week.

they hesitated. Already there were ominous signs of speculative anticipation. He emphasised the importance attached to maintaining the Gold Standard. M. Bonnet said that in the past they could afford to hesitate, but it was not policy to do so now. "We are defending what we hold dearest in the world," he said, "labour and thrift and the independence of the State."

M. Lamoureux, the Minister of the Budget, made a strong appeal to the Chamber to approve the Government's proposals. "Grave uncertainty hangs over the franc," he said. "Supposing the dollar and the pound were shortly to be stabilised, if our budget is not balanced the pound and the dollar would be more stable than the franc and capital would leave France. The future of the franc depends upon the balancing of the budget."

In a last appeal to his Party on Saturday. M. Daladier declared that unless his Budget proposals were aicepted the situation of the franc would soon become as precarious as it was in 1926. He said that France was being attacked in certain foreign markets and false rumours were bting spread that the Government intended to abandon the gold standard and put an embargo on the gold of the Bank of France. "On Friday, 200,000,000f. in gold were withdrawn from the Bank of France," he said. "The foreign offensive might very soon attain the proportions of an avalanche and carry away with it the stability of our currency. Then we would have to go through once more the days of 1926, through which no Frenchman, whatever his party, wants to live again." Energetic measures were necessary to restore more confidence, not in France herself, but to put a stop to international speculation. The Government would not have inflation in any form, and the Budget must be balanced. The Premier added that no Party at this moment should be considering whether to bring down the Cabinet or not, but should be concentrating its attention on the means whereby France's financial system might be saved from catastrophe.

After the resumption, the Premier made a final appeal. Then followed a further suspension at 11-30 p.m.

M. Daladier said that the Chomber must vote Article 37 or overthrow the Government, Reuter reports.

In proposing, under Article 37, to cut State salaries and pensions, and to tax staple private salaries, the Government had not acted gladly, but had obeyed an imperative necessity.

The franc was still the soundest currency in the world. It would remain so if the country held good. But the franc had already been attacked in New York and London. What was required was a balanced Budget. "We have a horror of inflation," he said.

In Great Britain and the United States, in spite of currency devaluation, a terrific reduction of expenditure had been found necessary.

France had already devalued her currency by four-fifths ; now she must keep it intact.

It was a cruel and thankless task, but it was necessary to demand sacrifices.

"If you overthrow the Government that will not solve the problem. The next Government will come up against the same obstacles. Will you smash that Government too? Without doubt.

"Then, are you not afraid that opinion will end by losing its self control, and then what would happen in spite of the gold with which the vaults of the Banks are bursting?

Formula to satisfy socialists?

In the lobbies attempts were made throughout the day, to find a conciliatory text for Article 37, which would allow the Socialists to support the Government. It was said that agreement was centering round a formula found by M. Lassalle, of the Radical and Radical Socialist group, which would bring to the State a sum of 1,010 million francs.

The suspension at 11.30 was decided upon to permit of a further exploration of M. Lassalle's formula.

M. Lassalle's proposal was finally rejected by 55 votes to 45, with 8 abstentions. The lessons of the Government defeat are that taxpayers will not tolerate the location of power in the hands of highly organised and actively lobbying employés' organisations, and that the socialists under M. Blum have failed to appreciate the concessions, made by M. Daladier, even in the matter of evasions and frauds in tax-collections, which was the sole excuse and pretext for the *Fonctionnaires'* recalcitrance. Whether the next administration will be more stable or not and the Budget more reliable in future, it is too much to say. Since the General Elections of May, 1932, which returned the Socialists to power, a Radical Ministry has been turned out of office for the third time. Budget crises in the French Chamber have earned the notoriety of being protracted. The new administration does not promise to falsify the tradition.

The New Ministry

On October 25, M. Albert Sarraut, Minister of Marine in M. Daladier's Cabinet, accepted the French President's invitation to form a Ministry. He is a French Imperialist, and was a successful Governor of Indo-China and several times Minister of Colonies. He is reputed to be a strong admirer of British-Canadian methods, and to have many British friends. With his brother, Senator Maurice Sarraut, he is

proprietor of the Radical newspaper, *Depeche de Toulouse*. His main task is to formulate a financial programme, that will command the support of the majority of the Chamber. According to the French Constitution, the President can order a General Election, only when the Senate recommends such a course for adoption.

But, the following official list of the new French Cabinet was issued on October 27.

Premier and Marine—M. Albert Sarraut.
Foreign Affairs—M. Paul-Boncour.
War—M. Daladier.
Interior—M. Camille Chautemps.
Finance—M. Georges Bonnet.
Budget—M. Abel Gardey.
Agriculture—M. Queuille.
Commerce—M. Laurent Eynac.
Public Works—M. Paganon.
Labour—M. Frot.
Education—M. de Monzie.
Justice—M. Dalimier.
Colonies—M. F. Pietri.
Air—M. Pierre Cot.
Merchant Marine—M. J. Stern.
Pensions—M. Hyppolite Ducos.
Public Health—Dr. Marcombe.
Posts and Telegraphs—M. J. Mistler.

The new Cabinet, while remaining mainly Radical, extends somewhat further towards the Centre than the last. Its programme is only known in embryo as sketched by M. Sarraut to members of his party ; (1) Foreign Policy.—Continuation of the policy of MM. Briand, Herriot, and Paul-Boncour. M. Paul-Boncour's attitude is well known, *viz.*: Continuation of the Disarmament Conference at Geneva ; no tete-a-tete with Germany ; diffidence towards the Four Power Pact ; and, above all, the entente cordiale with Britain. (2) Financial Policy. —The immediate urgent task of balancing the Budget.

The former Budget Minister does not find a place in the new Cabinet. M. Daladier and M. Bonnet are, respectively, Ministers of War and Finance. M. Sarraut, the Premier, starts on the assumption that economic recovery depends on the lightening of the financial burden, and he, therefore, proposes to reduce taxes, in order to render them more remunerative.

As a corollary of this, he will tighten the screw on tax dodging. Furthermore, he proposes to introduce a scheme of public work, in order to give trade and industry scope for development.

M. Bonnet said last evening : "M. Sarraut is in entire agreement with me on the imperative necessity for financial reform. It is in order to carry that out that I shall give him my devoted assistance.

On October 30, a Cabinet Council will be held to consider the Ministerial statement of policy, which will be made in the Chomber of Deputies on November 3. Much depends on the real success of M. Sarraut's "bold new plan" of reducing taxes, in order to increase them. As for the rest, to produce a balanced budget, through the painful process of fresh taxation and drastic economies, will be no easier task for the new Government than for the old.

French Revenue up

Revenue receipts for September totalled 2,857,000,000f., an increase of 347,000,000f. compared with September, 1932.

For the nine months of 1933 to date, adds the Exchange, revenue has totalled 26,222,128,600f., 1,238,692,400f. less than the estimate and 313,945,000f. less than the revenue for the same period of last year.

NEWFOUNDLAND

FINANCIAL DIFFICULTIES.

Whether a country be large or small, its troubles are as acute as any, in the present state of world trade depression. In the four years 1926-27 to 1929-30, exports from Newfoundland rose in value from $31,000,000 to $40,000,000 and the surplus of exports over imports from $5,000,000 to over $8,000,000. Even in the two difficult years 1930-31 and 1931-32, the visible surplus on foreign trade was $7,600,000 and $7,500,000 though the value of the exports fell to $33,000,000 and $25,600,000 respectively. This picture is all that can be wished for in the existing state of world trade.

All the same, the full brunt of the fall in values was borne by raw materials and foodstuffs. The country's wealth, as well as its taxable capacity, declined as a result of collapsed markets and the fall of prices, to a fraction of their former level. Newfoundland's exports were raw materials and foodstuffs. In face of the world slump, financial extravagance, which has been growing since the War, caused the present difficulties in Newfoundland. The revenue collections, based mainly on customs, fell sharply and completely overthrew the budget balance, as the following table shows :

Revenue of Expenditure in four years, ended June 30 :

	1929-30	1930-31	Estimates 1931-32	Estimates 1932-33
	$	$	$	$
Revenue ...	12,985,306	9,920,500	10,010,391	7,931,000
Expenditure	12,840,404	11,895,100	11,418,546	11,960,000

In the meantime, as revenue fell, it is claimed that immense reductions in public expenditure were made. In 1930-31, the total expenditure, apart from some $4,000,000 on the Public Debt, amounted to $11,100,000. In 1932-33, it had fallen to $6,300,000 apart from the Debt, and in the estimates for the present financial year, 1933-34, it is $5,865,000. The disparity of these figures from those in the above table, which was taken from a non-official publication, leaves one in doubt as to which is the more reliable.

But, the fact, that a Royal Commission has been sitting under the Chairmanship of Lord Amulree, since the early part of this year, to enquire into the financial position of Newfoundland, and that, during the past twelvemonths, the British Exchequer has had to come to the assistance of the Newfoundland Government, to advance part of the funds for payment of interest on the external debt of the Dominion, should incline one to give credence to the figures, given in the table. It was on the first of these occasions, in December, 1932, that the appointment of the Royal Commission was decided upon, and that the Canadian Government guaranteed a share equal to the British contribution. But, this assistance proved to be inadequate owing to con-

Air mail

tinued abnormal market conditions throughout the world, and, in June last, the British Exchequer gave aid for a second time within twelvemonths.

Public Debt

The total public debt is just under 100,000,000 Canadian dollars (£20,000,000) excluding the advances, made or guaranteed by the British and Canadian Governments during the past twelve months, and a small war debt due to the British Government. There is a total debt of $93,000,000 (£19,000,000) owing by Newfoundland to bondholders. A fourth of this sum represents Pre-War loans, raised in London, and the balance has been raised since the end of the War in England, Canada and the United States. The service of the whole debt now comes to some $5,000,000, or just over £1,000,000 per annum.

Wealth of Newfoundland

Its wealth consists in fisheries, perhaps the richest in the world. To the historic cod-fishery, hove been added the more recent salmon fishery and the less important halibut and lobster industries.

But, the pulp and paper industry has pushed the fisheries to the second place in the exports of the country. This industry was, as it were, a gift from Lord Northcliffe. In the phenomenal success of his *Daily Mail* which was organised as a vertical industry, he started early in the current century, the manufacture of his own paper at Grand Falls on the Exploits river in the eastern part of the island. Since then, another equally large mill sprang up on the West Coast.

In the South-eastern part of the island, at Wabana, there is what is reputed to be the largest iron mine in the British Empire. In the centre, there is a large zinc and lead industry.

Labrador

By a decision of the judicial committee of the Privy Council in March, 1927, the North-eastern portion of the peninsula of Labrador in the Dominion of Canada, from Blanc Sablon on the South, to Cape Chidley on the North, was confirmed as under the jurisdiction of Newfoundland. The new addition to Newfoundland territory is some 110,000 square miles. But, it is an entirely undeveloped country. Its known resources are, however, in timber and water-power. The existence of great mineral wealth is also suspected. The chief imports and exports in 1930-31, give an idea of the dependence of the island on the export of primary commodities, which have suffered most in the fall of prices :

Imports 1930-31)	Dollars
Textiles	1,681,136
Flour	2,043,583
Coal	1,628,360
Hardware	359,692
Salt pork	439,656
Machinery	1,765,361
Tea	370,901
Molasses	191,128
Exports (1930-31)	**Dollars**
Dried Cod	7,724,830
Pulp and Paper	17,134,801
Iron ore, etc.	4,235,675
Herring	324,218
Seal oil	139,683
Cod oil	404,074
Seal skins	321,942
Lobsters (tinned)	198,472

The Ottawa Conference of last year granted to Newfoundland certain important tariff concessions, notably the preferences on chilled salmon and cod liver oil, in return for a number of preferences to United Kingdom goods, which should improve the trade between the two countries.

Administrative Reforms

The island has for its Prime Minister, Mr. F. C. Alderdice, who carried a clean sweep of the country in the election to the legislature in 1932. At this hour of the Island Dominions's difficulties, his constant efforts to the completion of administrative changes have already borne fruit.

Legislation has recently been passed, in order to improve the quality of the salt cod fish industry. This was found necessary, as this monopoly of Newfoundland had to recognise increased foreign competition. For its foodstuffs, Newfoundland now depends entirely on imports. The state of affairs has to be remedied, so as to supply a larger proportion of its foodstuffs from within the country. During the last two difficult years, increased attention was given to agriculture. The vast Labrador coastal territory, between the latitudes of 50 and 60 and wholly undeveloped, should easily prove the granary of Newfoundland, under propitious circumstances, sometime later.

The results of the Amulree Commission will encourage a people, which has welcomed huge cuts in public expenditure and drastic changes towards improving the efficiency of the Administration, to renovate its economic structure, so as to weather all storms.

(*Continued from page* 1151)

nors and Members of Local Boards or their Firms beyond a certain limit. It also objects to loans being made to Bank's officers and auditors.

Regarding proxies, the Association has urged the insertion of a provision to the effect that no proxy should be valid after the expiration of six months from the date of its execution and in this connection has cited a number of instances from articles of well-known banking companies both Indian and British where such provisions exist. The Association has taken strong exception to the manner in which permanent proxies obtained by the Bank years ago are being used to defeat the efforts of shareholders for reform and has submitted that it is repugnant to all principles of efficient business that the Bank should be at liberty to use these permanent proxies without acquainting the proxy givers with the pros and cons of the matters at issue. It has also urged that Governors and Members of Local Boards should be prohibited from canvassing proxies as their influence has prevented the independent exercise of voting power by shareholders. In any event officers and employees of the Bank should be prohibited from voting or canvassing proxies and in this connection it refers to Sec. 31 of the Canadian Bank Act under which officers of a bank are not allowed to vote either in person or by proxy or hold a proxy for the purposes of voting.

The Association has submitted that those who are directors of more than twenty companies should be disqualified from acting as Governors or Members of Local Boards and in this connection it bitterly complains against the system of multiple directorships. It has also urged that Governors and Member of Local Boards who are concerned or participate in the profits of any contract or work done for the Bank should be disqualified from acting as such and in this connection it refers to cl. 77 of Table A to the Indian Companies Act which endorses this healthy principle.

Referring to Reg. 48 of the existing Regulations of the Bank under which Governors and Members of Local Boards are immune from any liability unless they are guilty of wilful act or default, the Association submits that this regulation should be removed as the provisions contained therein militate against efficiency and have been made illegal by Sec. 152 of the English Companies Act, 1929.

Regarding rights and duties of auditors, the Association suggests that the auditors should state in their report whether the transactions of the Bank have been within the powers of the Bank and that a specific provision should be inserted rendering auditors liable for omitting to state material facts in their report. It has also urged that Sec. 282 of the Indian Companies Act under which the auditor is criminally liable for making a false report should be made applicable to the Bank. Auditors should also be allowed to attend Bank's meetings and make such statements and give such explanations as they like in respect of the Bank's accounts.

Finally, the Association points out that the absence of penalties for breaches of the provisions of the Act constitutes a most serious omission in the existing Act. It argues that it is only fair that those who are entrusted with the management of the Bank's affairs and are paid for it must be liable to penalty for breaches of the provisions of the Act in the same manner in which directors, officers, auditors and servants of other banking companies are liable under the Indian Companies Act. A list of penalties which should be made applicable to Imperial Bank is appended to the memorandum.

Topical Extracts:

THE EUROPEAN GOLD BLOC

BY NORMAN CRUMP

The kaleidoscopic changes in the American situation have naturally relegated to the background the more sober course of events on the Continent, but yet events of considerable importance have lately been taking place. Early in the summer, several of the European free gold currencies displayed a definite tendency to weakness, and twice the Dutch guilder was within measurable distance of being driven off the gold standard. On July 8th, however, when it had become clear that no immediate result would be forthcoming from the World Economic Conference, the free gold countries felt the time had come to declare in unequivocal terms their determination to adhere to the gold standard and to formulate measures of mutual support; and a declaration to this effect was subscribed to at Paris by France, Italy, Belgium, Holland, Switzerland and Poland. This declaration had immediate reactions, and continental opinion has recently gone so far as to say that speculative operators in the exchange markets regarded it as the one tangible and definite fact upon which they could base their plans. Be that as it may, it coincided with a remarkable recovery in the exchanges of the smaller signatories of the Agreement, including Holland, Belgium and Switzerland. The guilder in particular which previously had been quoted against the French franc at the export gold point at which it paid to send gold from Amsterdam to Paris, at once appreciated to the other extreme of the import gold point and since then it has maintained its strength.

Now what are the motives behind this agreement? And is it likely to last? The main motive is undoubtedly fear of inflation. Most of the signatories to the Agreement have already passed through one period of severe inflation during which their currencies were reduced to a fraction of their former values, and this came as a crushing disaster to all recipients of fixed incomes. A repetition of this experience would rightly be regarded as a grave social injustice, and any Government which by abandoning the gold standard, opened the door to fresh inflation, would undoubtedly incur the resentment of its electorate and might even provoke political and social disorder. This view is felt even in Holland and Switzerland, for while these countries have not themselves experienced inflation, they have witnessed it in every neighbouring country.

Allied with this leading motive come others of an almost equally compelling character. The valuation of the franc and the lira soon after the war seriously affected the prestige of these currencies, and should it prove possible to maintain their gold value at a time when the pound and the dollar were fluctuating and depreciating, this lost prestige would automatically be regained. The recovery of prestige would restore confidence as well, which might go a long way to eradicate the present French tendency to hoard gold—a tendency which would increase enormously, if once there arose the faintest suspicion that the French Government was contemplating the suspension of the gold standard. Economically the adjustments in wages and costs which were necessitated by the fall in prices since 1928 and by the divorce of sterling from gold in 1931 have already been largely carried into effect, as is shown by the moderate revival in trade which began a few months ago. On this ground it would be suicidal to take a step which would call for fresh adjustments of a drastic and widespread character.

Politically and economically it would be both dangerous and unnecessary for these countries to abandon the gold standard, and this general view is held even in the face of the special difficulties of Holland with her impoverished East Indian primary producers, and Switzerland with her attenuated tourist traffic. Financially, there is no actual or potential threat to the gold reserves of these countries of a kind calculated to drive them off gold. Current Paris estimates are to the effect that the Banque de France holds gold which amounts to eight times as much as the short-term obligations of the Paris market to foreign centres. To-day there is comparatively little foreign short money lodged either in Holland or Switzerland, and it could all be withdrawn without causing any serious drain upon the gold reserves of these countries. The only real danger is an impairment of internal confidence, leading to a flight of capital from these countries, and here it is only necessary to point to the great improvement in confidence which followed the "gold bloc" declaration of July 8th. France, it is true, has her budget problem, but responsible opinion in Paris is inclined to minimize this, and to look for an early solution. Besides, our own experience in 1931 showed that the balancing of the budget *must* precede the suspension of the gold standard, especially as the franc is not susceptible to attacks from abroad, as the pound was in 1931.

To sum up, if the average Frenchman, or Belgian, or Italian, or other member of the gold bloc were asked why he wished to remain on gold, he would reply that it was the only honest course of action; that there was nothing to compel the suspension of the gold standard; and that suspension would involve further serious readjustments and might even provoke general disorder. It would certainly drive the present French Government from office, and probably other Governments as well. He would admit that his country was faced with the prospect of several years of lean trade and low prices, and would even concede that further trade restrictions in the form of higher tariffs and more rigorous import quotas might be needed as a defence against the non-gold countries. He would, however, consider that this was a price worth paying, and he even goes so far as to say that the maintenance of the gold standard by these countries will help to accelerate the necessary processes of world-wide readjustment, and so to bring nearer the day of general recovery.

The other question is, how long is the gold bloc likely to last? Can its objective be achieved, or will external forces prove too much for it? It must be admitted without further delay that the Agreement of July 8th is very loose in texture, and that there has been a tendency in England and the United States to attach far too precise and definite a meaning to it. It consists of nothing more than a general and even vague undertaking between the signatories to support each other, and no actual machinery has been devised. Even the association of the Bank for International Settlements with the Agreement means little. The Bank owes an identical duty to all its shareholders, whether they come from gold or non-gold countries, and the most it can have done is to promise its assistance in an advisory capacity—a service which it is equally prepared to render to non-gold countries.

One danger to the gold bloc possibly comes from Germany. German finances are now largely in the hands of Dr. Schacht, the President of the Reichsbank, and no one can deny that that in itself is a guarantee that they will be wisely administered. No one, too, realizes better than Dr. Schacht the incalculable dangers of inflation, and so the world may rest assured that if it is humanly possible the nominal gold value of the reichsmark will be maintained. Yet Germany is to-day under the pressing necessity of improving her balance of payments, and indeed, she would claim that the recent transfer moratorium on her external obligations represented an inability and not an unwillingness or refusal to pay. "Buy more of our goods," she has in effect said, "and we can pay more of what we owe."

On the other hand, while Germany is determined to maintain the gold standard in name, in practice she is beginning to develop methods of conducting her export trade upon roughly the sterling standard. The procedure is that under certain conditions she is prepared to authorize potential foreign buyers of her goods to acquire "registered marks." These marks come from various blocked accounts (consisting of money due to foreign creditors, the payment of which is temporarily prohibited), and as such marks are now obtainable at a discount of about 30 per cent. below gold parity, the result is that once the necessary authority is given, the importer can finance his purchase at a cost 30 per cent. below what it normally would have been. So far, authority has been granted very sparingly, and the German exporter has had to provide evidence that without this concession the business would fail to materialize. Continental opinion, however, looks to an extension of this practice, and indeed goes so far as as to say that Germany is following Austria's example, and is "creeping" unnoticed off the gold standard. Support is lent to this view by the suggestion that the "scrip" marks, which are being given under the transfer moratorium of July 1st and 8th to Germany's foreign creditors in settlement of half their claims, are to be similarly made transferable to potential buyers of German goods at a discount not of 30 but of 50 per cent.

The German defence to this charge of creeping off the gold standard has already been given. Every sale of registered marks or scrip marks to a buyer of German goods means the discharge of a little more of Germany's foreign indebtedness, and so Germany is simply putting into prac-

Topical Extracts:

tice the simple fact that she can only pay her debts by selling her goods. If, however, this practice becomes general, German industrial competition will become a serious matter both to the sterling countries and more particularly to the gold countries. It will in fact be a far more serious matter than American competition, fostered by the depreciation of the dollar, is likely to become, for while American trade is complementary to that of England and France, German trade is more directly competitive. The gold bloc may be able to resist this fresh competition by means of further trade restrictions, though these in themselves would be retrograde and undesirable. Even so, absolute confidence is not felt that the gold bloc would be able to hold out indefinitely against a Germany who for the purposes of her export trade had transferred herself from gold to sterling.

On the other hand, it is in many ways definitely in England's interest that the gold bloc should remain in being. At the moment there is some evidence that sterling is undervalued *vis-à-vis* the gold currencies, with the result that British producers enjoy an advantage over their French and Belgian competitors. The break up of the gold bloc and the depreciation of the gold currencies would destroy that advantage, and would probably mean that sterling became over-valued. Again, the break up of the gold bloc would at once be followed by a renewed outburst of gold hoarding, which might create acute monetary and banking difficulties, which to a limited extent might spread to London. In any case the disappearance of the gold bloc would be a serious blow to confidence and so would defer indefinitely the fall in international long term interest rates, the resumption of international trade and lending, and the absorption of those huge idle balances whose vagaries are to-day so potent a cause of exchange fluctuations and general unsettlement and uncertainty.

No doubt these considerations are present in the minds of the British authorities, who doubtless realize that any operations undertaken to check undesirable fluctuations of sterling against the French franc may also affect the Paris exchange quotations for belgas, guilders and Swiss francs. These considerations also explain why in so far as an informed opinion can be reached it would seem to be undesirable for there to be any further serious depreciation of sterling against the gold currencies, for it would add to the under-valuation of sterling and so to the difficulties of Continental producers, and so might constitute a fresh threat to the stability of the gold bloc. This need of supporting the gold bloc will probably gain in importance, if and when the German threat develops. The net result is that no definite assurance can be given that the gold bloc will remain in being until the affairs of the world have been straightened out, and until the road is clear for general exchange stabilization and a liberation and revival of world trade and finance, but that every effort will be made to maintain the gold bloc, and that to-day its members have many important factors in their favour. Our main duty in England to-day seems to be to recognize that it is in our interest to assist the gold blac and do all we can to preserve it.

NORMAN CRUMP

THE BOMBAY SHAREHOLDERS' ASSOCIATION MEMORANDUM

The Bombay Shareholders' Association has submitted a comprehensive memorandum to the Government of India setting forth its views on the Imperial Bank Act Amendment Bill which is before the Joint Select Committee.

At the outset, the Association observes that, having regard to the fact that with the establishment of the Reserve Bank the Imperial Bank will be converted into a commercial bank, it is not necessary to continue the Imperial Bank Act. Consequently it suggests that the Imperial Bank should register itself under the Indian Companies Act with its own memorandum and articles of association supplemented by an agreement between itself and the Reserve Bank which should provide among other things that as recommended by the Central Banking Committee (1) 75 per cent of the Members of the Local Boards and a majority of the Governors should be Indians and (2) recruitment of non-Indian staff should not be made except in special cases. It is also pointed out that irrespective of the recommendations of the Central Banking Committee further recruitment of non-Indians should be stopped in the interest of economy as it cannot be denied that the employment of non-Indians has largely contributed to the top-heavy administration of the Bank. Subject to these preliminary observations, the Association has examined the Bill in detail.

The memorandum is divided in two parts. The first part deals with the alterations in the existing Act sought to be made by the Bill while the second part deals with several further alterations which, in the opinion of the Association, should be incorporated in the Bill.

The Association, objects to the statutory appointment of a Deputy Managing Governor in place of one of the Managing Governors on the ground that such appointment is unnecessary considering that the responsible character of Government's business over which one of the Managing Governors has been mostly occupied is to be transferred to the Reserve Bank. The Association contends that the appointment of the Deputy Managing Governor is in any event a mattar for the Central Board to decide whose discretion should be left unfettered by the statute.

The Association strongly objects to the power of refusing transfers of fully paid shares sought to be given by Sec. 12 of the Bill. It complains that this section is a clear attempt to stifle legitimate criticism of the Bank's affairs at the hands of competent parties and points out that in its experience it has found that this power is being capriciously exercised by directors.

Referring to Sec. 27 of the Bill which lays down that the accounts of the Bank should be in the form prescribed by Sec. 132 of the Indian Companies Act which is popularly known as form 'F', the Association observes that in reply to its enquiry the Managing Governors intimated that certain modifications of form 'F' were necessary and that a suitably amended form would be provided for in the bye-laws. The Association submits that the form of the balance sheet should be incorporated in the Act itself and not left to be settled by the bye-laws and insists that if the Bank wants any modification in the form it should place all its cards on the table and give an opportunity ta the Association to have its say thereon. In this connection the Association has offered its co-operation in evolving an agreed form of the Bank's balance sheet. The Association proceeds to point out that the way in which book debts and investments are shown under the existing form is open to objection. Regarding book debts, the Association takes exception to the Government Notification issued some years ago which exempted banking companies from showing bad and doubtful debts separately in the balance sheet if provision therefor had been made to the satisfaction of the auditors. The Association contends that this notification is of a most retrograde character to that it has been instrumental in keeping shareholders ignorant about bad and doubtful debts, how they were contracted and whether they were the result of any carelessness or negligence on the part of directors. Regarding investments, the Association complains that in the absence of any fixed mode of valuation banking companies have resorted to diverse methods of valuation as it suits them. Investments are shown either at cost, market value, par or book value. Again a uniform mode of valuation is not followed from year to year with the result that investments valued on a particular basis in one year are valued on a different basis in the next year. In the opinion of the Association these variations in the mode of valuation have enabled banks to raise or reduce their profits and thus a misleading picture is presented to shareholders. Referring to the investments of the Imperial Bank, it is pointed out that the methods of valuation adopted by the Bank leave much to be desired. It is submitted that the accepted mode of valuation, namely, cost or market value whichever is lower, should be followed for the purposes of the balance sheet. The Association has made a number of suggestions in regard to better particulars to be given in the Bank's profit and loss account and has urged that a provision on the lines of Sec. 54 of the Canadian Bank Act should be inserted in the existing Act so as to enable shareholders to obtain from the Central Board further statements of the affairs of the Bank by a resolution in that behalf.

The Association suggests that the principal register of the Bank should be kept where the next annual meeting is to be held, that inspection of share registers should be allowed for at least four hours a day, that shareholders should be at liberty to take notes, that copies of branch registers should be filed with the Registrar of Companies at the Bank's respective head offices and that provisions in the Indian Companies Act in regard to registration of mortgages and charges should be made applicable to the Bank. Exception is taken to the power of the Central Board to make bye-laws regarding matters affecting the rights and interests of shareholders and it is urged that all these matters should be dealt with by the Act itself.

The Association insists that a provision should be laid down precluding the Bank from making loans to Gover-

Profit ...	8,00,480	Cash balance ...	1,46,786
Advances ...	6,93,109		
Total Rs. ...	94,08,637	Total Rs. ...	94,08,637

Extracts from Directors' Report:

The directors of the Kinnison Jute Mills Company submit the audited accounts for the half-year ended September 30, 1933, which, after allowing for interest, commissions, show a profit of Rs. 2,48,712. To this has to be added the balance of Rs. 5,51,777 brought forward from last half-year, making a total of Rs. 8,00,489. The directors propose to dispose of this as follows:—In paying a dividend on the preference shares at the rate of Rs. 7 per cent. per annum, free of income-tax, Rs. 52,500; in paying a dividend on the ordinary shares of Rs. 12-8 per share, free of income-tax, Rs. 1,87,500; in carrying forward, Rs. 5,60,489. The jute in stock has been taken at or under cost price and the manufactured goods at contract rates. In accordance with agreements entered into by all members of the Indian Jute Mills Association, the mills have worked forty hours per week during the period and 15 per cent. of the total looms have been shut down. The improved prices for finished goods prevailing during the early part of the half-year has enabled the company to show a profit. Unfortunately the improvement in prices has not been maintained and, in the meantime, the outlook for the future is not encouraging.

NAIHATI JUTE MILLS COMPANY

Extracts from Directors' Report:

The directors of the Naihati Jute Mills Company submit the audited accounts for the half-year ended September 30, 1933, which, after allowing for commissions, etc., show a profit of Rs. 1,24,161. To this has to be added the balance of Rs. 32,354 brought forward from last half-year, making a total of Rs. 1,56,515. The directors propose to dispose of this as follows:—In paying a dividend on the preference shares at the rate of 7 per cent. per annum, free of income-tax, Rs. 26,250; in paying a dividend on the ordinary shares of Rs. 10 per share, free of income-tax, Rs. 1,00,000; in carrying forward, Rs. 30,265. The improved prices for finished goods prevailing during the early part of the half-year has enabled the company to show a profit. Unfortunately the improvement in prices has not been maintained and, in the meantime, the outlook for the future is not encouraging. Results have been affected by a strike, the mills being closed down for nine days.

		Cash ...	7,51,326
Total ...	44,05,487	Total ...	44,05,487

Extracts from Directors' Report:

Report for the half-year ended 30th September, 1933 after writing off for Depreciation Rs. 50,000, shows a profit of Rs. 1,17,087-9-0; to this has to be added the balance brought forward from the last account, namely Rs. 4,408-14-9, giving a total sum for disposal of Rs. 1,21,496-7-9.

The Directors recommend that this should be dealt with as follows:—To paying a Dividend on the Preference Shares at Rs. 3-8 per Share (i.e., 7 per cent. per annum), free of income-Tax Rs. 35,000-0-0, to paying a Dividend on the Ordinary Shares at Rs. 5 per Share (i.e., 10 per cent. per annum), free of Income-tax Rs. 70,000-0-0, to carry forward Rs. 16,496-7-9, total Rs. 1,21,496-7-9.

In accordance with the existing Agreement amongst the Members of the Indian jute Mills Association the Company's Mills have worked 40 hours per week with 15 per cent. of the total looms sealed. This Agreement will remain in force until 30th June, next year.

During the first half of the period under review the markets were stimulated by the general improvement in commodity prices in the United States of America, and a decidedly better demand for manufactured goods was experienced at advancing rates, this being especially so in the case of Hessians. Since July, however, the position has gradualy become much quieter and the abnormally high stocks of Sacking goods have had a depressing effect on values, whilst at the time of writing the unsettled state of affairs, particularity in America, is creating a lack of confidence in the immediate future.—Kettlewell Bullen & Co., Ld., Managing Agents.

Extracts from Directors' Report:

Report for the half-year ended 31st October, 1933

The Rents realised and accrued during the six months under review amount to Rs. 79,931-0-6 and the Divisible Balance at credit of Profit and Loss Account, including Rs. 1,692-14-6 brought forward from last half-year, is Rs. 25,763-3-3 and after transferring Rs. 5,000 from equalization of Dividend Fund the Directors recommend the balance available at the credit of Profit and Loss Account of Rs. 30,763-3-9 be appropriated as follows:—Dividend Account 4 per cent. per annum Rs. 27,000, Repairs and Building Fund Rs. 2,000, carry forward Rs. 1,763-3-9, total Rs. 30,763-3-9.

One of the Directors, Babu Gobind Lall Bangur, has not signed the Report owing to his ill health.—Ram Chandra Sett, Atal Behary Ghosh, Gocool Chunder Law, Kartick Churn Mullick, Jotendra Nauth Roy, Directors.

BENGAL DOOARS RAILWAY CO., LD.

Extracts from Directors' Report:

After declining for two successive years, a small improvement in earnings is reported for the year ended 31st March. Gross earnings rose by Rs. 47,703, compared with 1931-32 to Rs. 19,48,087, and working expenses rose by Rs. 37,121 to Rs. 11,22,294, the net earnings, therefore, at Rs. 8,25,793, being Rs. 10,582 higher. Converted into sterling, less Indian taxation, net earnings amount to £54,609 (against £48,189), excluding interest receipts of £1,902 (against £1,660). After reserving £3,000 (against £2,000) for Income-Tax, and providing for the Preference dividend the Directors have placed £11,000, including the £5,000 transferred as per the interim report, to reserve (against £10,000, for 1931-32), bringing that fund up to £335,090. They now propose to pay a final dividend of 4 per cent. on the Ordinary stock, making 7 per cent. for the year (unchanged), leaving the balance forward a few hundred pounds higher at £53,706.

Extracts from Directors Report:—

Report for the year ending 30th June, 1933.

The Company's net profits for the year ending 30th June, 1933 after deducting all working expenditure, and setting aside Rs. 6 lacs as Depreciation on the Company's properties and allowing usual percentage on Dam Amortization Fund, amount to Rs. 34,02,232-14-11, which, with the sum brought forward from last year's Accounts, namely, Rs. 1,63,006-12-2, makes a total of Rs. 35,65,239-11-1.

From this sum of Rs. 35,65,239-11-1 the Directors have made the following appropriations:—Paid ad-interim Dividend on Preference Shares at 7 per cent. per annum, and on Ordinary Shares at Rs. 3 per share free of Income-tax, for the half-year ended 31st December, 1932, Rs. 8,52,450, written off annual proportion of Brokerage and expenditure on the Debenture loan Rs. 43,077-5-4, written off net loss on Investments Rs. 1,11,317-9-6, written off Stores (for obsolescence and deterioration) Rs. 88,790,15-11, written off Tools (for deterioration) Rs. 8,108-1-3, set aside as Reserve for Bad and Doubtful Debts Rs. 2,00,000, set aside as Reserve for Special Repairs Rs. 1,57,270, set aside as Reserve for Income-tax and Super-tax Rs. 5,65,000, total Rs. 20,26,014, leaving available for distribution Rs. 15,39,225-11-1.

Out of this sum the Directors recommend the following distributions:—A Dividend on Preference Shares at 7 per cent. per annum for the half-year ending 30th June, 1933 (subject to deduction of Income-tax), Rs. 3,12,480, a final Dividend on Ordinary Shares at the rate of Rs. 4-8 per share, free of Income-tax, Rs. 8,09,955, Bonus to the Company's permanent staff, Rs. 39,000, total Rs. 11,61,435. After making these payments there will remain a balance of Rs. 3,77,790-11-1, which the Directors recommend be carried forward.

General.—The Profit and Loss Account shows that the result of the year's operations, compared with that of the preceding year, was as follows:—

	1932-33. Rs.	A.	P.	1931-32. Rs.	A.	P.
Revenue from Power Sales	48,81,114	1	6	48,06,217	2	4
Revenue from other sources	6,73,950	2	3	5,76,445	2	6
Total Gross Revenue ...	55,55,064	3	9	53,82,662	4	10
All charges including Debenture Interest and Rs. 6,27,448 for Depreciation	21,52,831	4	10	21,20,460	10	8
Net Profit ...	34,02,232	14	11	32,62,201	10	2

A cash discount for prompt payment allowed from 1st February, 1933, to textile consumers on standard contract amounted by the end of the financial year to Rs. 1,24,832-14-2 and this item is included in deductions from gross revenue for the year under report. Nevertheless, the total of all such deductions is only about Rs. 32,000 in excess of that for the preceding year.

During the year the Directors, with the co-operation of the Board of The Tata Power Company, Limited, have put through a scheme of modification in respect of the 8 per cent. Debentures originally issued in 1926 to the total nominal amount of Rs. 2,00,00,000, by which the interest rate has been reduced from 1st April, 1933, to 6 per cent. and the outstanding loan to Rs. 1,50,00,000; the provisions in respect of annual redemption by drawing have been eliminated and the loan remains repayable at one time on 1st April, 1941. A cash bonus of Rs. 6 per Debenture was paid on 1st April to the Debenture-holders, and the cost of such cash bonus is being borne by the two companies in the proportion of 1/3rd by your Company and 2/3rds by The Tata Power Company, Limited.

To effect this reduction in the outstanding loan, the Company cancelled its own 8 per cent. Debentures of the face value of Rs. 29,69,600 which it held in its investment account, while The Tata Power Company presented for cancellation additional Debentures of the face value of Rs. 7,82,400.

A new inter-Company agreement has been entered into under which The Tata Power Company will from 1st April, 1933, pay to this Company interest at the rate of 6 per cent. per annum on its presently outstanding loan of Rs. 1,00,00,000 together with an additional ½ per cent. on Rs. 50,00,000, which is ths Company's proportion of the loan. The debenture interest annually chargeable to this Company will therefore now stand at Rs. 2,75,000 until maturity in 1941.

Further, The Tata Power Company having proposed and the Trustees of this Company's Debenture Trust Deed as well as those of the "C" Debenture Trust Deed of The Tata Power Company having approved and recommended such proposal, this Company has, with the sanction and approval of the Debenture-holders of this Company, released from the security created by the said "C" Debenture Trust Deed of Tata Power the amount of £236,800 of the "B" Debenture-stock of Tata Power remaining unredeemed out of £250,000 of such stock originally pledged with and held by the Trustees of the "C" Debenture Trust Deed and of the Debenture Trust Deed of this Company.

The Directors have appropriated and set aside to Reserve for Income-Tax and Super-Tax an amount of Rs. 5,65,000 out of the profits of the year under report. They have also set aside an amount of Rs. 1,57,270 to Reserve for Special Repairs and a further amount of Rs. 2,00,000 to Reserve for Bad and Doubtful Debts and from the latter reserve an amount of Rs. 2,50,000 has been written off during the year against probable losses in connection with The Kundley Power Company's debenture redemption.

The Directors are recommending the payment of a bonus to the permanent staff and request the Company to appropriate for that purpose an amount of Rs. 39,000 from this Company to be apportioned at the discretion of the Managing Agents to the joint and individual staffs of the Hydro-Electric Companies in service at the end of the year under report.

Regarding the cementation of the dam structures, the work at Shirawta has been practically completed. The total drilling there done amounts to some 206,500 lineal feet and the total cement injected to 5,500 tons. The leakage through the dam, which before cementation amounted to some 22 cusecs at full lake level, has been reduced to less than 10 per cent. of that amount.

Cementation at Walwhan was started in October of the year under report, and it is hoped to bring the work there to a satisfactory conclusion during the current financial year.

A complete study made of the Company's system during the year demonstrated the advisability of replacing the switchgear originally installed at Khopoli and Parel prior to initiating operations in 1915, as such equipment was now incapable of meeting in a satisfactory manner the demands imposed upon it.

The current monsoon has been satisfactory and the storage reservoirs are now practically full.

The physical equipment has been maintained in good order durng the year.

A comparison of the sale of power and revenue from power sales for the last five years is given below. Incidentally it may be noted that the Company has, for the third consecutive year, sold electrical energy to its full assumed capacity.

	Power Sold. Units.	Revenue. Rs.
1928-29 ...	102,226,164	40,68,704
1929-30 ...	117,158,874	45,79,667
1930-31 ...	120,000,000	47,96,823
1931-32 ...	120,000,000	48,06,217
1932-33 ...	120,000,000	48,81,114

—N. B. Saklatvala, Chairman. Bombay.

WORLD OF INDIAN FINANCE

Calcutta, November 17.

Money conditions have not witnessed any large change during this week also. The Treasury Bills operations of the Government show a better result this week as compared with last week. Although the total tenders at the last auction were a trifle less than in the previous week, being Rs. 243½ lakhs against Rs. 255½ lakhs of the earlier week, sales at the tap rate during the last Treasury Bills week were Rs. 93 lakhs. When it is remembered that the total maturities in the week were Rs. 3½ crores, it is easy to understand why money continued easy. During the ensuing week a further Rs. 3 crores will be made available to the market, against which the Treasury will draw in Rs. 2 crores through the weekly sale. With the tap rate showing a steady decline from week to week along with the average rate of acceptances, there is little inducement for banks and other investors to hasten with their applications for intermediate Treasury Bills. They will naturally wait, although they lose interest in idle balances, till the rock bottom rates are reached, in the hope that the better yield, which they would then obtain, would make up for the loss of interest in the interval. If this interpretation of the psychology of the market is correct, we should not see any dazzling figures for intermediate Treasury Bills' sales for some time to come. The increase of the weekly offer from Rs. 1½ crores to Rs. 2 crores affords an indication of the intentions of the Government. Apparently they feel that the time has arrived when, instead of their spurring the market, they should go easy, lest at a later stage the market should begin to raise them up. The piling up of the Ways and Means advances with the Imperial Bank should, no doubt, be troubling them; and they apparently consider that it is cheaper borrowing from the market at 2 per cent.—possibly even 2½ per cent.—instead of continuing the ways and means advances on a costlier basis. It is well to remember that Ways and Means advances are meant to tide over temporary short falls in the revenue position, and to make them a standing feature would be straining the purpose for which they were devised. From this point of view, the step taken by the Government is easy to understand. Moreover, three months November Bills mature in February, when the Government's revenue position will be easy enough to enable them to meet the increasing obligations entailed by the raising of the weekly offer without any embarrassment.

The securities market has recorded a further fall during the current week. The opening quotation of 3½ per cent. Paper on November 10 was Rs. 83-5 and to-day it was Rs. 81-10, a drop of Re. 1-11. The drop in the corresponding sterling security was even more marked. It was nearly £3 during the same period. As was suggested last week, the downward course initiated by profit-taking was maintained by the disquieting reports of the weakness in the sterling securities. The new sterling loan which was so favourably received and which resulted in a partial allotment of, say, roughly 53 per cent., has gone down by £1¾ in sympathy with other sterling giltedge. The steady rise of a few weeks ago is being counterbalanced by the steady decline now.

The London market is as sensitive to political and financial events as the Indian markets; and the present weakness in sterling securities must be attributed to a want of confidence in giltedge.

The strength in Indian sterling securities during the past few weeks may have been due to some extent to investments made from remittances caused by fears of change in the ratio. The recent reports regarding the Joint Select Committee's attitude on the Ratio question and the Government's assurances to the market, that, whatever happens, there will be no change in the existing arrangements, must have had some effect. If the "ratio remittances" were invested, they should now begin to be repatriated. The fall in the Indian sterling securities, on the basis of the above assumption, may, to some extent, be attributed to this cause. It is, however, unsafe to hazard an explanation of this kind, though the closing prices of 3½ per cent. Rupee paper would seem to lend some support to this view. Paper is reported to have gone up to Rs. 82 at the time of writing; and the market which opened weak is said to be firmer with a distinct tendency to "buy" rather than "sell". This change in the tone is, however, no matter for congratulation; and it would be rash to say that "bearishness" has disappeared. There is a general cloud of uncertainty.

It is distressing to think that the ratio has again become the source of vexatious uncertainty to the Indian business world. Last week it was a question of the exchange market pondering hesitantly over the probable fate of 18d. Now it is the question whether moneys that had gone abroad in anticipation of a reduction of the ratio had sought investment in the sterling securities and, if so, whether such monies will not seek their way back to this country and give a stimulus to the giltedge market. One looks in vain for the day when India will be free from the vexations of this ratio. The Government have themselves to thank for this uncertainty, if they show such unreasonable obduracy in maintaining a ratio of such proved disservice to the economic interests of the country. It would appear that the Government are heartened by the vote of the majority of the Joint Select Committee on the Reserve Bank Bill in favour of the higher ratio. "Eavesdropper" has a depressing tale to unfold of how the fetters of a high exchange have come to be clapped on India by Indians themselves. This has given a fresh lease of life to the ratio; and so far as the day to day working of the markets is concerned, it is well that the uncertainty of the ratio has been removed. But who can doubt that when the Reserve Bank takes charge of the currency and exchange of the country, it will find this skeleton in the cupboard all the time and every time? The votes of a few legislators, never noted either for their capacity or willingness to take a view independent of the Government, or for their knowledge of economic questions cannot make this untenable ratio tenable. It may free the Government from its immediate embarrassments. But it must face the music again, and before long.

Exchange, which revived on the news of the deliberations of the Joint Select Committee in Delhi, has again sagged down to 1s. 5 7/8d. with practically no life in the market. The usual feature of the Exchange market is for Bombay to pull down and for Calcutta to pull up. During the current week, there is an agreed lull at both the ends. The downward course of the dollar and the uncertainty, that veils the operations of the American financial authorities, have suspended the flow of gold at the present time; and without exports of gold, there is little to support the rupee rate. There are no indications at present to warrant an appreciable rise in the rate. The Government have done wise in maintaining their weekly offer, despite barren results, for at a time like this any move on the part of Government is likely to be misinterpreted.

The closing rates are: 1s. 5 7/8d., November-January-February T.T.; 1s. 5 13/16d., February-March T.T. and possibly April; and 1s. 5 25/32d., May Monsoon months T.T.

Three months sight Bills may be quoted: 1s. 5 31/32d., and possibly at lower rates still.

Money was easy during the week. Call money quoted 3/4 per cent. Onemonth and twomonth deposits quoted 1 1/4 per cent. and threemonths 1 1/2 per cent.

Statement showing the Cash Balances at the Home Treasury at the beginning of each month from April, 1930.

FINANCE ABROAD

	Sterling Dollar rate	Sterling Franc rate	London Price of gold
November 9	5.07¼	81.15	130s. 11d.
,, 10	5.13	81.50	129s. 8d.
,, 11	5.02½	81.43	130s. 1½d.
,, 13	5.15¼	81.84	129s. 1½d.
,, 14	5.30	82.09	128s. 7d.
,, 15	5.40¾	82.53	129s. 0½d.

The table above shows a significant change in the position and movements of the international exchange markets from what we have been accustomed to regard as usual in the past few months. It has been pointed out, time and again, in these columns that movements of the sterling-dollar and the sterling-franc rate were inter-related, every fall in the dollar being reflected in a corresponding strength of the franc, so that, when sterling appreciated against the dollar, it at the same time depreciated as against the franc. During this week, however, this tendency has ceased to manifest itself. While the sterling-dollar rate has gone up steadily from 5.07¼ to 5.40¾ sterling has also appreciated as against the franc, the rate going up from 81.15 to 82.53. The sterling price of gold has shown a corresponding fall from 130s. 11d. to 129s. 0½d. This only means that while, on the one hand, the monetary policy of Mr. Roosevelt is effecting a decline in the exchange value of the dollar there are, on the other hand, forces tending to strengthen sterling in relation to the other currencies. It is thought in certain quarters that Great Britain has clarified her exchange policy in the light of the expressed intentions of President Roosevelt to depress the dollar still further through a policy of purchasing gold both at home and abroad at steadily increasing dollar prices. It is also suggested that Great Britain has made up her mind that, in the event of the dollar going to still further depths, Britain would not allow sterling to follow the dollar, and that, even in the face of a soaring cross-rate, sterling would maintain a more or less stable link with the franc and the gold currencies. From this it is but a short step to the assumption that Great Britain is on the look-out for the opportunity for an early return to the gold standard and that she hopes to force the hands of America and other off-gold countries in regard to the question of stabilisation of currencies and exchanges.

There is, doubtless, much fancy at play in forecasts and prognostications of this kind. It is difficult to believe that it is not yet too early for Great Britain to have any rigid notions of the policy she would pursue in the event of the dollar going down to still lower depths. At any rate, the strength of sterling as against the franc during the week under review is far from being a confirmation of the suggestions and reports current in certain quarters. The strength of sterling as against the dollar hardly needs any explanation. But as against the franc, there can be no doubt that the fears that are widely, and reasonably, too, entertained about the stability of the French budget and its repercussions on the franc form a significant bull point for sterling. It is reported that American money is pouring into London as a result of the weakness that is already noticeable in the franc and as a result of the distrust felt in the French financial position. During the last fortnight American money has been devoted to the purchase of gold in London and leading British industrial shares have enjoyed a brisk demand on American account. As this development is attributable to the policy now pursued at Washington and as the present policy is bound to continue for some time, it might be said that the flow of American money into British industrial shares will continue to impart strength to sterling in the coming months.

The flight from the franc is undoubtedly due to the fears that the failure of politicians to balance the budget might ultimately result in the abandonment of the gold standard. It is reported that the Bank of France gold reserves shrank by over a milliard francs within October 20 and November 3. This flight of gold is bound to continue, till the French Government and Parliament are in a position to claim that the budget has been balanced. Apart from the sentiment, it is certain that the position of the French budget has no close relation to the future of the franc. For the possible deficit of the French Government is but an infinitesimal fraction of the total gold resources of the country ; and after all there is no reason to suppose that France will not throw up the right man at the right moment to accomplish the task of balancing the budget.

It is interesting to view sterling as the fortunate beneficiary of the troubles of the dollar and the franc. And as on more than one occasion since the abandonment of the gold staudard in September, 1931, London has been the attraction of refugee moneys. This has tickled the self-esteem of British statesmen ; and we find Mr. Walter Runciman, President of the Board of Trade, claiming with pardonable pride that Britain has emerged from the world cataclysm more prosperous and better fitted than any other country. He refers to the increase of 684,000 persons in the total employment in the country during the last twelve months. But as Mr. Runciman has been careful to point out "We are certainly not through all our troubles; and there are elements of uncertainty on both sides of the Atlantic which must have a direct effect on our prosperity." The great riddles set by Mr. Roosevelt both in the monetary and in the economic sphere continue to vex British statesmanship. But Mr. Runciman strikes an uncommon note, when he expresses the hope that Mr. Roosevelt will succeed in his great experiment, for the not unselfish reason that, if the American experiments fail, "we on this side of the Atlantic would receive a great deal of the backwash." That the recovery programme of Mr. Roosevelt has set a great problem for all the Governments of the world cannot be doubted. On the one hand, they have to prepare for the pursuit of similar policies, should the developments in America be such as to inspire the faith of the masses in foreign countries in the efficacy of similar measures for their own problems. On the other, they have to be equally well prepared for meeting the situation that might arise as a result of any spectacular failure of the Roosevelt programme.

For the present, however, British statesmen are probably more busy thinking out their monetary and exchange policy in the face of the drastic depression in the dollar than in taking the long view of economic trends and policies. From the reports that were received during the week from abroad, it would seem that rumours are current in London that the Exchange Equalisation Fund would carry out operations to overcome the embarrassments caused by the rapid deterioration of the external value of the dollar. What the objective of the policy exactly is, we have no means of knowing at present. The Chancellor of the Exchequer, it would appear from a special cable appearing in the *Statesman* of November 11, has made a statement that the pound is to be kept independent of the currency of any other country and that the statement has given satisfaction in the City. If this statement means anything, it means that the authorities would have no undue obsessions in favour of preserving the stability of the sterling-franc rate, and this might be deemed to be suggestive of a readiness on the part of the authorities to allow sterling to follow the dollar, should the events prove it to be desirable.

COMMUNIQUES AND RETURNS

TREASURY BILLS

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, November 14. The total amount offered was Rs. 2,43,25,000. Tenders at Rs. 99-8-9 and above were accepted in full and those at Rs. 99-8-6 were allotted approximately 64 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Re. 1-13-6 per annum.

Tenders for Rs. 2 crores of three months Treasury Bills will be received on Tuesday, November 21. Successful tenderers should make payment on Friday, November 24. Other conditions are as usual.

Three months intermediates will sold from November 15 to 20 at Rs. 99-9 per cent. subject to the conditions previously announced.

Three months intermediates sold from November 8 to 13 amounted to Rs. 93,00,000.

STERLING TENDERS

The Controller of the Currency notifies that there were no tenders for sterling on Wednesday, November 15.

On Wednesday, November 22, £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE.

The balance of the Gold Standard Reserve on the 31st October, 1933, amounted to £40,000,000 and was held in the following form:—

	£
Cash at short notice at the Bank of England	2,036
British Treasury Bills	14,696,626
Other British and Dominion Government Securities	14,278,004
Gold.—In England	2,152,334
In India	8,871,000
Total ...	40,000,000

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Thursday November, 16.

Coals were a steady feature during this week with a more or less heavy selling pressure. The undertone, however, continues to be firm. Jute shares were firm and Teas steady. Government securities were quiet 3½ per cent. Paper fluctuated between Rs. 82-9 to Rs. 82-4, 4 per cent. 1960-70 Loan changed hands at Rs. 98-6,5 per cent. 1939-44 at Rs. 105-10. Some business was also done in 5 per cent. 1945-55 at Rs. 113-15; 4½ per cent. 1934 bonds quoted Rs. 101-12, 5 per cent. 1940-43 Rs. 105-12, 3½ per cent. New Loan Rs. 93-1, 5½ per cent. 1938-40 Rs. 107-8 and the 4 per cent. Punjab Bonds Rs. 99-4.

Jute.—This section continued to be steady during this week also Howrahs quoting Rs. 47-15, Kamarhattys Rs. 474, Anglo-Indians were dealt in at Rs. 324, Belevederes improved to Rs. 310, Gourepores came to business at Rs. 356, and Unions at Rs. 382. Cheviots quoted Rs. 302, Empire Rs. 32-8, Nationals Rs. 21-4, Nuddea Rs. 17-12, Reliance Rs. 70-8, New Centrals Rs. 335, Orients Rs. 197, Albions Rs. 226, Barnagore Rs. 120, Dalhousie Rs. 340, Deltas Rs. 320, Budge-Budge Rs. 293, Bally Rs. 123 and Presidency Rs. 5-2.

Coal.—Coal shares were fairly active with a rising tendency in prices. Bengals quoted Rs. 248, Burrakurs Rs. 14-15, Equitables had a fair turnover at Rs. 22, East India Rs. 18-8, New Beerbhoom Rs. 13-8, Burra Dhemo Rs. 5-4, Standards Rs. 30, Jainty Central As. 12, Rewas Rs. 12-12, Ghusick and Muslia Rs. 3-10, Deoli Rs. 8-4, North Damuda Rs. 3-11, Pench Valley Rs. 34-8, South Karanpura Rs. 6 Talcher Rs. 2 and West Jamuria Rs. 8-6.

Tea.—This section was steady and sellers predominated but prices, on the whole, were well maintained. Dimakusi fell back to Rs. 26-12, New Dooars were dealt in Rs. 890, New Terai Rs. 12, Bishnauths were dealt in at Rs. 26, Betjan came to business at Rs. 225-12, Bormajan Rs. 2-14, Bateli quoted Rs. 6-6, Hasimara Rs. 39, Rydak Rs. 49-4, Tirrihannah Rs. 7-14, Ledo Rs. 199, Hattikhira Rs. 22-12, Huldibari Rs. 25-12, Naga Hills Rs. 16-8 and Loobah Rs. 7.

Cotton.—This section reamined unaffected. Kesorams quoted Rs. 3¾, Dunbars Rs. 113, Elgin Mills Rs. 54, Bengal Luxmi Rs. 70, Muir Mills Rs. 250 and Benares Cotton and Silk Rs. 1 5/16.

Banks and Railways.—In Bank shares, Imperials fully paids and contributories showed a rise from Rs. 1,220-8 and Rs. 306 last week to Rs. 1,240 and Rs. 310 respectively. Centrals were unchanged at Rs. 24, Eastern Bank at Rs. 65. In Railway shares Futwah Islampur quoted Rs. 74-8, Mymensingh-Bhairab Bazar (Rebate) Rs. 85, Bankura Damodar Rs. 75, Darjeeling-Himalayan were unchanged at Rs. 71, Baraset-Basirhat at Rs. 56, and Howrah-Amtas at Rs. 90.

Miscellaneous.—This section was featureless. Bengal Iron came to business at Rs. 3, Burma Corporation had some enquiry at Rs. 8-14, B. I. Corporation As. 11, Spence's Hotel Re. 1-10, Kumardhubi Engineering Rs. 2, Bengal Telephone Rs. 17 ex-dividend, Muttra Electric Rs. 7, United Provinces Electric Rs. 129, Upper Ganges Rs. 7-4, Indian Iron and Steel Rs. 4-3, Indian Galvanising Rs. 8-4, Calcutta Tramways Rs. 17, Indian Wood Products Rs. 29-12, Walford Transport As. 15, Midnapore Zemindary Rs. 59-8, Indian Paper Pulp Rs. 112, Reliance Firebricks Rs. 7-4, Punjab Portland.Rs. 14-6, Bengal Timber Trading Rs. 140, Assam Match Rs. 14-14, while in sugar shares New Savan were marked up to Rs. 12-8, Samastipurs changed hands at Rs. 13-8, and Carew & Co., accounted for a few transactions at Rs. 14.

MADRAS STOCK EXCHANGE

(*By Wire.*)

(From Our Correspondent)

Madras, November 16.

The securities market was erratic and easier, the highest touched by paper being Rs. 83-14 and the lowest Rs. 81-13. At the time of writing violent fluctuations in foreign exchange hardening up of Treasury rates both in England and in India and the lack of investment enquiry tended to lower down rupee securities. Despite these difficulties a fair volume of business was done and good enquiry continued for Mysore Loans of all descriptions with buyers remaining unsatisfied. Joint Stock Company Debentures and Preference shares were a dull market and only a few transactions were recorded. Vellore Electric debentures noted deals at 102 per cent. and Spencers A Preference at par, a slight improvement being visible in Tata second preference with business done at Rs. 101.

The tendency of bank shares was to be from steady to firm. Imperials firmed up to Rs. 1,230 and Rs. 312-8 for fully paids and Contributories, Indian Banks were done at Rs. 92-8 for the big with sellers uninterested to sell below Rs. 93, Mysore Banks and Centrals were steady at old rates. Stray business passed in Travancore National Banks at par, the State Aided Banks were the only weak feature closing easier at Rs. 17½. Electric shares were steady, a line of Vellore electries changed hands at Rs. 9¾ with buyers over. Mills had a better enquiry due to advices form both the local and foreign markets. Buckinghams were snatched up to Rs. 184 while a large parcel of Madura Mills changed hads at Rs. 31½, Kaleeswarars were done at Rs. 292½, Bangalores, however, weakened to Rs. 80. Cements noted no business.

The activities of the newly formed currency league had effect on Exchange and rates declined to as low as 1s. 5 27/32d. T. T. for ready delivery in sugars, Deccans were done at Rs. 262½ for the big and Rs. 63 for the smalls with buyers uninterested. Mysore Sugars were done at Rs. 9-14 closing weaker with sellers predominating. East India Distilleries and Sugar Factories ordinary after being done at 25s. have firmed up. In the Miscellaneous section; there was nothing to report.

MADRAS MONEY MARKET

The activities of the newly formed Currency League had its effect on exchange and rates declined to as low as 1s. 5 27/32d. T.T. for ready delivery with only nominal quotations for forward positions. On Tuesday, however, the news that the Reserve Bank Elect Committee had agreed by a small majority that the ratio should not at present be interfered with had a steadying effect; and banks were good sellers at 1s. 5 15/16d.

Owing to an almost complete lack of exports in all markets, exchange has again weakened; and at the close the general selling rate here is 1s. 5½d. with possibly 1s. 5 29/32d. just available. Forward selling rates are 1. 5 27/32d. January-March. Banks are buyers of a months sight bills at 1s. 6 1/16d. and the market closes with an uncertain undertone.

Call money is easy with lenders over at 1%

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From our Correspondent.)

Bambay, November 16.

Giltedged ruled steady. Government papers for 3½ per cent. which had previously closed at 83-4 developed a weaknes owing to lower London advices and to newly floated India sterlin gloan being quoted at discount. The closing rate therefore was 81-12, which is the lowest for the period.

Business in forward was resumed on Saturday after a month and a half. There was a precipitous decline on reopening; but fair recovery was made that day. On Monday some firmness was witnessed on hopes about change in rupee exchange ratio. But they received a quietus on Tuesday whereupon selling was renewed. False rumours about Central India Mills lowered its rate to 215 affecting other scrips. The last two days also presented a general sagging tendency. Bank shares were unaffected, imperial Bank old issues being in demand at 1250. Central India shares soon recovered and closed at 230 to-day. Currimbhoy group shares are now being dealt for cash only, Fazalbhoys and Pearls being quoted at only 52-8 and Rs. 10 respectively. Indore Malwas stand at 68-12. The lowest touched on reopening and the closing rates to-day of some scrips are given below.

	Lowest rate	Closing rate
Bombay Dyeing ...	740 0 0	757 8 0

JUTE AND JUTE GOODS

JUTE

During the week under review the jute market has ruled quiet but steady, the amount of business passing being rather small.

During the earlier part of the week the market ruled steadier on the assumption that the Government of India are now will impressed with the necessity of lowering the value of the rupee and that in all probability the ratio will be fixed at 1s. 4d. instead of 1s. 6d. at which it stands to-day. But, later on the discussions in the Reserve Bank Committee which took place in Delhi clarified the position when it was noted that the ratio will remain where it is to-day. This had a weakening effect on the market and price for December futures fell from Rs. 25-10 to Rs. 25. But the intrinsic position of jute is against a further fall. Arrivals in the Moffussil are showing a falling off and sellers are unwilling to discount values further. Consequently there was a small recovery noticeable towards the close of the week.

Statistically the position of jute does not warrant any immediate and notable rise, unless it be a part of the general trade revival. The position in view of the very low prices does not show any reason for any appreciable fall as well. About 40 lakhs of bales have already arrived, out of which little over 25 lakhs have been taken up by the mills in Indian and little below 15 lakhs having been taken by the spinners abroad. The last year's carry over is in the hands of the balers and holders in Calcutta, the stocks being about 6 lakhs bales in Calcutta, a figure slightly over the stock estimate of last year.

Business in November ready firsts was done at Rs. 23-12 and Rs. 24 with small sellers at the latter rate. There are sellers of district jute at Rs. 8-8 and Rs. 4 buyers offering annas two less. Business in supervised European Jat for January-March positions has been reported done at Rs. 8-12 and Rs. 4-4.

JUTE MANUFACTURES

During the current week the market has ruled very irregular, the fluctuations following the fall of dollar and buying and selling movement by a couple of prominent speculators. Early in the week the hessians market was steady, slowly declining during the middle of the week, and again being firm towards the close due to heavy fall in dollar and purchases in ready goods by a speculator.

Sterling dollar cross rate which stood at 4.94 on Thursday last stands to-day 5.40 or a nett rise of 46 points has taken place during the week. The fall in dollar has naturally led to higher prices in U.S.A. and to a belief that exports from that country will receive a stimulus. This has led to buying of ready hessians by a bull operator. But the trading circles are still very much doubtful if this course of depreciating dollar will have any real, substantial and lasting effect on the exports of U.S.A. in general and the values of hessians in particular.

Mills have sold decent quantities during the previous weeks and are always in a mood to negotiate business with export houses. During the rise which took place in the spring last year, Calcutta prices for hessians having soared up by something like 50 per cent. in the course of four to six weeks a very large business in hessians was done by American buyers from Dundee and the Continent. This was done partly at the cost of Indian Mills. Consequently they are not prepared to let similar happenings repeat. However it must not be forgotten that after a great difficulty the mills have been in a position now to keep up a healthy market and they would not follow the policy of overselling at rise. They are keen to keep the stocks low and maintain a healthy tone of the market.

The position of the heavy goods market is not so strong as that of hessians. But the former will always rule firm in sympathy with the latter. However buyers in heavy goods too are not wanting at declines.

Total reported sales for the week ending Saturday, the 11th November, 1933.

COTTON AND COTTON GOODS

COTTON.

By Wire

(From Our Correspondant)

Bombay, November 16.

Ignoring the fundamentals of cotton has the American Administration fixed their attention on the amazing depreciation of dollar, it being quoted to-day at about 5.49 in terms of sterling. A corresponding rise in commodity prices has not materialised. Hence the utility of this devaluation of dollar may well be questioned. Apprehending a general economic crisis, the local market to-day developed a sagging tendency, Broach April-May touching 181-8, closed at 182 and Bengal December-January at 137-8-0.

The cotton market has ruled extremely narrow and featureless. The rise in New York froxm 9.77 to 10.12 had no effect on the local market due to the depreciation of dollar by 50 cents. in the course of one week. The highest and lowest quotation for Broach April-May were Rs. 186-8 and Rs. 184-8 respectively. The strength in the American markets both securities and commodities, has been due to the fall in dollar. The bull factor for U. S. A. is not so encouraging for Indian markets. Because, since Mr. Roosevelts announcement of purchasing gold in foreign centres, the decline in Dollar was a foregone conclusion.

According to the American Bureau Report published on November 8 the estimated production is 13.10 million bales, or an increase of 215,000 bales over the previous month's report. The yield per acre is estimated at 208.7 lbs. per acre as against the final yield of 173.3 lbs. in 1932, 201.2 lbs. in 1931 and 147.7 in 1930. The high yield clearly indicates that there is practically no damage caused by the boll-weeirl and that a very intensive cultivation is carried on by farmers in U.S.A. consequently in spite of a decent reduction in acreage under cotton this year the nett production may be about 10 per cent. more than last year.

PIECEGOODS

Since reporting last the undertone of the piecegoods market in Calcutta has been comparatively steadier, although there are no new features to report, nor there has been any turnover in business worth mentioning.

The Indo-Japanese agreement has already come to almost a settlement, and it is expected that whether the Japanese Government accepts or not the offer made by the Government of India will be made known very soon. The impression of the market however is that the same will be accepted by Japan, and that a better buying movement will set in.

Fairly decent amount of new business has been done with Lancashire in whites, Dhothis, yarn, umbrella cloth and fancy styles. The sudden drop in the exchange on rumours of lowering the ratio has a temporary disturbing effect. But since the decision arrived at by the Reserve Bank select committee the exchange is again firm and normal business has once again been resumed.

NEW REDUCED
without profit RATES.

12, Mission Row, CALCUTTA.

The offtake during the week has been fair specially in the seasonal goods, and spot goods have met a ready demand while the rates are well maintained.

LARGER BRITISH IMPORTS

The latest statistics issued in regard to importations of cotton piecegoods and yarns into Calcutta from all producing centres, including those from Indian ports, during October show a slight expansion in trade to the extent of about 3,627 packages over the previous month's figure in spite of the further marked reduction which has occurred in imports from Japan. The total number of packages for the month named amounted to 29,654, which figure includes 12,138 packages from Indian ports. This compares with 26,029 packages for September and 52,937 packages for October last year. It will be seen from the following comparative figures, showing the respective importations from the three chief sources of supply since January, that the enhanced tariffs, which came into force on June 7, have considerably reduced Japan's quota, while Great Britain has not only materially improved her position but has actually exported more than Japan during October :—

	From Great Britain Pkgs.	From Japan Pkgs.	From Indian Ports Pkgs.
January ...	6,340	11,687	22,399
February ...	5,269	9,740	19,999

May ...	4,772	14,129	10,097
June ...	2,994	15,382	10,938
July ...	3,211	15,592	13,353
August ...	5,668	19,531	17,139
September ...	3,877	8,220	11,421
October ...	6,823	6,071	12,138

YARNS

Although there has been not much by way of fresh business in the yarn market the demand for ready goods has been very good and dealers have received better enquiries and orders from the consuming markets The weak sellers are out of the market and consequently there has been a bit steadier feeling in the values. Business has been done in Indian as well as foreign yarn.

GOLD

(By Wire)

(From our correspondent)

Bombay, November 16.

New York gold price was fixed at 33.56 dollars and London ready gold at 6-9-0½ yesterday. Owing to the depreciation not only in dollars but of francs also, local prices have gradually eased away on balance of fluctuations. December rate is being quoted at about 32-7-0 in the evening.

Gold.—During the current week the market has ruled quiet and values on balance are lower over the previous week. Bombay mint gold has gone down from Rs. 32-14 to Rs. 32-8 the fall being due to the appreciation of sterling in terms of Franc. The rise in sterling is due only to the depreciation of dollar from 4.90 to 5.40 per lb. In view of America's raising of gold purchase price to $33.56 in London the London market has remained steady at s129. Due to the fall in the gold the arrivals of distress gold in port towns has slackened. It is also partly due to the fact that after all gold cannot come out for sale indefinitely. A very large portion of distress gold has been sold by the poor and the flow someday or the other must cease. Export however continues, specially from the stocks in Bombay which are unusually heavy. The offtake for internal use remains unchanged at 2 to 3 thousand tolas a day.

LONDON (Air-Mail Week.)

Gold reserve against notes of the Bank of England was £190,447,029 on the 25th October, showing an increase of £69,730 as compared with the previous Wednesday's figure.

Fairly substantial amounts of gold were on offer in the open market. Price fluctuations were wide due to the erratic movements of the exchanges. Keenness of demand from the Continent continued and a high premium over the franc parity was maintained.

The following were the United Kingdom imports and exports of gold registered from midday on the 23rd ultimo to midday on the 30th ultimo :—

SILVER

(*By Wire*)

(From Our Correspondent)

Bombay, November 16.

Strong pressure is being put on President Roosevelt for monetising silver -composite dollar composed of 24 per cent. gold and 75 per cent. silver being proposed. Hence, local December rate advanced from 56-11 to 57-2-6. But again receded to 56-11 on general selling.

Silver.—The market during the current week has ruled featureless values remaining almost unchanged. Business is done in readies at Rs. 57 and the next settlement at Rs. 57-2. London market has also remained inactive fluctuations being confined to 18¾ and 18½d. per ounce. There has been very little fresh business, whatever that took place being in the form of carry over the week being the settlement week both in Bombay ; and Calcutta. Stocks in Bombay and Calcutta are estimated at 9,000 and 1,000 bars the daily offtake is very poor at about 20 bars, at both the places taken together. In Shanghai dollar the movement has been likewise very narrow quotations ranging in the nearhood of s.1.8½d. On the whole the market has remained featureless and is likely to remain so.

LONDON (Air Mail Week)

During the week price fluctuations were not wide and a steady tone prevailed. America bought consistently giving a firmish tendency to the market in the afternoons. China also bought and hence Continental offerings were easily absorbed. Indian Bazaars made re-sales and also gave support on occasions.

The undertone of the market is good and appears quite steady at the present level.

SUGAR

The market in Calcutta during the period under review has ruled quiet without any notable change in quotations. New season's working in the Indian mills is likely to start now. It is reported that some of the factories are experiencing difficulty in getting the case at the price they have fixed and that some of them are on the way of raising their buying limits.

Java sugar imports are steadily declining in India. But from the reports received it is understood that Java is engaging its attention on far eastern markets. She is at the moment only keen to clear off its surplus stocks. For fresh production she is already making provision to sell in the markets referred to above. This has been considered a bull point by some of the people in the trade, but so far as the Indias markets are concerned the price will be regulated by the internal supply of indigenous manufacture rather than by Java except in the Western Indian ports.

TEA

Sale No. 22 was held on 13th and 14th November, 1933 when 17,700 packages of tea with export rights, 8,900 packages of leaf and 6,500 packages of dust for home consumption were sold at annas 0-9-1, 0-4-2 and 0-4-11 per lbs. respectively.

The quality remained almost like that of the previous week. There was a strong and active demand for all grades, prices showing a rise of 3 pies. The sale was full of buoyancy and Persian and home buyers were all showing a keen interest. Demand for local consumption was good specially for good leafe and fannings. Dust were fully strong.

The official crop figure shows an increase of 3 million lbs. making a total decrease of 33¾ million lbs. as compared with last year.

The following are the full particulars of sale No. 22.

Teas with Export Rights

	1933.	1932.	1931.
Offered	18,527	28,400	28,100

INDIAN TEA SALES

At the London auctions on November 12, 25,500 packages of Indian tea were submitted for sale.

The market was active with a good general demand. Common sorts were firm while others were well maintained.

The following were the lowest prices fetched during the day's auction:—

Common Peokoe last auction 10½d., to-day's auction 11½d. lb.: Common Broken Pekoe last auction 10¾d. to-day's auction 11d. lb.; Common Orange Pekoe last auction 11¼d., to-day's auction 11¾d. lb. Common Broken Orange Pekoe last auction 11½, to-day's auction 11¾d. lb.; Common Broken Pekoe Souchong last auction 11d., to-day's auction 11¾d. lb.;

The following are the value prices:—

Clean Common Pekoe last auction 11¾d., to-day's auction 11¾d. lb.; Clean Common Broken Pekoe last auction 11¾d., to-day's auction 11¾d. lb.: Clean Common Orange Pekoe last auction 11¾d., to-day's auction 11¾d. lb.: Clean Common Broken Orange Pekoe last auction 11¾d., to-day's auction 11¾d. lb.; Clean Common Broken Pekoe Souchong 11¾d., to-day's auction 11¾d. lb.

IMPORTS OF TEA IN UNITED KINGDOM.

Imports of tea of all kinds into the United Kingdom, during the month of October, 1933, compared with the previous month and with October, 1932, were as follows:—

	Oct, 1932	Sept. 1933	Oct. 1933
From British East Indies (except Ceylon)	51,505	33,036	37,755
From Ceylon	10,989	9,469	10,095
From China (including Hong-kong and Macao) ...	300	1,334	971
From other countries ...	3,272	2,194	3,842

CEYLON TEA SALES

At the London auctions on Nov. 14th, 18,500 packages of Ceylon tea were submitted for sale.

The offerings met with a fair demand. Cheaper sorts sold at firm rates, while other descriptions were irregular. The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 11½d., to-day's auction 12d. per lb.; Common Broken Pekoe last auction 11¾d., to-day's auction 11¾d. per lb.: Common Orange Pekoe last auction 13½d., to-day's auction 13d. per lb.; Common Broken Orange Pekoe last auction 12¼d., to-day's auction 11¼d. per lb.

The following are the value prices:—

Clean Common Pekoe last auction 11¾d., to-day's auction 12d. per lb.; Clean Common Broken Pekoe last auction 12d., to-day's auction 12¼d. per lb.; Clean Common Orange Pekoe last auction 14d., to-day's auction 14d. per lb.; Clean Common Broken Orange Pekoe last auction 12⅝d., to-day's auction 12¾d. per lb.

GRAINS AND SEEDS

WHEAT

In spite of a weaker seeds market the wheat market has ruled fully steady during the current week, values all along being maintained for may Beta at about Rs. 3-2 per md. The healthy tone of the market is partly due to better buying inclination on the part of moffussil buyers. The new crop prospects so far are not very heavy. The crops in Australia and Canada being reported smaller a bullish sentiment has been created in the market. May Beta is fairly lower than the ready prices and this has been an inducement on the part of the holders to part with readies and stock forward. The markets overseas however have not shown similar strength and it would not be incorrect to say that they have been not only comparatively quieter but also in contrast with the Indian wheat market.

The provisional estimates of Canada's grain production in 1933 showed a tremendous decline. Wheat, which was over 428,000,000 bushels in 1932, is estimated at less than 272,000,000 bushels, while the estimates of oats have declined from 391,000,000 to 311,000,009 bushels.

Quotations:—

Calcutta	Rs. As. P.
Punjab Ready	3 5 6
Cawnpore Ready	3 5 6
May Beta	3 2 0
Liverpool	
Baruso Parcels	20s. 6d.
Rosafe Parcels	21s. 3d.
Australian South Parcels	23s.
Chicago (per Bushel)	
December	$0,91⅛
May	$0.95

LINSEED

Compartively easier conditions have prevailed in the linseed market during the course of the week. The highest Rs. 4-8 touched earlier in the month caused chiefly by damage reports in Argentina and shortage of ready stocks in Bombay could not be long maintained. U. S. A. grain markets showed signs of weakness while profit takers soon unloaded at rise. The movement of ready towards the ports was also brisker and the shortage thus soon decreased. Consequently there has been a persistent decline from the top the lowest being Rs. 4-3 per maund. The recent depreciation in dollar however is expected to bear a bullish effect on the seeds market. Otherwise there is nothing fresh worth record.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

THE HALF YEAR'S TRADE.

Our readers, we are sure, will welcome the revival of our Monthly Trade Supplement, which has unfortunately had to be suspended over a long period. The beginning after such a long break has been beset with difficulties of its own; and we regret that we have yet been unable to make the Supplement all that we would like it to be. The index number of stocks and shares, which we used to give along with our Monthly Trade Supplement, have had to be calculated for the period, in which the Supplement was suspended and we hope to give full statistical data in this regard along with the next issue of the Supplement. It should also be our aim to make the trade review cover the trade, industry and finance not only of India, but of the world as a whole; and arrangements are being made to secure the necessary facts and figures. In order that there might be no overlapping, the articles in the Overseas Section will endeavour to fill in the details of the picture, of which only the statistical outlines will be available in the Trade Supplement. By this diversification of purpose and method, we shall aim at giving our readers a complete understanding of the trend of world trade with the political and economic background depicted adequately in the articles in the weekly issues of *Indian Finance*. Lest this should seem too tall a promise to be fulfilled, we may permit ourselves to point out here that beside the Monthly Trade supplement we had been formerly giving a Monthly Review of Trade and Finance in Foreign Countries also and that now it would be a question of compiling the information given in these in a more attractive form and providing in the case of foreign countries figures for the same period as is covered in the Indian review.

* * *

The revival of our monthly trade supplement may be deemed an appropriate occasion for a survey of India's foreign trade, specially as the period covered therein brings to a close the first half of the current fiscal year. The statistical tables in pp. 1198 and 1199 provide a bird's-eye view of the general position of India's foreign trade in the period from April 1st to September 30, 1933. As we have pointed out in the survey appearing in the Supplement, though the month of September shows in certain important respects a change of an undesirable nature from the figures of the previous month or even the corresponding period of the previous year, the first half of the current fiscal year shows a welcome, and to some, perhaps, a surprising, change over last year. Exports of raw materials show but a slight fall in value as compared with 1931, in spite of the fall in the prices of commodities and show a more than 50 per cent. increase on the figures for the first half of 1932-33. Manufactured goods show an increase of less than a crore for 1932 while food, drink and tobacco show decreases both under exports and under imports. Imports have shown an unimpeded fall in all the three divisions in which they are shown in our statistical table; and as total exports are up by 10,48 lakhs over 1932-33, the balance of trade in merchandise for the first half of the current fiscal year comes to 17.33 crores in India's favour, as against an adverse balance of 8,60 lakhs last year. The balance of transactions in treasure amounted to 27.85 crores in India's favour, with the result that the total visible balance of trade has more than doubled itself, as compared with the previous year at 45.18 crores. The other indices of business activity, namely, railway earnings, shipping tonnage, and freight wagon loads, all show an unmistakable increase, so that one might say that the first half of the current financial year has seen India showing every sign of turning the corner in respect of her internal and foreign trade.

* * *

It may be useful to scrutinise the trade figures, with a view to ascertain the commodities which are the chief beneficiaries of the general improvement referred to in the last paragraph. The jute trade has been the principal beneficiary of this upward movement in India's foreign trade. The volume and value of both raw jute and jute manufactures have alike shown an increase over the figures of the two previous years. Exports of raw jute amounted to 471 lakhs in value as against 342 lakhs and 379 lakhs in 1932 and 1931 respectively, while the volume has increased to 305,000 tons from 190,000 tons and 234,000 tons in the two previous years. Likewise, exports of jute manufactures in the first half of 1933-34 amounted to 10.81 crores as against 10.58 crores and 10.21 crores; and the volume has steadily increased during the last three years from 313,000 tons to 338,000 tons and 331,000 tons. In raw cotton 1932-33 was a bad year, in as much as its first half saw the export of only 123,000 tons against 257,000 tons in the previous year. Much of the lost ground has been recovered during the period under review as exports amounted to 228,000 tons of a value of 13.07 crores against 6.75 crores and 14.28 crores in the two previous years. Rice and oil seeds are also on the upward trend, exports of the former amounting to 10,44,000 tons against 10,28,000 tons in the previous year. But as prices are still at a dead low level, the value has fallen from 8,67 lakhs to 6,31 lakhs. Oil seeds have had a much busier time. The volume of exports has increased from 298,000 tons to 576,000 tons, which compares favourably with 491,000 tons in the year 1931-32. The value, too, at 731 lakhs shows a marked increase over 469 lakhs in 1932 and 684 lakhs in 1931. Only tea has lagged behind all other principal export staples. At the end of September India has exported only 136 million lbs. against 174 million lbs. in 1932 and 152 million lbs. in 1931. But the value shows an increase from 836 lakhs to 858 lakhs.

* * *

The figures given in the above paragraph may, perhaps, be usefully summarised in the table below:

Volume and Value of Principal Exports in first half of fiscal year (value in lakhs Rs.)

	1933-34		1932-33		1931-32	
	Volume	Value	Volume	Value	Volume	Value
Raw jute 1,000 tons ...	305	471	190	342	234	379
Jute goods 1,000 tons ...	331	1,081	330	1,058	313	1,021
Raw cotton 1,000 tons ...	228	1,307	123	675	257	1,428
Tea million lbs. ...	136	858	174	836	152	904
Rice 1,000 tons ...	1,044	631	1,028	867	1,104	811
Oilseeds 1,000 tons ...	576	731	298	469	491	684

The most hopeful feature of India's foreign trade is that the increase in her exports of merchandise has been accompanied by a fall in the imports. If the outflow of gold should continue in the coming months and trade maintain the improvement of the last six months, the balance of trade would be more favourable to India than the most sanguine of us could have expected at the beginning of the year. In so far as one is inclined to think that the amount of gold available for export has dwindled and is dwindling and must soon reach its end, one should welcome

every sign that exports of merchandise will soon take the place of exports of gold in our balance of payments with foreign nations. It is difficult at such an early stage of this trade revival to divine with any measure of accuracy the causes that have contributed to the improvement in India's export trade. It is quite plausible that, as India's exports of raw materials have had a lean period extending over a longer time than even the present depression, it is likely that the recent increase in our export trade is only due to the low levels to which stocks in foreign countries have been reduced. It is only when one can feel assured that the major maladjustments, which stood in the way of a free interchange of goods between India and foreign countries, have been eliminated, that India can formulate her plans and programmes on the assumption that trade would continue to be on the mend. Much as we believe that behind all the fuss and bustle of trade talks and negotiations there is a slow process of recovery afoot all the world over, no Government would be justified in shouting at this stage of our progress out of the wood. For the intensification of trade barriers has continued all along, and it is not impossible that what time natural forces are tending towards a recovery, they are also about to be frustrated by artificial measures.

It is also difficult to resist the temptation to see if the results of the first half of 1933-34 contain any comment on the Ottawa Pact, which was put into force not long before. If we allow the period of 4 to 5 months for trade relations to adjust themselves to the Ottawa settlement, it may be said that the period covered by this review should be a period in which the working of the Ottawa Pact was in full swing. But it is well to remember at the same time that it is next to impossible to isolate the effects of the Ottawa Pact from the multitudinous forces that have had free play on international trade relations during this period. But the figures given in the last two tables on page 1202 may be studied, if only to watch the shifts in the directions of our overseas trade. It will be seen therefrom that, while the share of the United Kingdom in our import trade increased from 35.8 per cent. in 1932 to 41.2 per cent. in 1933, its share of our export trade declined from 29.4 per cent. to 28.4 per cent. The other parts of the British Empire have emulated the mother-country and effected an increase in their share of imports into India from 8.1 per cent. to 9.5 per cent., while reducing their offtake of Indian exports from 19.2 per cent. to 15.1 per cent. The other nations of the world have almost without an exception suffered a decrease in their import trade with India. And only Japan, U.S.A., Germany and Italy are in a position to claim that, while they have been content to reduce their imports into India, they have been ready to take more exports from this country. While it may be disputed whether all these stages may be attributed predominantly to the restrictian on India's foreign trade imposed by the Ottawa Pact, it would not be unreasonable to suggest that our trade with countries outside the Empire has been undergoing a shrinkage which has by no means had a compensation from the countries, to whom India has given special facilities.

PROPOSALS re: SILVER REDEMPTION FUND

Our Special Representative at Delhi wires:

Two important questions for careful and definite solution are in connection with the proceeds of any sales of surplus silver (to be retained by Government under arrangement proposed) and of any surplus realised on sale or revaluation. It is admitted that proceeds of silver sales and surplus on account of gold represent assets originally accumulated against issue of currency and as part of the ordinary currency business of Government. Such assets should, therefore, be considered as primarily earmarked for currency purposes. But does it follow that such assets should be directly or immediately absorbed in the currency reserves of the Bank? Government answer this query in the negative and suggest the creation of a separate fund to be called "Silver Redemption Reserve" somewhat on the lines of the present Gold Standard Reserve. This reserve would be invested by Government in its entirety in gold or sterling securities. Interest on this Reserve will not be added to reserve but credited to current revenue. It is suggested that the Silver Redemption Reserve should be allowed to accumulate until it reaches the total of 10 crores. As for the proposal put forward by *Indian Finance* that the Bank should be provided at the outset with external reserve in excess of 50 per cent., the Government consider that it is impracticable at present to decide finally on this matter. It is agreed that the whole of the Government's holding will in any case be handed over to the Bank. Apart from this, if there be any margin of other external assets which Government, at the time when the Bank is set up, did not consider it necessary to hand over to the Bank, and which it would consequently retain for its own purposes, Government's provisional suggestion is that the most suitable alternative method for appropriating any such surplus would be to transfer it as opening balance to Silver Redemption Reserve. As regards the surplus on account of gold, the Government consider that sales of gold are unlikely. In case of profit on revaluation, it is recognised that such paper gain should not be swallowed up in ordinary revenue, but should be devoted to some currency purpose and this most probably would take the form of additional fortification of silver redemption reserve. It is obvious that the essence of these proposals is to retain in the hands of the Government all surplus external assets over and above fifty per cent. and to utilise the interest thereon for current revenue purposes. The apprehensions of the Finance Member as framer of budget have got the better of the Finance Member as currency authority.

INDUSTRIES IN SOUTH INDIA

On account of the variety of industrial activity and the prospects opened out by the progress of electrification, the working of industries in South India is of more than provincial interest. It is gratifying to learn from the report of the Director of Industries, Madras, that, in spite of the serious impact of the depression on a predominantly agricultural province, there has been an encouraging response to the stimulus of protection and widespread electrical power. Plenitude of cheap money and the certainty of return consequent on protection have given a fillip to new investment, which has been dormant for a long time. The year covered by the administrative report witnessed the highest number of registrations under the Indian Companies Act. The authorised capital of the new companies amounted to over 235 lakhs and the paid-up capital to over 150 and 14 lakhs respectively in 1930 and 1931. This disparity between the authorised and the paid-up capital is deplorable in as much as it indicates, on the one hand, a lack of clarity in regard to capital requirements and, on the other, a readiness to convey false suggestions about resources and proportions of the concern.

* * *

But all the same, it is encouraging that during the year, 152 industrial undertakings were organised as against 94 in the previous year, and it is interesting that the new activity has centred round the districts covered by the recent electrification through the Pykhara Project. The Department of Industries is engaged in bringing home to the public the facilities which the favourable situation of the Pykhara electric power would make available for the establishment of various manufacturing industries. The department is already engaged on providing information on industrial subjects through the Bureau of Industrial and Commercial Information; and the report gives a gist of as many as 25 enquiries addressed to the Department, which were answered, presumably, to the satisfaction of the parties which addressed them. The public have evidently been not slow in taking advantage of the important facilities for the establishment of new industries. The cement industry has been started in Coimbatore; and it is learnt from the report that as much as 62,000 tons can be produced in a year with a corresponding reduction in the imports from outside. There has been an expansion also of cotton spinning and dyeing and more mills have been established in South India. Five cotton and spinning and weaving mills and two ginning factories have been established in the Coimbatore district.

* * *

It is noteworthy that the cotton mills, hosiery mills and the manufacture of handkerchiefs, specially associated with Madras, have experienced considerable difficulty in combating competition from Japan; and there has as yet been no mitigation of the obstacles that these industries are encountering. Japanese competition was felt to be particularly severe in the higher counts of yarn. Exports of Madras handkerchiefs increased to 36.30 lakhs; but the industry is now in a state of over-production following a period of good prices. The tanning industry has not recovered from the blow dealt it by the low level of prices; and even at the end of the year the heavy stocks awaiting disposal at London hung over the industry and trade like a threatening cloud. But the improvement in the general state of industry may, nevertheless, be set down. The output of manganese showed a notable increase from 4,978 tons to 13,492 tons and in value from 21,500 to Rs. 64,400. The mill production of yarn rose from 86.16 million lbs. to 102.96 million lbs.; and the production of cloth advanced from 68.82 million yards to 70.55 million yards. The area and yield of groundnuts during 1932-33 have been estimated at 3.5 million acres and 1.6 million tons as against 2.7 million acres and 1.2 million tons respectively in the year preceding. Exports, however, fell from 495,911 tons valued at 714.75 lakhs in 1931-32 to 349,962 tons valued at 559.88 lakhs in 1932-33.

* * *

As in the United Provinces and Bihar, Madras has also seen an expansion of the sugar industry. As a result of the protection afforded to sugar, many new factories have been established; and older ones, which have been moribund for a long time, have sprung into new activity. The area under sugar cane is estimated at 125, 220 acres against 116,105 acres in the previous year, and imports declined from 79,120 tons valued at 124.65 lakhs to 55,313 tons valued at 62.09 lakhs. The Director of Industries points out in his report that, if Madras is to be self-sufficient in regard to her requirements of sugar, an additional acreage of 35,000 should be brought under cultivation; and this would require the setting up of twenty 400 ton sugar factories. It may be supposed that with the progressive reduction of imports of sugar and the spectacle of sugar companies making good, more capital will flow into the sugar industry and that new factories will spring up to cope with the requirements of the internal position.

* * *

It is in respect of the expansion of acreage under sugar that the Department believe special measures

THE BELAPUR COMPANY, LTD.

NOTICE is hereby given that the Fourteenth Ordinary General Meeting of the Belapur Company, Limited, will be held on Monday, 20th November, 1933, at 4 p.m. (S.T.) at the Registered Office of the Company, Royal Insurance Buildings, Churchgate Street, Bombay, to transact the following business:—

(1) To adopt the Directors' Report and Audited Statement of Accounts for the year ended 30th September, 1933.
(2) To sanction payment of a Dividend.
(3) To confirm the appointment of N. B. Macbeth, Esq., as a Director of the Company.
(4) To elect Directors in place of Sir Purshottamdas Thakurdas, Kt., C.I.E., M.B.E., and Laljee Naranjee, Esq., who retire by rotation, but are eligible for re-election.
(5) To appoint Auditors for the current year and fix their remuneration.
(6) To transact any other business that may be brought forward by the Chairman.

The Transfer Books of the Company will be closed from the 16th day of November to the 30th day of November, 1933, both days inclusive.

By order of the Board of Directors,
For THE BELAPUR COMPANY, LIMITED,
W. H. BRADY & COMPANY, LIMITED,
JOSEPH KAY,
Managing Director,
Manager.

BOMBAY,
31st October, 1933.

N.B.—The Dividend when declared will be made payable at the Registered Office of the Company on and after the 5th day of December, 1933. The Dividend Warrants will be posted to those Shareholders whose names stand on the Register on the 16th of November, 1933.

to be necessary. And we are told that the Government are also considering the question of encouraging small growers of sugar cane by inducing them to join together and start co-operative sugar manufacturing societies. Such a development would avoid the abuses that might arise from the expansion of the sugar industry on the normal lines of capitalist investment. The Department of Industries appeals to the central banks to supply part of the capital required by such co-operative societies on the security of the land and plant and buildings. Other aids to the growth of sugar industry in South India have also been forthcoming. A special course in chemical engineering with special reference to sugar technology has recently been instituted in the Indian Institute of Science in Bangalore. The Andhra University has made provision for a course in sugar technology; and these institutions may be relied upon to meet the growing requirements of trained technicians for the sugar factories that are bound to grow in number in the future.

* * *

The minor industries have been working at a fair level of efficiency; but conditions are by no means helpful to their prosperity. The tile industry, for instance, one of the most important in the West Coast has produced tiles of good quality, which are exported largely to Burma and Ceylon. But a restricted demand has brought about unremunerative prices; and the report suggests that no appreciable improvement can be expected till a trade revival is in full swing. The aluminium industry has suffered from the fall in demand consequent on the decline in the price of brass and copper. The soap industry is better, if one might judge from the results of the Kerala Soap Institute at Calicut which realised a profit of Rs. 51,150 in spite of the keen competition from imported commodities and from indigenous goods made in the other provinces of India.

* * *

As regards the more technical question of the working of the State Aid to Industries Act critics of the measure would welcome the confession of the Director of Industries that the results "continue to be disappointing and, as will be evident from the foregoing, the position of the majority of the concerns to which financial assistance has been rendered affords little ground for satisfaction." The Act has worked as unsatisfactorily as ever and the instances of industrialists getting loans from Government bear no proportion to the real needs of industries as a whole."

* * *

Of the five applications for assistance, received during the year, two were recommended by the Statutory Board of Industries for aid, the applications of two others were rejected, and consideration of one was adjourned. Of the nine concerns which have received aid, three were working at a net loss and though in respect of almost all of them the loans are being recovered, it is unsatisfactory that almost all of them are not working successfully and one concern which had secured a profit has been using the loan for purposes other than those contemplated by the agreement.

INDUSTRY OLD AND NEW IN THE PUNJAB

The report of the Director of Industries in the Punjab confirms the general idea that in respect of industrial progress and prospects the Punjab has many features in common with South India. Though large-scale industry is somewhat more developed in the Northern Province, in the variety of industrial activity and in the possibility of more rapid development in the future through the facilities afforded by the hydro-electric schemes, the Punjab is not unlike the Southern Province. The year 1932-33 is notable for the completion of the Uhl River hydro-electric project which was opened by His Excellency the Viceroy on March 10,1933. The tariff of rates, at which power will be made available to various classes of consumers, has also been published. And the Government naturally expect that industry will have a vast expansion under the stimulus afforded by the provision of cheap power. But much would, doubtless, depend on convincing the public that there is scope for small enterprise to engage in numerous fields of industrial activity. The Department of Industries has done much in this regard through the Bureau of commercial intelligence which, according to the report, has answered over 4,000 enquiries on industrial, commercial and technical subjects. It has gone forward with the work of research, investigating the industrial possibilities of Punjab lac and the production of synthetic camphor from turpentine oil and in the purification and de-odorising of Punjab oil. The results of these enquiries have been made known to the public in a series of short notes dealing with the possibility of small scale industries, and the manufacture of many small articles of daily utility, such as buttons, razor blades, card boards, pen holders; and the report records with satisfaction the various signs that the suggestions have been adopted by people from time to time. As a result, applications for assistance in the solution of technical problems such as the erection of machinery and the overcoming of practical difficulties in industrial operations or improvement in existing methods were on the increase; and the Industrial Chemist claims to have met such requests for assistance with satisfaction to those who sought it.

* * *

While the outlook in regard to the establishment of new industries may thus be considered to be reasonably rosy, it is a matter for regret that the same cannot be said of industries which have been established in the past. Competition from the producing units of other provinces and of cheap imported articles from Japan continue to depress the in-

ternal provincial industries. The glass-making textile and hosiery industries suffered a great deal from such competition. The aluminium ware industry was also beset with similar difficulties. The luxury trades, art pottery, ivory inlaid work, etc., had a bad year. Oil milling, flour milling, handloom weaving and the brass and bronze ware industry suffered similar experience. The depression was, perhaps, worst in the carpet industry, where the cessation of the demand from America created wide unemployment in Amritsar. The two industries that were prosperous during the year under review are the woolen mills at Dhariwal and the manufacture of sports goods, which continued to prosper with a good foreign demand; but locally internal competition tended to cut prices to a low level. Healthy progress was also made in match, cigarettes and pen holder industries at Shahdara, Lahore and Amritsar respectively. It speaks well of the robust outlook of the province that in spite of the parlous state of the older industries, the year 1932-33 saw the establishment under the Indian Factories Act of 647 new factories as against 673 in 1931. The Punjab took advantage of the protection afforded to the sugar industry to open 35 new sugar factories, the majority of which were small scale concerns employing the open pan system. Another equally encouraging development was the opening of 25 hosiery factories. There can be no doubt that, when the present storm of the depression blows over, the Punjab will take its place in the vanguard of Indian industrial development.

IMPACT OF ECONOMIC NATIONALISM

Mr. S. N. Gupta, the Indian Trade Commissioner at Hamburg, has raised a disquieting problem in his review of Indian trade with Continental Europe during the year 1932-33. Mr. Gupta would seem to convey the suggestion that India must be prepared for a consistent decrease in her trade with Continental Europe. He points out that during the year there has been a definite intensification of barriers to international trade in nearly every European country. The administration of the exchange control system has been made stricter in countries in which it was already in force. Other countries have adopted modifications of the system for further protection of their weakened currencies. The position has now been reached in most countries that, not only is new business out of the question, but only essential imports are permitted entry, and, even in the case of essential imports, quantities are so rationed that bare requirements are just covered. One can well understand that Continental Europe is about the worst sinner in respect of raising barriers to international trade; for it is the smaller nations of the Continent to whom the new gospel of economic nationalism has a particularly strong appeal. For most of these nations suffered a great deal during the war, owing to the lack of supplies of essential foodstuffs consequent on the blockade occasioned by hostilities. It must also be remembered that these countries contributed a great deal to the prevalent over-production, when they returned to the production of the principal agricultural and industrial staples after the havoc caused by the war. And, in as much as the reduction in supplies caused by the War had been made up by other countries and it is always difficult for a country to forsake the industries once established, the maladjustments in the economic relations of the world have been aggravated. It is in the Continent of Europe, too, that the balance between agricultural countries and industrial countries resting on mutual interchange of their commodities was first gravely disturbed. As a result of the large volume of international indebtedness caused by the war, and given a definite shape by the activities of the League of Nations in respect of the restoration of European currencies, most of the small countries of Central Europe were more hard put to it to find the means to meet their foreign obligations than countries outside Europe. Mention must also be made of the circumstance, that has resulted of the Peace of Versailles and the shuffling of political boundaries and the creation of new states, there was an intolerable addition to the weight of tariffs, protective and otherwise, on international trade as a whole. In the peculiar difficulties caused by the present depression, each European country has felt obliged to try to reconstruct its own national economy on lines which, to be of definite and immediate effect, had necessarily to overlook the large implications of free international trade. In conditions like these, it is hard to expect that India would be able to maintain her trade with Continental Europe at the same level of value and volume.

* * *

It is now learnt through the report of the Indian Trade Commissioner at Hamburg, that nearly all our principal staples have suffered seriously in the German market.

Imports of jute into Germany during 1932 amounted to 759,384 doppel-zentners (10 dz—1 metric ton) as compared with 834,578 dz. in 1931, a decrease of about 10 per cent. Imports during the quarter January to March, 1933 were 275,960 dz. as compared with 202,115 dz. for the corresponding period of 1932. These figures reflect the increased activity which was a feature of the jute market in the early part of 1933. Holland and France heavily increased their consumption of raw jute as compared with the previous year, the former by as much as 50 per cent. and the latter by 40 per cent. Belgium, however, decreased her imports by 20 per cent. There was a substantial falling off in the German consumption of jute bags from India, 5.251 dz. in 1932 as compared with 10,949 dz. in the previous year.

The consumption of Indian cotton in Germany decreased heavily in 1932 as compared with 1931, imports falling from 290,914 bales to 113,179 bales. Holland and Belgium, however, slightly increased their takings of Indian cotton as compared with the previous year, while imports into France increased by as much as 50 per cent. Germany's increased imports of American cotton in 1932 more than compensated for her smaller takings of Indian cotton. The position of Indian cotton *vis-a-vis* American in Germany in 1932 was in all probability partly due to the negotiations that have been in progress between Germany and America for some time past for large-scale purchases of American cotton.

* * *

For the period January-March, 1933, imports of Indian cotton increased to 38,114 bales as compared with 35,362 bales for the same period in 1932, whereas American cotton imports receded to a certain extent.

It may be of interest to mention that attempts on the part of various authorities to effect bulk purchases of cotton from other countries have hitherto been strenuously opposed by Hamburg and Bremen merchants on the ground that a reduction in the imports of Indian cotton would impair the technical organisation of German mills, as they are intended to consume a fixed ratio of short staple Indian cotton.

* * *

Imports of Indian hemp into Germany increased from 4,770 dz. in 1931 to 17,774 dz. in 1932, a fourfold and very welcome increase. For the quarter January-March, 1933, imports rose to 7,943 dz. from 4,263 dz. during the same period in 1932.

The only encouraging factor is the expectation that the investigations and experiments, being carried on in India for the improvement of our Indian hemps will result in an increased demand for them in Continental countries.

* * *

Imports of coir fibre into Germany increased from 4,951 dz. in 1931 to 5,078 dz. in 1932; at the same time yarn imports also increased from 58,847 dz. to 67,933 dz. These increases are eminently satisfactory and are evidence of the continuing popularity of coir for the manufacture of cheap mats, rugs and brushes, Holland and France also increased their takings of coir yarn, but Belgium decreased her imports by a slight amount.

Most of the northern European countries decreased their imports of Indian rice during 1932 as compared with 1931, though total imports remained pretty much on the same level. The decrease in the cases of Poland and Holland was very severe, the latter country diminishing her takings to a third of those for 1933, while the former reduced her imports to one-fifth of what she took the previous year. Belgium also reduced her share by one half. German imports of unpolished Indian rice decreased to 2,198,775 dz. during 1932 as compared with 2,566,865 dz. in the previous year. Total German imports of unpolished rice decreased very slightly. The Dutch East Indies and Persia improved their position during the year, the former's imports rising from 22,166 dz. in 1931 to 210,918 dz. in 1932. It is however, satisfactory, to observe that India is still the predominant supplier of unpolished rice to Germany.

* * *

The set-back to the progress of Indian tea consumption in Germany, which was noticed last year, continued to operate during the year under review. Imports of Indian tea fell to 12,604 dz. in 1932 as compared with 15,532 dz. in the previous year. On the other hand, India's chief competitor in the German market, the Dutch East Indies, increased her imports by 1,085 dz. to 21,586 dz. The position has again been almost reached where India imports are half of Java-Sumatra imports, as was the case during 1924 and 1925. Since that time, India had rapidly improved her position *vis-a-vis* the Dutch East Indies, but she has now lost a good deal of ground.

* * *

The imports of Indian raw hides into Germany, India's largest European purchaser in this line, make depressing reading for the year under review. There was a heavy decline in the imports of wet hides as compared with the two previous years, the imports of those years being themselves far below the normal quantity taken by Germany. At one time India was easily the largest supplier of dry hides to Germany, but she has been ousted from this position by the Argentine and Brazil, and stands only third now on the list.

* * *

Business in the two principal oil-seeds from India, groundnuts and linseed, was extremely bad during the year under review, in all the Continental countries. Holland, France and Germany all made heavy reductions in their purchases of Indian ground-

nuts. Dutch imports were a third of what they were in 1931, and France reduced her takings by 20 per cent. Imports of decorticated groundnuts decreased by 350,000 tons as compared with 1931, a very heavy decrease indeed, and that even the undecorticated nuts, which form a very small proportion of the total imports, were reduced by 63 per cent.

* * *

Imports of shellac into Germany, India's best customer for shellac, were reduced to 19,216 dz. during the year as compared with 24,426 dz. in 1931, and 31,156 dz. in 1930. There has thus been a progressive decrease in the shellac trade to Germany.

Unlike Germany, France increased her purchases of shellac during the year by 20 per cent.

* * *

The tale unfolded by Mr. Gupta, which has been summarised in the foregoing paragraphs, is, no doubt, a doleful one. When it is learnt that Continental Europe, comprising such important customers of India, is following more and more closely a policy of economic nationalism, it is incumbent on India to think out ahead the repercussions of such policies in Europe on her own economic position. Attempts have been made in certain quarters to suggest that the decline of our exports to the Continent suggests that India must rely more and more on the Empire countries for that balance between her imports and exports without which there can be no stable economic system. It has also been contended that in most lines our exports have decreased owing to the prevalent poverty of Europe and that of all the countries of the world, it is the nations of the Empire, which have come out fairly prosperous from the prevalent depression. Those who argue in this manner overlook alike the implications of an international trade system and the economic potentialities of India taken by itself. It seems of late to have been assumed too tacitly that the British Commonwealth of Nations can have a world of its own, both in politics and in economics, and that its feelings towards the rest of the world in economic turmoil might be nearly one of sympathy, that, too, the passive sympathy of an outsider more or less unaffected by the sufferings of others There is thus little to warrant such assumptions. It may be that with the resources of the Empire fully developed, it might be possible to frame a scheme of Empire economy which is more largely self-sufficient than any one unit of the Empire, barring India, can be. But this is, assuredly, too fantastic an idea to form the objective of immediate policy. So far as India is concerned, with her ties with the Empire yet to be tightened by the bonds of cordial equality, the alternative is not so much between the Empire and the world but between a system of world trade as a whole and a system of economy, in which India will be predominantly self-sufficient. We do not claim to know what ideas Mr. S. N. Gupta had in his mind when he painted the picture of the future commercial relations between India and Continental Europe in such dark colours as he has done. But we are sure that it is totally wrong to interpret the findings of Mr. Gupta as an additional argument for persisting in the perilous path of Ottawa. Our exports to Europe are, in large part, such as can be utilised in domestic manufacture and domestic consumption. If the European countries, for reasons over which they severally seem to have little control, should persist in the path of economic nationalism, India has no alternative but to persist in a similar course of action for herself, but with greater confidence that Nature has equipped her to be more self-sufficient economically, than any of the numerous nations who have till now been her valued customers.

THE LAKSHMI INSURANCE COMPANY

The Revenue Account and Balance Sheet of the Lakshmi Insurance Company for the year ending 30th April, 1933, have just been released to the public. We are glad to note that the strength and stability of this concern is increasing year after year; and to-day it is one of the foremost Indian Life Offices. That within a period of nine years, it has come to the forefront of Indian Insurance business, is ample testimony to its efficient management. During this short time the company has so widely developed its organisation that its New Business and total business in force have been steadily increasing, and during the year under review, the New Business of the company has increased to Rs. 80 lakhs from Rs. 70 lakhs last year.

* * *

The revenue account shows that the total income of the company during the year amounted to Rs. 16.4 lakhs. Of this the total premium income was Rs. 14.4 lakhs and the interest income less income-tax was Rs. 1.9 lakhs. The outgo for the year includes the management expenses of Rs. 4.7 lakhs, claims by death and maturity amounting to Rs. 1.7 lakhs, shareholders' dividend amounting to Rs. 50,000, allocations to various funds amounting to Rs. 37,000, miscellaneous expenses of Rs. 70,000 and an addition of Rs. 8.4 lakhs to the life fund. The life fund has increased substantially during the year by Rs. 8.4 lakhs to Rs. 37.9 lakhs. The policy of the Directors, in not only maintaining but increasing the investment reserve fund of Rs. one lakh created by the company in 1931-32 when Government securities were much depreciated in value, shows that they are cautious and tactful and provide for all future contingencies. They have also set apart a sum of Rs. 17,000 out of their recent valuation surplus (Rs. 5.4 lakhs) as policyholder's bonus reserve fund.

* * *

The balance sheet of the company as at 30th April, 1933 shows on the liabilities side, a life fund

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 89/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 3¾ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 2 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3 per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 3½ per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

of Rs. 37.9 lakhs, reserve funds of Rs. 1.3 lakhs, paid-up capital of Rs. 1 lakh and outstanding claim of Rs. 8 lakh. On the assets side Giltedged securities account for Rs. 12.5 lakhs (or 30 per cent. of the total assets Rs. 42 lakhs), mortgages on real property amount to Rs. 16.9 lakhs or 40.2 per cent., house properties amount to Rs. 2.3 lakhs or 5.5 per cent., policy loans amount to Rs. 1.5 lakhs or 3.6 per cent., outstanding premium amount to Rs. 1.2 lakhs or 3 per cent. and cash accounts for Rs. 5 lakhs or 12 per cent. The investment policy of the company seems to be judicious in all respects except that the mortgages item accounts for a little too much of the total assets. There can be no denying the fact that well chosen mortgages are good interest yielding investments best suited to life office funds. But we are of opinion that not more than 30 to 35 per cent. of the assets of a life office should be so vivested. We are told that out of this Rs. 17 lakhs of mortgages, more than Rs. 10 lakhs has been granted to industrial concerns. This is, indeed, a good help done to the Indian Industries.

* * *

The valuation of the company's assets and liabilities as on 30th April, 1932, revealed a surplus of Rs. 5.4 lakhs, of which the policyholders' share amounted to Rs. 4,62,900 and that of the shareholders amounted to Rs. 52,000. The Directors have recommended a bonus of Rs. 18 per thousand per annum on whole life policies representing an increase of Rs. 6 per thousand on the previous rate and a bonus of Rs. 15 per thousand per annum on Endowment Policies representing an increase of Rs. 5 per thousand.

THE EDUCATIONAL SYSTEM

The speech of Dr. W. S. Urquhart, in the Calcutta Rotary Club on Tuesday last is the first significant protest to all the murky cant to which those, who have some claim to a sound education, have been subject of late. "University education," Dr. Urquhart bitterly complained, "is not a very popular subject at the present time amongst certain classes of people, not unrepresented in this gathering." To some, the name "student" is anathema, on the ground that political terrorists have come largely from the student population. To others—and these are a more cosmopolitan lot—the graduate is an object of contempt, their preferences for service or other favour being in inverse ratio to the time which their unfortunate supplicants have spent in school or college. The political prejudice against the student, Dr. Urquhart easily disposed of by pointing out that "because some terrorists have been University students, it does not follow all University students are terrorists, any more than it follows that, because ships are made of wood, all wooden articles are ships". But, whether the antipathy to the student is on political or other grounds, his detractors meet on a common platform for denouncing the present system of education in the country. Politicians of all parties and creeds are united in their condemnation, though for different reasons. The average businessman turns up his nose at an unemployed graduate, as if the latter were a confirmed never-do-well. And they often agree in the suggestion that with a more utilitarian touch, or rather a vocational twist, our educational system would succeed in turning out the right type of young men. Dr. Urquhart's answer to this demand is simple and forceful:

"Your change over to technical education would be an excellent panacea if it were a case of posts waiting until men are trained to fill them. But that is not the position. Those turned out of technical training schools find the greatest difficulty in securing employment, and there are many trained to the utmost pitch of efficiency in the West who can find nothing to do on their return to this country."

* * *

Dr. Urquhart has hit on a point which we had urged in a special article on the "Industrial Problem" in our Year Book for 1932. The provision of technically trained men naturally follows an economic demand therefor; and to believe that the problem of unemployment can be solved or that the university lads would be better specimens of humanity, if the instruction were made more vocational, is to evince an ignorance of the experience of other countries or an incapacity to think out the question logically. Vocational training and industrial expansion can at best go hand in hand; and the fact that there is at least as much unemployment amongst technicians as amongst the young men with a more general education should be a sufficient answer to those who cry for a more vocational training.

* * *

Dr. Urquhart's culture and insight into the practical are alike brought out in the observation that the "difficulty is not so much in the educational system as in the economic situation." And he added that "the fact that Rs. 30 only are offered to so many graduates may be just as much a condemnation of our method of distribution of rewards as of the educational preparation of the candidates." The restraint and urbanity of the above statement are, no doubt, their charm. But it is useful to probe into the psychology behind the demand for vocational instruction. Some of those, who condemn the present educational system, doubtless, belong to the class of men who embody in themselves and their careers the truth of the saying that nothing succeeds like success. Strangers alike to school and college, they enter "life," so called, at an early age. A variety of advantages, none of them of any value to others besides the individual concerned, push them up the ladder, by slow stages, till all at once they bloom into flowers of the nation, the beacon for the young, and all the rest of it. They imagine themselves to be endowed with all the best qualities and put themselves forward as the models on which youth should shape itself. Thence the gross philistinism that scorns learning as waste of time and schools as drains on the public purse. It is up to Dr. Urquhart and other men of light to tell the average man that no nation can enrich itself by impoverishing the mind of youth.

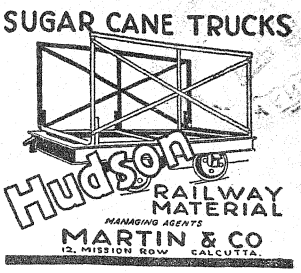
Clive Street Gossip



Eavesdropper wires from Simla :—

On the ratio question what might have been a Battle Royal and a sensational success for a lower exchange turned out to be a stupid skirmish and complete rout. At one stage, Sir George Schuster was afraid, I understand, to put the question to vote, lest he be defeated on a vital issue. But what with the parochialism of some of the Bengalee members, the blatant inconsistencies of some of the unrepresentative legislators from Bombay, and the dummy quality of those from Madras, Sir George had a smooth passage for his eighteenpence ratio. Two important amendments were moved, respectively, by Mr. Vidya Sagar Pandya and Hon. Mr. Hossain Imam, Sir Cowasji Jehangir, the sponsor of the night-shift idea for ratio changes, did not record his vote on the side of the amendments. Mr. B. Das remained neutral, partly due to his misunderstanding others and partly to others misunderstanding him. The Hon. Mr. B. K. Basu, who—a pleasant shock to most ! was most progressive in all the stages hitherto covered, put up his hand in favour of Sir George. His plea for forsaking the Opposition was "strong feeling on this question in Bengal". The same Honourable member forgot the "strong feeling in Bengal" when he made, only a few months ago, a retrograde speech on the Ordinances in the Council of State. Another member, who loyally stood by the Opposition on every question and deserted it in regard to the ratio, was the Hon. Maharaaj Kumar of Nashipore. Also due to the nightmare of opinion in Bengal ! Sir Homi Mehta, who harangued, from a manuscript speech, the audience in a meeting of the Currency League over the need for a ratio lower than a shilling, voted against the tenets of the Currency League in the Select Committee deliberations. In the lounge of the Maidens, after this pitiful demonstration of inconsistency, he was hotly arguing that the question at issue in the present Bill was the Reserve Bank and not the ratio. And if the ratio were to come for discussion as the one and principal topic, the Bombay knight would be prepared, I gather, to deliver another manuscript oration, not less strident than the last one. It appears that the Bombay knight asked what he had to gain by *Kushamatkaroing* the Almighty Gods.

* * *

I ask, What?

Which reminds me of a piquant narration of a friend who served the Powers-that-be as faithfully as Cardinal Wolsley did and who has not yet had the disillusionment of the Cardinal. After all, this super-loyalty over umpteen years, he felt he had not received an adequate reward. In this state of discontent, he approached the head and chief of the Administration and delivered himself of this grievance : "Sir, everyone says that I have sold the country. But selling means that I must have received aught in return. Seeing I have got nothing, I realise that I have made a present of the country to you !" Whereafter the eyes of the authorities were opened to this serious omission ; and the gentleman, by being awarded a C.I.E., was enabled to transfer the transaction of the free gift of the country into a sale once again. I do wish that all loyalists would at least secure a similar *quid pro quo*.

* * *

To return to the Select Committee's comic-tragedy. The amendments were supported by ten members whose names deserve to be placed on record : The Hon. Rai Ramsaran Das Bahadur, the Hon. Hossain Imam, the Hon. Mr. Mahotra, Messrs. Gaya Prosad Singh, Ashar Ali, Satyen Mitra, Bhupat Singh, Vidya Sagar Pandya, Sant Singh and S. R. Pandit. The accession of Mr. Pandit is as noteworthy as the defection of Mr. Basu. Then came the voting on the two clauses relating to sale of sterling at 1s. 5 49/64d. and purchase of sterling at 1s. 6 3/16d. These ten members reinforced by Sir Cowasji Jehangir and Mr. B. Das voted against the clauses enthroning eighteenpence ratio. Fourteen voted on the Government side. If only Sir Homi had remained true to his Currency League performance ; Mr. Basu had remained loyal to the nationalism of the earlier days ; and the Maharaj Kumar of Nashipore had not succumbed to this temporary fit of provincialism, the eighteenpence ratio would have been thrown over by 15 against 11 for Sir George Schuster. What an achievement would it have been ! The Finance Member would appear to have given the threat that, if the Committee passed any other than eighteenpence by a majority, the Government would withdraw the Bill. And who would not have heaved a sigh of relief that a measure so retrograde as the present one has been thrown on the scrap-heap ? In the sixth pamphlet issued by the Currency League, the full text of Mr. H. H. Sawyer's speech on the ratio is given ; and his concluding words are terse, forceful and pointed :

The ratio question must be Reviewed, Reconsidered and Revised.

Reviewed before the Reserve Bank Bill is passed.

Reconsidered in the light of present day economic conditions

THE GATEWAY OF INDIA

Bombay, November, 15.

The Bombay City Improvement Trust, which was stigmatised as "black monster" by Sir Dinshaw Wacha about a decade and a half ago, has now been amalgamated with the Bombay Municipality. The first meeting of the Improvements Committee of the Bombay Municipal Corporation was held on Tuesday, when Mr. Mohanlal Desai was unanimously elected Chairman of the Committee for a period of one year. One of the objects of the amalgamation was retrenchment in the cost of management. The liabilities, incurred by improvement schemes, necessitate additional taxation, and the Chairman of the Committee admits that the five main problems are: the compulsory addition in the general tax by one per cent., the terminal tax, the disposal of the Trust land, the collection of rents from Trust properties and the service staff. The surplus cash balance is being gradually wiped out. In reply to the Government requiring the Municipality to point out new sources of revenue to meet the Trust deficits, the Bombay Corporation requested the Government to levy a terminal-tax to cover part of the deficits. The Government of Bombay have endorsed the proposals; but, the Governor's countenancing the claims of the Bombay suburbs for exemption from the terminal-tax, is rather disconcerting. Mr. Mohanlal Dessai thinks that, if the tax is either not imposed in toto or is reduced, the problem of finding Rs. 7,00,000 to meet deficits will remain unsolved.

As regards the large number of open buildings, both developed and undeveloped, the demand for lease or purchase at a fair market price is believed to continue for a long time to come. In this connection, the amended Municipal Act makes provision to meet the wishes of prospective purchasers, with limited funds. There is a scheme, under which monies, on the security of the Trust plots and buildings, can be advanced. As regards collection of rents from Trust properties, about 20,000 monthly tenants have to pay more than Rs. 2,00,000. The bad debts amount to about Rs. 10,000 per month. But the Commissioner is shortly expected to revise the system of collection, with a view to stop the losses.

The income of the Bombay Corporation for the year 1934-35 is estimated at Rs. 3,12,59,000, and the expenditure at Rs. 3,36,58,000. The deficit, therefore, is expected to be a sum of Rs. 23,99,000. The yield from raising the general tax by one per cent. is estimated at Rs. 11,44,000, which is to be credited towards the cost of the improvement schemes. The water-rate is to be increased from 3¾ per cent. to 4 per cent., yielding an additional income of Rs. 2,00,000. From the plant and machinery depreciation fund, a sum of Rs. 5,48,000 is proposed to be transferred to revenue; a similar transfer will be made of the sum of Rs. 1,65,000, being the net interest on the net premium fund. These additional sources reduce the deficit to the sum of Rs. 3,47,000, which is proposed to be met from the surplus cash balance.

In framing the budget estimates for 1934-35, the Commissioner assumes the temporary cuts in salaries, volunteered by the staff during the last two years, to continue next year also. The aggregate saving on this account is estimated at Rs. 1,81,000. The 10 per cent. cut, enforced by the Government on the salaries of their employees in 1932-33, was reduced to 5 per cent. in the current year. It is hard, therefore, to expect the low-paid Municipal employees to continue their voluntary sacrifice for another year. It is to be hoped that the Standing Committee and the Corporation will look into this matter and afford relief to the Municipal employees.

The Bombay Millowners Association entertained the Governor of Bombay to dinner on Monday at the Willingdon Sports Club. Mr. H. P. Mody, in proposing the health of the Governor, indulged in the usual rhodomontade of the suave treatment at the hands of the Governor. In illustration, he mentioned that the White Paper on the labour situation, issued by the Bombay Government some years ago, and for which His Excellency was personally responsible, might be quoted as a striking proof of his scrupulous fairness of his close study of the facts of every problem. As for the rest, his speech was, as usual, one drone of fulsome praise.

In refreshing contrast, the Governor, in his address, administered wholesome advice to the millowners, as regards their pre-eminent duty to the rest of the community. He drew pointed attention to the fact of the consumer's reluctance to pay higher prices on account of protection to the mill industry, than those which were obtained in an open market. He also viewed with some concern cuts in wages and the forcing down of the standard of life of the worker. He said: "As you know, I and my Government have always done our best to promote your interests and to support your suggestions; but, I am not sure that there is not, perhaps, a tendency to rely too much on tariffs and not enough of self-help. Seven years ago, the Noyce Committee pointed out the defects in the organisation and management, all of which have not yet been put right. Then the Fawcett and Whitley Commissions made recommendations in other directions, recommendations which, to some extent, depended upon prosperity—but some of which involved no expenditure, and yet they have not been adopted. But, there is no doubt that you will have to be ruthless in the excision of all that is unhealthy and clogging in the life of the industry you represent. There is much to be done, as will be obvious when it is realised that there are a few mills that have no dispensary and quite a number which still do not provide creches for their women workers. The industrialists of this Presidency, therefore, can exert definite influence towards improving the lot of those working on the countryside and be a powerful factor in the cause of village betterment by creating amongst their workers a desire for cleanliness and hygiene—a gospel that these workers would preach when they return to their villages."

The Governor was very sympathetic in making reference to the cotton-grower, whom the economic depression has hit particularly badly, and whom he commended to the great consideration of the millowners. In support of his recommendation, he stated: The price of Broach cotton last year, as we know, was barely 75 per cent. of the prewar price, and whereas during the pre-war period Indian cotton-growers exported cotton worth Rs. 33 crores—a figure which rose to Rs. 65 crores during the post-war period—in 1931-32, they realised only Rs. 23 crores and in 1932-33 only Rs. 20 crores.

The Governor aptly posed some conundrums. He said: "A year or so ago, tariffs were regarded as a cure for all your ills. You have your tariffs, but I do not hear any cries of gratitude from a happy and opulent industry. Five years ago, we were sure that a substantial reduction in labour costs would set the industry firmly on its feet. To-day the earnings of labour have been reduced, yet the dividends are few and far between. Why is it, for instance, that a tax of Rs. 1 a bale on cotton, we are told, should be a more serious matter for the industry than fluctuations of Rs. 50 per bale in the cotton market, or a tax of 75 per cent. imposed on the products of your competitors is negligible, compared with a tax of 2½ per cent. on machinery and stores."

Surely, the mill-owners did not bargain for all this, when they invited the Governor of Bombay to dine with them. The crux of the situation is in the scrapping of the managing agency system. A drastic amendment of the Joint-Stock Company's Act will go a long way to improve the mill industry. While the Governor was particularly careful in mentioning the labourers, the cotton-growers and the general consumer, as the victims of the Bombay industrialists, he forgot the shareholders, who, strangely, are equally their victims, thanks to the managing agency system.

The strike in the mills looks like having come to stay. Last week, the strike in the Jam mills was referred to. On Saturday, a thousand weavers of the Jacob Sassoon mill at Parel struck work, as a protest against reduced wages. The operatives in the spinning department followed suit, and the mill was closed for the day at 9-30 a.m. Then followed the meeting at Lalbagh and processions along De Lisle road, later. During the procession, the mill-hands halted in front of the Appollo Mills, under the same management as the Jacob Sasson Mill, and many of the processionists entered the mill compound, with a view to dissuade the men, there, from working. The police soon arrived on the scene, and dispersed the crowd. But six of them, who gave more trouble, were arrested.

The obsequial process of the Currimbhoy group is still being protracted. On Monday, an extraordinary general meeting of the shareholders of the Ibrahim Pabancy Mills Co., Ltd., was held at Currimbhoy House. After some discussion, it is understood, that a committee was appointed consisting of six members to enquire into the affairs of the company, in consultation with the Directors and to submit a report within a week.

On Wednesday, a similar meeting of the shareholders of the Bradbury Mills Ltd., which formed part of the Currimbhoy group of mills, was also held at the same place. A committee of five members is understood to have been appointed to submit concrete proposals in regard to the future management of the company. The shareholders were asked to appoint agents or managing agents in place of the former agents, Messrs. Currimbhoy Ibrahim and Sons, and to give the Board of Directors such instructions of authority as the shareholders might think fit. As already said, the committee of five members would co-operate with the Directors in framing concrete proposals.

On Thursday, a similar meeting of the shareholders of the Indian Bleaching, Dyeing and Printing Works Ltd., considered two offers to take over the agency of the concern, namely, Messrs. Mayer Nissim and Co. and Mr. Surji Valabhdas. The shareholders' committee would meet the Directors for fixing the terms on which the agency can be handed, and decide the matter finally on November 24. It is possible that more offers might arrive in the interim.

The same day the depositors, in Bombay, of the Indore-Malwa United Mills Ltd., met at the same place for the same purpose. A committee of nine depositors was appointed to investigate into the affairs of the mill company, and draft a scheme, and take all possible steps to recover the amounts due to the firm. The depositors will meet again, on Saturday, to consider the steps to be taken to restore the affairs of the firm, to better order. Mr. Mathurdas Mattani, who presided over the meeting, had already visited Indore on October 31, in the Company of five other depositors. He expressed the view that, if a proper scheme for the reconstruction of the firm was drawn, there was every possibility of the depositors finding their investment safe.

The affairs of the Currimbhoy Mills reverberated even in far away Hyderabad, Deccan. The shareholders met and requested the Directors to withhold, mainly, the transfer of all shares belonging to the managing agents and the payment of all monies and commissions due to them. The meeting also asked the Directors to postpone the assignment of the managing and selling agencies to Sir Akbari Hydari, till after the general meeting was held.

The day is not far distant when Berar will challenge Broach for the place of the standard cotton. Mr. Ritchie, the Director of Agriculture C. P., in opening the agricultural show at Akola Governmental experiment farm, said that the cotton, which is spinning 8 counts now, will yield place to one, spinning 26 to 28 counts. The results of the experiment, carried on at the Akola Farm, were made available to the cultivators of Berar. The researches in the improvement of the cotton crop of the province have shown that, by the inclusion of groundnut as a rotation crop with cotton, an increased revenue of fifty to one hundred per cent. can be obtained. But, the chief obstacle in the way of the extension of groundnut cultivation has been the high cost of lifting the cotton stalks and the scarcity of labour, at the time of harvest. Experiments have, however, proved the utilisation of cotton stalks as manure. The difficulty of lifting them has also been solved by the introduction of a special plough, which is devised simultaneously to lift and plough. Besides removing the aforesaid difficulties, the special plough reduces the cost of lifting by Rs. 5 per acre. The co-ordinated advancement in improving the strain of cotton, facilitating the lifting of cotton-stalks and ploughing simultaneously, and using them as a manure, bids fair to make the future of Berar very bright, indeed.

"WATCHMAN"

(*Continued from page 1193*)

and

Revised accordingly, and immediately.

If these things are denied us then we must see to it that the Reserve Bank Bill should not be allowed to pass in the Assembly.

It was in the power of the Select Committee to have thrown out the ill-shaped Bill and thereby earned the gratitude of the country. As it is, on them will be the responsibility for co-operating in the effort to forge financial fetters that cannot be broken for all time. It is, however, satisfactory that Mr. B. Das was able to carry through his proposal that, at the end of three years, the Central Board should recommend to the Government to review the currency standard of India if, in their opinion, international monetary position became clear and stable. This resolution is to be incorporated as a new clause. This furnishes no solution to the ratio problem. It does not take us far. But, in the spirit of being grateful for small mercies, one should feel happy that the second and third clauses of the Preamble are hereby given a definiteness as to the authority who is to set the ball in motion.

I understand the Report of the Government as well as the Minute of Dissent is ready. They are to be signed by Saturday. Ten members are dissenting from the majority report on the questions of State Bank versus Shareholders Bank, the composition of the Reserve, compulsory deposits, encouraging bank branch development through interest-free deposits to new branches opened by "approved" banks etc. Nearly twelve are expected to sign the dissenting minute on the Ratio. This must be considered as a notable achievement in a Committee when, as I said at the outset, the representatives of one province were all dummies, those of another were unrepresentative, while those of a third were haunted by the ghost of parochial prejudice.

Eswar Appa

SOUTH INDIA

(From Our Correspondent)

Madras, November 14.

By its decision to adjourn the discussion of the resolution pressing for a remission of land revenue in the ryotwari area, the Madras Legislative Council has displayed a deplorable indifference to the one problem, on which the whole of the Presidency has been engrossed for the last three years. The demand for remission was made as soon as, in the disastrous decline of prices that has happened during the last three years, the price of agricultural products came below the level of prices assumed in the last settlement. The logic of this demand is, therefore, quite clear. The very reason of a periodical settlement of land revenue is that the amounts payable by the ryots should be such as to leave them a certain amount of income at the level of prices which may be presumed to rule till the time comes for the next settlement. And naturally, when the price of paddy and groundnuts goes below the level assumed in the settlement, the ryots are on strong ground, if they demand that the amounts payable by them shall be changed in consonance with the fall in prices. There can be no doubt that, if prices increased, the Government would make every endeavour to get more out of the ryots. And they must be prepared, when the movement of prices is adverse to the ryot, to afford him the necessary relief. The decline in prices during the last three years has been such that no one can possibly contend that at this level the ryot can cover even the ordinary costs of production. And yet year after year the Government have stolidly refused to meet the reasonable demand of the ryots. It has now come to a pause in which landholders in ryotwari areas feel like challenging the Government to carry on the cultivation of their lands and to get enough out of it to pay the kists demanded of them. During the last few years the lanholders' organisation in Tanjore has busied itself with the issuing of pamphlets which set out in full the costs of production and the charges which the landowners have to meet. It will be evident from these pamphlets that justice and reason are entirely on the side of the agriculturists.

It is equally true that reason and justice have not weighed in the least with the Government in their land revenue policy. Mr. Stokes, the Finance Member of the Government of Madras, has, no doubt, done better than his confreres in other provinces in respect of preserving the balance of the provincial budget. But it is time that he pauses to think at what cost such a balance is being preserved. Balanced budget is, no doubt, preferable to a state of continuous and heavy deficits, such as have been occurring in Bengal or Bombay. But when the resources, with which the budgets are being balanced, are found from hard-pressed ryots who are being driven to leave their lands fallow, it is time to consider the entire finances of the provincial government *de novo*. It it can be shown by Government that with a fall in land revenue the provinces would be faced with a heavy deficit, this would, in the present circumstances, be an argument rather for drastic retrenchment and economy in administration, than in the continuance of the Government's demand upon cultivators at its present level. Perhaps, Government are less opposed to retrenchment than to remission of land revenue. And in their anxiety to keep the services and administrative costs at their present level and protect them from the encroachment of the popular Legislature, they regard the land revenue as their first line of defence and are concentrating all their forces on its protection.

While one can understand the attitude of the Government in this regard, it is surprising that the Legislative Council should, at this stage of the agitation for remission of land revenue, decide to adjourn the discussion of this question to its next meeting. Even more depressing than this decision are the reasons which have been put forward in defence of such action. It has been said by the parties, which voted in favour of a motion for adjournment, that a resolution recommending to Government the desirability of effecting a remission of land revenue in the ryotwari area would "embarrass" the *Government who claim to be still examining the* question and awaiting reports of the collectors on the situation in the districts. This is a palpably halting excuse. In the first place, the Legislative Council has no reason to suppose that a demand for remission based on the unquestionably drastic decline in prices, requires more time for a decision than the Government have already taken. Thanks to the intelligent activity of the lanholders of the province, to which reference has already been made, the merits of this question are no longer under dispute or doubt. And it is up to the Council to ask how the Government could expect it to give them more time in a matter of this kind. It is one thing for the Government to say that during the last two years they have gone into the question thoroughly and that for certain stated reasons they cannot see their way to comply with the popular demand. It is quite another to ask for time when the Council is considering it. Secondly, the Council must remember that resolutions to this effect have been passed more than once before and that a reiteration of the Council's Views in this regard cannot "embarrass" a Government, which is never noted for an open mind in matters affecting popular welfare. Thirdly, when the Council shows such an anxiety to relieve the Government of embarrassment in this regard, it is up to the leaders of the parties to procure from the Government either an assurance that they will view the question more sympathetically than they are known to have done in the past, or at least that the Government would give the Council an opportunity of discussing the question sufficiently in advance of the time when the next payment of *kist* will fall due. There was no sign in the speeches of the council members of any appreciation of their obligations in this regard. Not only did they fail to get such assurances but they tendered their support to the adjournment motion in the face of a provokingly unsympathetic speech from the Finance Member and a statement of calculated non-chalance from Sir Archibald Campbell. The Revenue Member said "We shall consider very carefully the remarks that *have been* made and the suggestions that have been put forward when we have to come to a decision on the reports of the collectors." This leaves no room for doubt that, so far as the Government are concerned, they have made up their mind that the decision in regard to the remission of land revenue will be made without Government giving the Council an opportunity to discuss it on the floor of the House. And as for what that decision would be, the Finance Member has given an unmistakable inkling. As may be expected, he harped on the worn-out string of balancing the budget, without any recognition of the fact that it is expenditure that must balance with revenue and revenue must be dependend upon the ability of the taxpayer to pay.

The results of the working of the gold mines in the Kolar Gold Field area are interesting for the suggestion that the troubles of the gold standard and world finance are the opportunity of the gold mining companies. Though the total quantities of fine gold and fine silver produced in the Kolar Gold Field area, during the year 1932, amounted to 329,574,899 ozs. and 27,781,139 ozs. respectively as against 330,434,024 ozs. and 22,604,850 ozs. during the previous year, the value of the gold and silver showed an increase, due to the high premium on gold. The total value of fine gold and silver produced in 1932 amounted to £1,925,415.13-10 against £1,561,540-18-4.

Indian Finance

MONTHLY REVIEW OF TRADE AND FINANCE

SATURDAY, NOVEMBER 18, 1933.

Though the trade returns of British India for the month of September, 1933 show decreases in value of imports, exports and re-exports as compared with the preceding month India's experiences in the sphere of foreign trade during the first half of the current fiscal year are far from discouraging. The table in the middle of this page no doubt engenders a feeling of pessimism due to the fact that most of the figures relating to September, 1933 compare very unfavourably with the figures for August, 1933 or for September, 1932. And one is apt to rush to the conclusion that we are still in the trough of the depression and are possibly proceeding towards a further decline. It is not perhaps generally known that, according to the author of *World Economic Survey*, the revival that started in the autumn of 1932 and which, strictly speaking, has continued without a break since, though hardly in any spectacular form, originated in India and Australia. And people living in this country feeling the pinch on business and individual life generally, are apt to think that the conclusions of the *Survey* are based on a data and reasoning which have little touch with the realities of economic life in India. To this feeling the table in the middle of next page, which our readers will find is formed on the usual basis, provides a valuable antidote. It will be seen therefrom that in almost every respect, barring of course the staple lines of imports, our trade in the first half of 1933-34 shows the beginning of the upward curve from the nadir to which they have reached in the corresponding period of 1932-33. Our total exports during April Ist, 1933 to September 30 amount to as much as 72.68 crores against 62.20 crores in the corresponding period of the previous year and 78.02 crores in 1931. A similar improvement is not noticeable in the case of imports which show a rise from 65.88 crores in 1931 to 70.80 crores in 1932 and has since fallen to 55.35 crores. Imports of manufactures follow the trend indicated by total imports while food drink and tobacco show a consistent decline from 8.85 crores to 6.71 crores and 5.45 crores in the last three years respectively. Our exports of raw materials during this period is only about a crore less than in 1931 but represent a little more than 50 per cent. increase over the figure of 1932. Manufactured goods have broadly maintained themselves. All through the three years, and if small differences are taken into account, 1932 shows a fall as compared with 1931 and 1933 shows an improvement over 1932 though the loss of the previous year is not made up in full. Food, drink and tobacco, show a consistent decline both in exports and in imports, the fall in the case of imports being more marked than in the case of exports owing largely to the fall in the imports of sugar. The developments under Treasure are so well-known that they need no more than a reference. Against the adverse balance of 121 lakhs in the first six months of 1931-32 we had a favourable balance of 28.35 crores in 1932-33 and 1933-34 shows a small decline to 27.85 crores. But as the balance of trade in merchandise during the first half of the current fiscal year stands at 17.33 crores against an adverse balance of 8.60 crores in 1932, the total visible balance of trade is 45.18 crores against 19.75 crores in 1932, and 19.93 crores in 1931.

But as has been said earlier, the figures for September, 1933 taken by themselves show decreases in the value of imports, exports and re-exports as compared with the preceding months.

The trade returns of British India for the month of September, 1933, as compared with the preceding month, showed decreases in the value of imports, exports and re-exports. The value of imports of private merchandise totalled Rs. 8,75 lakhs, a decrease of Rs. 1,16 lakhs as compared with the preceding month. The exports of Indian produce and manufactures fell by Rs. 2,69 lakhs from Rs. 14,02 lakhs in August, 1933 to Rs. 11,33 lakhs in the month under report. Re-exports also recorded a decrease of Rs. 1 lakh and amounted to Rs. 31 lakhs. The comparison of the trade figures for September, 1933 and the six months, April to September, 1933, with those of the preceding month and the corresponding

*Weekly Average Returns.

periods of the preceding year shows that the improvement is only over the long period. Treasure on private account, showed a net export of Rs. 5,68 lakhs in September, 1933, as against Rs. 4,43 lakhs in the preceding month and Rs. 6.51 lakhs in September, 1932. The import and export figures of gold and silver during the six months, April to September, 1933, compare as follows with the corresponding period of the preceding year.

Measured by the statistics of merchandise and treasure, the total visible balance of trade in September, 1933, was Rs. 8,60 lakhs in favour of India as compared with Rs. 8,92 lakhs in August, 1933 and Rs. 7,73 lakhs in September, 1932. During the six months ending September, 1933, the visible balance of trade in merchandise and treasure was Rs. 45,18 lakhs in favour of India compared with Rs. 19.75 lakhs in the corresponding period of the preceding year. The balance of remittances of funds in September, 1933, was *minus* Rs. 1,06 lakhs and in six months, April to September, 1933, *minus* Rs. 24,765 lakhs.

As compared with September, 1932, the imports of food, drink and tobacco in September, 1933, decreased by Rs. 34 lakhs to Rs. 91 lakhs, those of raw materials by Rs. 37 lakhs to Rs. 1,08 lakhs, and those of manufactured articles by Rs. 1,95 lakhs to Rs. 6.55 lakhs. Under food, drink and tobacco, imports of sugar 16 D. S. and above (including beet) declined from 29,000 tons valued at Rs. 33 lakhs to 21,000 tons valued at Rs. 21 lakhs. The imports of betelnuts declined in quantity from 115,000 cwts. to 106,000 cwts. and in value from Rs. 13 lakhs to Rs. 10 lakhs. Arrivals of raw tobacco fell from 802,000 lbs. valued at Rs. 10 lakhs to 185,000 lbs. valued at Rs. 2 lakhs. Imports of salt declined by 18,000 tons in quantity and by Rs. 3 lakhs in value. Under raw materials, the imports of kerosene oil receded from 4.5 million gallons valued at Rs. 19 lakhs to 3.1 million gallons valued at Rs. 14 lakhs. Imports of fuel oil also fell from 10.5 million gallons to 6.9 million gallons. Imports of lubricating oils amounting to 1.3 million gallons showed an increase of 561,000 gallons in quantity. Imports of petroleum, dangerous flashing below 76°F including petrol, benzene and benzol declined from 1.5 million gallons to 82,000 gallons in quantity and from Rs. 12 lakhs to Rs. 74,000 in value. Imports of coconut oil declined by 118,000 gallons in quantity and by Rs. 3 lakhs in value. Imports of precious stones and pearls unset recorded a decline of Rs. 5 lakhs chiefly due to lesser arrivals of diamonds. Raw cotton (chiefly imported from Kenya Colony and the United States of America) recorded an increase of 340 tons in quantity and of Rs. 3½ lakhs in value. Imports of raw silk fell off by 122,000 lbs. in quantity and by Rs. 4 lakhs in value. Under manufactured articles imports of cotton yarn and manufactures decreased by Rs. 1,45 lakhs. The imports of twist and yarn fell from 4.6 million lbs. to 1.8 mililon lbs. in quantity and from Rs. 38 lakhs to Rs. 16 lakhs in value. Under cotton piecegoods, imports of grey goods fell from 33 million yards valued at Rs. 47 lakhs to 17 million yards valued at Rs. 22 lakhs and those of white and coloured goods from 40 and 49 million yards valued at Rs. 68 lakhs and Rs. 94 lakhs to 15 and 21 million yards valued at Rs. 28 lakhs and Rs. 38 lakhs respectively. Under Iron and Steel there was an improvement of Rs. 3 lakhs due mainly to an increase under sheets and plates. Imports of machinery and mill work recorded an advance of Rs. 29 lakhs due mainly to larger arrivals of sugar machinery. The number of motor cars imported amounted to 773 and that of motor lorries, buses and vans to 322. The value of motor cars imported in September, 1933, amounted to Rs. 13 lakhs and that of motor lorries, buses and vans to Rs. 7 lakhs. The imports of dyes obtained from coal tar rose by 888,000 lbs. in quantity and by Rs. 10 lakhs in value. Other noticeable decreases were under piecegoods of cotton and artificial silk (−Rs. 23 lakhs), silk yarns and manufactures (−Rs. 16 lakhs), woollen manufactures (−Rs. 14 lakhs) and rubber manufactures (−Rs. 9 lakhs).

Compared with September, 1932, exports of food, drink and tobacco in September, 1933, fell by Rs. 77 lakhs to Rs. 3,26 lakhs. Shipments of rice not in the husk, declined in quantity from 144,000 tons to 99,000 tons and the value thereof from Rs. 1,16 lakhs to Rs. 61 lakhs. The exports of tea dropped from 60 million lbs. valued at Rs. 2,45 lakhs to 37 million lbs. valued at Rs. 2,35 lakhs. Shipments of tobacco unmanufactured declined from 1.6 million lbs. valued at Rs. 5 lakhs to 1 million lbs. valued at Rs. 3 lakhs. Exports of coffee fell from 4,600 cwts. (Rs. 3 lakhs) to 350 cwts. (Rs. 18,000). Raw materials and produce exported dropped by Rs. 37 lakhs to Rs. 4,07 lakhs. Under this group raw cotton recorded a decrease of 16,800 in quantity and of Rs. 1,07 lakhs in value. Of the total shipments of 12,400 tons, Italy took 2,300 tons, the United Kingdom 2,000 tons, China 1,600 tons,

Germany 1,500 tons, France 1,300 tons, Belgium 1,200 tons, Spain 700 tons, the Netherlands 500 tons and Greece 400 tons, remainder being despatched mainly to Japan and the United States of America. Consignments of raw jute increased from 48,000 tons to 50,000 tons in quantity but the value fell from Rs. 92 lakhs to Rs. 74 lakhs. Exports of lac decreased by 3,000 cwts. in quantity and by Rs. 2 lakhs in value to 33,200 cwts. valued at Rs. 9 lakhs. Shipments of oilseeds improved from 41,000 tons valued at Rs. 64 lakhs to 114,000 tons valued at Rs. 1,47 lakhs, groundnuts showing an increase from 19,000 tons (Rs. 33 lakhs) to 28,000 tons (Rs. 36 lakhs), linseed from 7,000 tons (Rs. 8 lakhs) to 67,000 tons (Rs. 85 lakhs), and castor seed from 5,000 tons (Rs. 8 lakhs) to 12,000 tons (Rs. 16 lakhs). Exports of raw hides and skins rose by 300 tons in quantity and by Rs. 4 lakhs in value. Exports of manganese ore advanced by 20,000 tons. Shipments of oilcakes fell from 29,000 tons, valued at Rs. 19 lakhs to 21,000 tons, valued at Rs. 12 lakhs. Manufactured goods rose by Rs. 9 lakhs to Rs. 3,90 lakhs. The yardage of gunny cloth exported contracted from 109 millions to 74 millions and in value from Rs. 1,10 lakhs to Rs. 80 lakhs. The number of jute bags shipped advanced from 49 millions valued at Rs. 1,27 lakhs to 57 millions valued at Rs. 1,33 lakhs. Exports of tanned hides and skins rose by 300 tons in quantity and by Rs. 7 lakhs in value. There was an improvement of Rs. 4 lakhs under paraffin wax while cotton manufactures chiefly piecegoods recorded a decline of Rs. 3 lakhs.

The share of the United Kingdom in the imports rose from 35 per cent. in September, 1932, to 39 per cent. in September, 1933, and in exports from 32 to 35 per cent. The shares of Germany, Japan and the United States in the month under report were 9, 15 and 5 per cent. respectively under imports, and 5, 1 and 9 per cent. under exports.

The tonnage of vessels entered into British India and cleared outward with cargoes from and to foreign countries and British Possessions during the month of September, 1933, amounted respectively to 566,000 and 647,000 as against 592,000 and 705,000 in August, 1933, and 560,000 and 587,000 a year ago. During the six months ending September, 1933, the tonnage of vessels entered and cleared with cargoes amounted respectively to 8,490,000 and 3,798,000 as compared with 3,352,000 and 3,499,000 in the corresponding period of the preceding year.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN

POLITICAL OMENS

As clearly pointed out last week, the problem of the tenure of the National Government has begun seriously to exercise the thoughts of the public. Discussing the immediate prospects of giltedged securities, the *Financial News* writes that, judging from their soundness and steadiness for over a year, their future should normally be encouraging. But, it is feared that the risks may well outweigh the possibilities in the near future. This fear has not so much to do with the condition of the money market, nor even with the budget prospects, as with political omens, which have disturbed the giltedge-holder. "The prestige of the National Government in the constituencies is not such as to be looked for a year ago ; and the revival of the socialist party, which is three times more socialistic in its leadership than it was, has developed in a manner that would have been regarded as incredible at any time in 1932. Although it would be fair to say that there are no signs that any serious anxiety is likely to develop, omens are taken to heart, in the City and the wise investor will not overlook the significance of East Fulham entirely".

This view has also found its support in the Labour gains in Municipal elections, throughout England and Wales, except the county of London. Under the present system, a third of the members of each council retires each year. In 1930, Labour lost 76 seats and the Conservative net gain was 100. The present elections, complete results of which are not yet known, already show a net Labour gain of 202 and Conservative loss of 100 ; and the Liberal loss 26. The *Economist* very rightly draws the conclusion that "the Government's economic policy in public finance, whether budgetary or municipal, and in the housing policy, has lost much support in the country. For, the municipal elections of the industrial North are hardly likely to have been inspired to vote for the Labour party by resentment against the Government's India policy, or the obligations incurred by this country under the Locarno Treaty". East Fulham and municipal elections complement each other in giving a warning to the National Government.

Higher Bill rates

The clearing banks came to a united decision, not to buy bills below certain established rates, with the result that they have been able to lift the discount rates by more than ½ per cent. during the past five weeks. Last Friday's tender for the Treasury showed an average rate of discount by 16s. 5.29d, which compared very favourably with the low record of 4s. 9.15d, set up only five weeks previously. In this attitude, the banks were actuated by a desire to push more of their enormous resources, available for day-to-day borrowing.

The rise in Treasury Bill rates will lead to a few additional millions of expenditure on the service of debt. It is argued that it will, otherwise, have no bearing upon trade revival, as the absurdly low rates have not helped it. The mild rise, therefore, is not expected to hamper it. No decline of long-term interest rates need be expected as they are out of touch with short-term rates. The clearing banks propose not to stop at 7/8 per cent. produced, on Thursday, in their minimum buying-rate for Treasury Bills. They hope to raise it still further, until it has reached one per cent. This result was possible because of their concerted action ; and there was no black-legging.

Coal-Pool for Export

On November 2, the Cabinet decided to introduce a short enabling bill, giving the Board of Trade powers to take such action as it thinks fit to provide a sufficiency of coal for export under the new trade treaty. The Board of Trade expected the Central Council of colliery-owners to reach a voluntary agreement, but in vain. Hence, it has planned to call for the statutory allocation of all trade on a percentage basis between each district.

Public mind is also much exercised over the question of improving the prospects of coal trade. Mr. A. E. L. Chorlton M. P. President of the Institution of Mechanical Engineers, discouraged all hopes of employing the workless people, unless new industries were developed. In this connection, Major F. A. Freeth, in his presidential address, laid stress on the importance of producing oil from coal, as the most considerable individual factor in Britain's adverse trade balance was the importation of foreign-produced petrol.

While the Board of Trade is seeking legislation to provide a sufficiency of coal for export under the new trade treaties, the Bacon Marketing Board has committed a folly, the result of which is to exasperate the Danes, who, some six months ago, undertook to take 80 per cent. of their coal imports from the United Kingdom. The Bacon Marketing Board, by fixing the price at 12s. a score for the initial four months, November 1933 to February 1934, has found itself committed to contracts for the supply of pigs, capable of producing bacon at the rate of 3 million cwts. instead of the required 1,750,000 cwts., per annum. On account of the high prices offered, pigs, which would have ordinarily produced mere pork, aspired to yield bacon. Consequently, foreign producers of bacon were abruptly informed to curtail their imports forthwith by 16 per cent. The net result is that England will be taking from Denmark £2,500,000 less of bacon and Denmark's purchasing-power is acordingly reduced.

Lancashire Organises

Major H. A. Procter M. P. for Accrington, has arranged a meeting between the Legislative Council of the United Textile Factory Workers' Association, which represents all the trade unions in the cotton industry and the Lancashire M. P.'s. He feels that the main duty of the Government is to help to recapture Britain's markets. This will necessitate discussion and action to be taken against countries with depreciated currencies. But, his remedies are rather drastic. He believes that it is quite within the ambit of the Government to put a complete embargo upon Japanese goods in our colonial Empire, and to co-operate with our Dominions, so that they should do the same. He will put forward a scheme, however, in the hope that the Government may formulate a better one.

If only as a sign of returning confidence, the scheme, put forward by Lord Melchett, when speaking at the annual luncheon of the Cast Iron Research Association in London on November 1, is significant. He said that he would like to see an Industrial Chamber of Parliament in this country, where industry and the nation would get together and discuss their problems. Even if it were not allowed to put its conclusions into force, it could advise the Government as to what should be done, and so extract the British business from the awful morass of party politics, which was the chief danger to British industry. He declaimed, moreover, that what was done in the laboratory had more profound effect on the economics of the nation, than the machinations of any central bank.

UNITED STATES OF AMERICA

GOVERNMENT GOLD MARKET

Last week, the gold policy of President Roosevelt was adverted to in these columns, under the caption of "Rubber Dollar." It is now abundantly clear that the President has so planned his whole policy, that inflation may be avoided. During the first stage, he raised steadily the price of internal gold. On his own admission, he was disappointed that commodity prices did not respond in the desired manner. The reason appears to be that dealers were particularly careful not to be caught by any sudden reversion of the tendency of the dollar, that might, at any moment, be caused by the expansion of the American gold purchases to the international markets. It was not until a definite announcement of the intention of buying gold abroad was made, that a depreciation of the dollar was registered.

A detailed summary of the monthly bulletin for November, issued by the National City Bank of New York, has, at length, discussed the rationale of President Roosevelt's gold policy :

The question may be asked—how does the purchase of gold by the Reconstruction Finance Corporation at varying prices effect the price level of commodities? The answer is that there is no certainty that it will do so. The problem of the relation between the price of gold and the price of commodities is a complicated one, and the effects of attempting to regulate commodity prices by changing the price of gold are, to a large extent, unpredictable. There is no direct connection between the price paid for an ounce of gold or a bushel of wheat or any other article of use. Commodities are not exchanged for gold, but for money, and money, in our modern economic system, is not gold, but currency and bank deposits. Changing the price of gold, therefore, does nothing to effect the prices of commodities, unless in someway or other the change provides the public with both more money and a desire to spend it. It is true that, if the price of gold is put up, the monetary value of gold reserves will also be increased, and this will enable the banking system to issue more currency and credit, but it will not effect the price of commodities unless the public is in a mood to exploit this added currency and credit-making capacity, and to go out into the markets with it, and buy things. Without this willingness to use an expanded credit and keep money circulating, it will be possible to double, treble and quadruple prices of gold, without effecting the purchasing power of money, which the people have in their pockets or in the banks. It is this problem of getting currency into use that has been the chief difficulty all along, and there has been no question as to the adequacy of the gold supply or the ability of the banking system to turn out all the currency and credit necessary to finance a complete business recovery.

Discussing the difficult problem of price control the bank observes that it is one thing to raise prices and another thing to keep them up, and it is on the question of the Government's policy to accomplish the latter, that the experts will be found especially to disagree. A great difficulty with all attempts to raise prices by currency depreciation is in stopping at just the right point. As long as the dollar is declining, it is quite possible that speculation and productive buying may keep prices moving up. As soon as the dollar stops falling, buyers are likely to drop their holdings, then prices drop, and there is certain to be a renewed demand for inflation to put them up again.

When President Roosevelt hit upon his gold policy as an alternative to a bare-faced inflation, he had the illustrious example of Great Britain before him. The British Exchange Equalisation Fund has bought quite a substantial amount of gold both in New York and in Paris, sometime or other this year. In substance, its operations were similar to those which the Reconstruction Finance Corporation proposes to undertake. From this, we clearly see that there can be no objection on the British side to the American buying of gold in the London market. There is no question, therefore, of a currency war or a depreciation race, nor of any attempt to drive France off the gold standard. What is feared is that the alarmists' exaggeration of the consequences of America's gold policy, especially in France, are likely to do more harm, than the policy itself can possibly do.

But, then, it is also argued that the market in dollars is narrow in London. As the *Financial News* points out, those who base their opinion on the present narrowness of the market in dollar and conclude that a sale of five million dolllars would put up the rate by 50 cents, may be reminded that there is no inherent reason why the market should not widen considerably. Apart from the psychological effect of reaching the old parity of 4.86, which in itself might result in heavy buying, there are innumerable reasons which might cause the market to widen at any moment. There are many people who still believe in the dollar, because the trade balance of the United States is favourable, and because they are convinced that President Roosevelt will not inflate. These people would buy large amounts every time the dollar depreciated by a few points. The fact that the purpose of the selling of dollar is to buy gold is in itself calculated to encourage bulls. The absorptive capacity of the market depends, of course, mainly upon the monetary policy of the United States. If there were signs that President Roosevelt had decided not to beat about the bush, but to inflate properly, buyers would disappear completely. If that happened, there will be no need for any official selling of the dollar to buy gold, as the dollar will depreciate of its own accord.

Under the circumstances, it is a matter for surprise that on October 27, Sir Robert Horne warned against a sterling-dollar depreciation war, which would prompt Great Britain to do something to defend her trade position.

Equally alarming are the reactions abroad. Financial circles in Paris regard Roosevelt's decisions as an attempt to force the remaining gold standard countries off gold by creating insurmountable difficulties. It is, perhaps, true that the Bank of France stands to lose gold through the American operations, even if, as is more than probable, there are no direct American withdrawals from Paris. The net result of the operations will be a depreciation of the dollar, a rise in the London prices of gold, and an outflow of gold from the Bank of France. Notwithstanding this latter result, it would be premature to expect that the operations should become a serious embarrasment to France, as it is evidently contrary to the interests of the United States to drive France off the gold standard. American authorities can be depended upon to apply the brake, in good time.

Next to France, Japan is being somewhat disturbed by Roosevelt's gold scheme. The Japanese Government is studying the possibility of monetary devaluation in the event of Great Britain and the United States deciding to devaluate, but no definite steps are likely just yet. But the possibility of Japan stimulating monetary devaluation has had a gloomy reception in France.

The gold scheme is not an end in itself, but is only a means to an end.. President Roosevelt is said to have indicated that, if the N. R. A. or the Agricultural Adjustment Administration show signs of doing more successfully in the near future,

Air Mail Week

he is quite willing to abandon his attempts at currency management, in which he has little confidence. So, the whole scheme is a mere, though great experiment. Under the circumstances, the vociferousness of the critics is, a bit, out of place.

One group of economists, headed by Professor Kemmerer, considers the proposals unsound, whereas inflationists, headed by Senator Thomas, consider them insufficiently "unsound".

The most dangerous opponent of Roosevelt's proposals is the Republican National Committee, which stands in favour of monetary stability as a means of achieving recovery.

The New York Chamber of Commerce, in an enthusiastic meeting, gave an overwhelming support to a resolution, demanding an immediate return to the gold standard, while a resolution lending support for the President's proposals for restoring the purchasing power of the country was decisively defeated.

A section of the business interests seemed to have found in the President's proposals a target, but as has already been made abundantly clear, the President has no pet passion for any scheme. His one aim is national recovery. If the gold scheme would not achieve what it was intended to do, he will drop it without the least compunction. In that case, he may take resort to the fixing of a varying statutory buying price in dollars for imported gold.

On November 3, the Guarantee Trust Company of New York, acting on behalf of the New York Federal Reserve Bank, purchased gold in France. It is officially announced that the Bank of France and England have been fully informed of the purpose of the Government's gold policy, but the amount of the purchase is not known to the outside public, nor the price at which it was made; and the gold policy remains as secret as before. It is this feature of the President's proposals that is most annoying to his critics. On November 2, the amount of gold on offer in London was £400,000 and the price of $133 3d. included a premium of 1s. 0½d. per ounce. Though there was no evidence of American buying and the whole amount available was thought to have been secured by the usual Continental—Dutch, it was suggested—agencies.

In the absence of any authentic information, regarding the machinery set up for gold purchases abroad, one has to rely upon reports in informed circles. It is said that arrangements have been made with British representatives for a measure of Anglo-American monetary co-operation. Such co-operation will involve the utilisation, by the British Exchange Equalisation Fund, of its dollar balances, to purchase gold in the London market, thus making dollar available. In this way, the administration's objective of keeping the dollar quotation down would be achieved, without any extensive gold purchases by the Reconstruction Finance Corporation. The gold, acquired by the Equalisation Fund, would eventually be turned over to the United States, as a token payment of war debts. On the other hand, Mr. Jesse Jones, the Chairman of the Reconstruction Finance Corporation, has announced that the Federal Reserve Bank of New York is to act as the Government's agent in the purchase of imported gold, in payment for which the bank will offer R.F.C. notes. He further said that the bank would be the Government's sole agent. There is yet a different version of the so-called British-American corporation. On the other side of the Atlantic, it is firmly held that the Bank of England authorities were not even approached on the subject of co-operating in the gold-buying scheme. On the other hand, on this side, it is maintained that a co-operation was declined, and all the bank was prepared to undertake was to remain neutral, so long as the operation did not become embarrassing.

A sorry feature of all criticisms against Roosevelt's proposals is the absurd impatience, almost amounting to contempt of his experiment.

As the *Financial News* points out, there are all sorts of things which might happen, as a result of the steady raising of gold prices. If the R.F.C. would accept a sale of gold on the basis of delivery within ten days being "good", there would probably be a fine traffic in buying gold in Europe for shipment to America, covered by forward sales of dollar. It might drive France off gold; and possibly it might not. Whichever way it finally works out—whether it was confined to dollar devaluation, or whether the gold standard broke altogether under the strain—there remains one common factor, and that is the sudden probability that gold would cease, for a time, to be the conventional medium of safety, and that there would be a marked incursion on the part of speculators and investors (almost in self-defence) into commodities. In fact, if Roosevelt were to proceed sufficiently wildly, the stage would be well a boom. These remarks smack of mild contempt. They do not evince any sense of charity towards a great experiment, for a great Continent, by a great President, at very high risk.

War Debt Negotiations.

The British representative, in New York for the purpose of negotiating the final settlement of war debts, offered 25 per cent. of the total debt, in final settlement, while the Americans asked 75 per cent. But, the dollar depreciation has, for the time being, side-tracked the decision about the war debts settlement. Sir Frederick Leith-Ross, the British representative, ppaid a visit to Mr. Acheson the Under-Secretary in charge of the war debt negotiations; and later, to Mr. Eugene Black, the Governor of the Federal Reserve Board. It is obvious that this latter visit was for the purpose of discussing the relation of war debts to dollar stabilisation. The respective representatives come to an agreement that no final settlement was ppossible, until dollar-sterling stability had been achieved. Mr. Black, Governor of the Federal Reserve Board, seems to have explained the new gold policy. Mr. Dean Acheson said that he expected to see Sir Frederick Leith-Ross regularly for some time after November 2. Mr. Acheson's announcement is, therefore, interpreted as meaning that President Roosevelt is seeking an understanding with Britain, in the hope of securing closer co-operation in his price-raising programme, in return for which he might recommend, to the Congress, a reduction of war debts, on the ground that the benefits, obtained from higher prices, would offset the loss on debts. The postponment of the settlement of war debts has met with the satisfaction of the banking community. It is hoped, however, that the administration will seek an international

agreement of debts and currency early in 1934, provided the present business and prices recession ends.

Recovery Drive

Quite a distorted picture is presented to the public, regarding the unpopularity of the recovery drive, by riots, litigations etc. Riots have broken out in Detroit and Wisconsin farms, which have now joined in the agricultural strike, originating in Nebraska. The N. R. A. is also faced with a suit in the district of Columbia Supreme Court. The G. F. Briscoll Company is working for an injunction to to prevent the Government from refusing to pay—the loans made—for the construction of a post office, on the grounds that the company has signed no code.

But, as one can easily see, these events are trivial, if viewed in their true perspective. As against these comparatively frivolous items of seeming discontent, there are instances, which go to prove that the talent of the country and the mass mind are behind the recovery drive. On October 31st, the N. R. A. received fresh encouragement, in that Mr. Henry Ford has announced that he will supply the figures required, under the Automobile Code in the National Automobile Chamber of Commerce. It is also stated that the Ford Motor Company has provided machinery for the men to voice their grievances.

Further, 20,000 coal miners are being instructed by their Union leaders to return to work in the captive mines, following the acceptance of the "check off" system by the owners. Yet another encouraging event is the abandonment of strike methods by the Wisconsin farms, which has been announced. This is really good news, in view of what critics of the Recovery Drive have boasted, regarding the fears of the anti-black-Leg-riots in this area. Progress is already reported in the copper code, which, it is understood, will contain provision for both the maximum and the minimum prices, as a safeguard for consumers. General Johnson, the Head of the N. R. A., has set out on a tour of the disaffected areas. His reputation has been enhanced by his "Victory" over Mr. Henry Ford, who has now accepted the principle of collective bargaining among his employees.

On the other side, the Government has also become, a wee bit, elastic in their control of the N.R.A. powers. The Swope Plan to transfer the N.R.A. powers to businessmen has met with such support that the Department of Commerce is now taking steps to give local industrial and business associations, powers to enforce the N.R.A. codes, and thus reduce governmental participation. Plans are being worked out for the granting of concessions, by which businessmen will be allowed to fix prices under certain conditions.

Industrial Advisory Board

Five of the most prominent industrialists have resigned from the Industrial Board of the N.R.A., in conformity with the rotation plan. They include Mr. James A. Moffet, who is devoting all his time to the oil code; Mr. Walter T. Tagel, President of of the Standard Oil Company of New Jersey; Mr. Garrard Swope, the electric and wireless leader; and Mr. Louis V. Kirstein, the prominent merchant. Successors have readily been found. The new members are: Mr. Pierre Du Pont, of motor car and armament fame; Mr. Myran C. Taylor, Chairman of the United States Steel Company Corporation; Mr. R. E. Wood, President of Sears Roebuck & Co.; Mr. R. E. Flanders, Vice-President of the American Society of Mechanical Engineers; and Mr. Clay Williams of Reynolds Tobacco Company.

Raising Prices

The authorities in Washington have ever been alert to strengthen the weak links in the recovery chain. When the price of wheat was weakest, the Government stepped in as a buyer of wheat, thereby not only preventing a further decline, but completely reversing the forces of the market and sending prices upward. December wheat soared up from 67½ cents on October 17, to 84¼ cents on October 20, closing at 81½. The proposed government purchase of 40 million bushels of wheat for relief purposes, will further help prices. Though the number of persons, likely to be dependent on such relief, is estimated at 14 millions, this is 6 millions below last year's figure.

Then again, according to a report by the Agricultural Adjustment Department, giving particulars of amounts paid to farmers for live animals on the hog marketing programme, which closed on September 21, approximately to 6,200,000 pigs, weighing between 25 to 100 lbs. and 2,20,000 sows were purchased and slaughtered at various authorised processing points, during the five weeks. The total costs of the programme, including storage and miscellaneous edible and inedible products not yet disposed of, will be 35 million dollars. A large percentage of cash paid for live animals went to farmers in drought-stricken areas.

The figures in the increased money income of factory labour and farmers are also very impressive. The Department of Labour calculates that, in September, industrial payrolls were 64 million dollars greater each week than at the low point of the depression, while the cash income of the farmer is estimated to be 16 per cent. higher than a year ago (including the various bonuses for crop curtailment), despite the drop in farm prices since the middle of July. These increases, however, have been partly offset by reduced purchasing power of money incomes, due to the higher retail prices now ruling.

The levying of heavy processing taxes on foodstuffs already, and more to come later, has given rise to a new type of boot-legging. The Agricultural Act exempts food products, required for the producers' own household, from the processing tax. Now, it has been discovered that some farms were acquiring untaxed flour, asking simply for their own use, and selling it to neighbours and relatives, not of the immediate family. But, the Government has taken energetic steps to check this practice.

Under the cotton loan plan, the Government will lend 10 cents to the pound to cotton-growers selling at about 8½ cents on the farm. In return for this loan, the planter undertakes to reduce his acre-

age by 40 per cent. For the acreage so withdrawn from cotton cultivation, the Government will pay a rental of $3 to $11 per acre (to be paid from the proceeds of the processing tax), depending upon its previous productivity; while, in addition, the planter may utilise the land in a variety of ways, not specifically prohibited by the agreement, and the cotton produced in 1934 on the remaining agricultural land, Government guarantees the parity price, actually about 14 cents. This scheme was widely accepted.

Purchase of Steel Rails

At the outset of the week, the President's scheme for increasing heavy industrial activity by Government-financed purchase of steel rails broke down, on account of the rail-road co-ordinator Mr. Eastman rejecting the offer of the steel company to sell rails at $87.75 per ton, on the ground that the offer reeks of collusion. He offered a price of $85 per ton. He also demanded the right to examine the books on a bidding company, to determine how far a bid was justified. But, the company were not disposed to grant this right. As already pointed out, there is an undercurrent of popularity regarding the Recovery Drive. This was responsible for the settling of the dispute between Roosevelt and the Steel Companies. A compromise has been reached on a price of $36.375 per ton for rails.

Railway purchases of rails at the agreed compromise price are to be financed by the sale to the R.F.C. of company ten-year 4 per cent. notes. No interest will be paid on the notes during the first year, and they are repayable any time during the ten-year period. The agreement regarding rail prices has come none too soon, as the rate of steel activity is 26.1 per cent. of capacity, a decrease of 6 per cent., compared with last week.

R.F.C. Deposit Guarantee Scheme

In these columns the mechanism of financing banks, by the R.F.C., has already been adverted to. Further progress, towards bringing all banks into the movement for raising additional funds before the deposit guarantee scheme comes into effect, has resulted from the sale by the Manufactures Trust Company of 25 million dollars of its capital notes to the R.F.C. Strong banks, such as this, are taking steps, in order that applications for further funds may not be construed as a sign of weakness, and that really weak banks may take the step without attracting discrimination against themselves.

Efforts to liquidate frozen bank deposits are succeeding slowly. The controller has announced that the depositors in the two of the largest closed banks in Detroit will receive 53 million dollars by the middle of the month.

Company earnings for the third quarter have been encouraging, especially in gas and oil lines. Mr. Ickes, the Secretary of the Interior, has asked the oil company for full data in advance of the projected hearings of the oil price fixing schedules. He has requested cost reports from wholesale and retail gasoline concerns to determine the practicability of uniform price fixing. The independent gasoline concerns are vigorously opposing any such plan, on the ground that it would eliminate them and benefit only the large companies.

In retaliation, several large companies in Los Angeles have decided to cut the prices of gasoline by 3 cents per gallon to crush the independents. Simultaneously, the Texas authorities have closed all new wells in East Texas, pending the issue of a proration agreement, which is to form part of the drive to reduce output below the allowable unit.

Commodity prices were firm, by the end of the week. On November 2, in Chicago wheat gained $2\frac{3}{8}$ cents, maize $1\frac{3}{8}$ cents, oats $1\frac{1}{8}$ cents, rye $1\frac{7}{8}$ cents, barely $1\frac{3}{4}$ cents. The stimulation of prices is attributed to the news that the North Pacific Wheat Export Association had begun its programme for subsidising the export of wheat from the Pacific Coast to the Orient.

FRANCE

THE NEW CABINET POLICY.

It is curious that the ministerial crisis, which ended in the fall of the Daladier Ministry, should have had an exhilarating effect on the Bourse. Rentes went up, as did shares of all descriptions, and particularly oil and gold mines. Holders of securities, and those trading in them, breathed a sigh of relief at the disappearance of the threat of fresh taxation, however momentary it may be. Even the franc gained ground fast on dollar and sterling. The French people, as reputed hoarders, have developed a sort of horse-sense, which was responsible for the strengthening of the franc. They argued that President Roosevelt was out to pull, the dollar, down, and that sterling would keep pace with the dollar. They believed, therefore, that francs should be held fast, if one had them. Thus, even a national crisis was helpless to weaken the franc.

In all probability, the Sarraut Ministry would go the way of the Daladier ; but, that is some distance, at any rate, from now. As matters seem at present, the culmination of it will, perhaps, be another Ministry, its fall, a sorrier state of public finances, and the revulsion of public opinion, resulting in a ministry with exceptional powers. In any case, real danger, rather than real talent, is what can help France.

The Bank of Frane's return for the week, ended October 27, has shown that the gold reserves have fallen by the large figure of 154,037,000 francs. Notes in circulation have risen by 160,103,000 francs. In fine, this is the only repercusion of the French political trouble and the country's budgetary difficulties. The people, as a whole, do not seem to be alarmed by President Roosevelt's gold policy, for they believe that it would be dangerous to America, and cannot endanger the franc.

On November 3, the new Cabinet of France made its first appearance before the Chamber of Deputies, when M. Sarraut, Premier, read the ministerial declaration of the Government's policy. It was a general statement, and was not received with warmth. All the same, a vote of confidence was passed by 320 votes to 32. As there were as many as 250 abstentions, the vote does not indicate much. The Premier's declaration revealed the determination of the Cabinet that currency must be backed up by a Treasury with no deficits. The Government would stake its life on the balancing of the budget. New taxation would be as light as possible. But, France would make an effort towards the re-establishment of her commercial balance by not allowing goods to enter the country except in equitable exchange. When the Chamber resumed, a socialist put the

budgetary deficit at 7½ milliards of francs. The Premier, in reply had, however, to say that his policy was that of the last Government, except for some personal ideas of finance. He also added that he respected Civil Servants, but he would make heavy economies by reducing the personnel.

Apart from the Premier's declaration, there are a few fragments which help to arrive at the future financial policy of the Government. In place of M. Lamoureaux, M. Gardey has become the Budget Minister. In two successive recent years, he was Senate Budget Rapporteur. He is better known as a man, who calls a spade, a spade. He stands for sweeping reductions in national expenditure. He is well supported by the inclusion of M. Pietrie in the Cabinet, who is known as the inventor of the *precompte* system (deductions, in advance, for general income-tax, from dividend coupons). It is, therefore, certain that this item in the former Finance Reform Bill will be retained in full vigour, in the present instance also.

For the rest, there is clear evidence that M. Tardieu and M. Flandin, leaders of the Centrist groups, are fully prepared to co-operate with the new Premier. In fact, M. Flandin declared at the congress of the Democratic Alliance Group at St. Etienne, last week, to offer the aid of his followers to form the new ministry's majority, to substitute those on the Left, whose so-called co-operation proved fatal to the three Ministries under M. Herriot, M. Paul Boncour and M. Daladier in quick succession.

Franco-Brazilian Tariff War

The only other item of serious interest is the quick-developing tariff war between France and Brazil. The Brazilian Government engaged Messrs. Rothschild of London to arrange its foreign commercial payments. France took objection, on the ground that sound French money paid in settlement of indebtedness to Brazil was being used to pay other Brazilian creditors than those in France, whose outstanding claims totalled over 200 million francs. On October 21, negotiations proving futile, the French Minister of Commerce imposed a compensatory supertax on certain categories of Brazilian imports entering France. On October 25, the Brazilian Government imposed reprisals, in the shape of tariff rates, two and a half times greater than those, hitherto in force. On October 31, the French

Government revised its decree, only to the worse, by imposing on Brazilian imports into France a surtax, equivalent to double the duties inscribed in the general tariffs, independent of existing rates, and on products hitherto entering free a sur-tax of 100 per cent. *ad valorem*. In this connection, it is well worth mentioning that Brazilian imports into France in 1932 were over 500 million francs, while Brazilian purchases of French products were 120 million francs only. It is clear, therefore, that the course, adopted by the Brazilian Government, is sheer folly.

ITALY

CORPORATIVE MOVEMENT.

The economic effort of Italy has enlisted the sympathies of foreigners, by the very moderation of the methods pursued. In fact, there is great discrepancy between her enthusiasm for a new ideal and her great wisdom, in being content with the slow and gradual application of the official doctrine. Another healthy feature is that the Government has shown a readiness to compromise, when its theory conflicts with practical requirements and to display an opportunism, rather very disappointing to the idealist of the Corporative Movement. The movement aims at the establishment of a system of trade guilds or "Corporations", as organs of the State. The fundamental idea behind it is that the nation exists, because of productive effort. Realising the value of productive effort, the State essays to discipline it for the benefit of the public. Under this system, individual, uneconomic undertakings are eliminated, and their gradual liquidation ensured. The remaining economical potential undertakings are carefully organised. All national forces are co-ordinated and disciplined, with a view to increasing the trade of the country, and developing export markets, in readiness for the much-hoped-for World Economic revival.

Strikes and lock-outs are taboo, and machinery is set up for settling labour disputes and handling the unemployment question. The cost of this innovation is offset by the absence of less "disciplinary" schemes of economic reconstruction, of the loss by strikes and lock-outs, and of expensive and non-productive unemployment relief. The nation inherited a heavy load of industrial losses from the past, seriously threatening the banking situation. But, the incidence of those losses was spread over so broad a basis and their liquidation over so long a period, that the shock to the economic stability of the country was wellnigh averted. This achievement went a long way in restoring confidence, not only in the country, but among foreigners also.

The only disconcerting aspect of the national life is the growing deficit in the State accounts. The debt, incurred therefor, is consolidated, in part. The remainder, nearly 8½ milliard lire at the end of April 1933, is a floating debt. Signor Jung, in his budget speech, stated that the floating debt was, in the main, financed by interest-bearing postal bonds. By this arrangement, a short-term speculative devise was avoided, and, really, a capital investment of the national savings was induced. Regarding the consolidated portion of the debt, he assured that the Government would not proceed to any form of forced conversion.

Strength of the Currency

In refreshing contrast with richer countries, Italy has stuck to the gold standard, and intends to continue to do so. This result was achieved by discountenancing loans abroad. To-day, the foreign debt of Italy (apart, of course, from war debts) is only about $80,000,000. The loans abroad, by Municipal and one or two industrial concerns, do not amount to more than about $200,000,000. Very few lire are held abroad, privately. The sale of national currencies is strictly governed by bonafide business transactions. The state of countries, with large foreign investments, helped the public to withhold any export of lire.

Adverse Balance Shrinking

For 1932, the total balance was reduced to lire 1,446,210,797 on a total trade turnover of lire 15,068,663,119, as compared with an average adverse balance of lire 5,393,177,105 on a total average turnover of lire 34,347,226,877 for the year 1926-31. During the first six months of the current year, this movement was continued, imports being lire 3,919 millions and exports lire 3,126 millions and yielding an adverse trade balance of lire 793 million and compared with the adverse trade balance of lire, 1,257 millions, resulting from lire 4,726 millions on imports and lire 3,469 millions of exports during the corresponding months of 1932. The Italian is confident that the nation will turn the corner, much sooner than later, as he is fully conscious that the adverse trade balance is being gradually reduced, while Signor Mussolini has devoted his personal attention to improving the "tourist" industry, a source of Italy's "invisible export" revenue.

GERMANY

THE REICHSBANK POLICY

Since the Reichsbank statute was amended a week ago, Dr. Schacht, the President, speaking on

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

OVER 86 YEARS' SERVICE IN INDIA

The STANDARD LIFE ASSURANCE COMPANY
ESTABLISHED 1825

Head Office: 3, George Street, Edinburgh. 46, Queen Victoria St., E.C. 4. London: 4, Pall Mall, S. W. 1.

HEAD OFFICE FOR INDIA:
Standrad Buildings, 32, Dalhousie Square, Calcutta.

October 29 to the German-Swedish Society, stated that the Reichsmark was better guaranteed against inflation than any other currency. Though the Reichsbank had largely financed public works for the provision of employment, there is an influential section of public opinion that it could give far more active support to the policy of state-aided recovery. This section also desires large reductions in taxation, solely for the purpose of lowering the costs of production. It argues that national finances would lose nothing in the long run, and during the transition period, the Reichsbank should assist in budget. But, Dr. Schacht was uncompromising in his disapproval of this policy, and he told the Reichsbank general meeting that any direct advance by the Reichsbank to the Reich or any other public body was quite out of the question, even at some future date.

It is believed that the Reichsbank will soon support buying in the open market, and that such a state will contribute to a lowering of the general level of interest-rates. This view is founded on the freedom, the Reichsbank derived by the amendment of its statute, allowing it to carry out open market operations on a large scale. But, Dr. Schacht has warned the speculators, who have got giltedged securities in expectation of future purchase by the Reichsbank in support of loans, that the Reichsbank was not there to safeguard speculative winnings on the stock exchange.

The Reichsmark scrip of the Konversionskasse has at long last been made available to foreign holders of German bonds. The British bondholders have a grouse against the German Government, on the matter of agreements with the Swiss and Dutch creditors. But, their only hope for fair treatment lies in any possibility, that there may be, of the British Government taking action in their favour. The British creditors' committee has formerly applied to the Government for help, and the Government is interested. The concerned Government departments, namely, the Treasury, the Foreign Office and the Board of Trade, have all been watching the matter closely. The big holders, such as banks, insurance companies etc., have, however, preferred to wait. They hope that they may share in the very generous commission, allowed to the privileged banking houses, placed in charge of the collection. For collection work, 5 per cent. is to be allowed on the actual amount received. But, there is the possibility of dividing this between the banks, who present the scrip for collection and those who actually collect them. This is so palpably unfair to the bondholders, that it is to be hoped that the banks in question will give the holders the benefit of at least four-fifths of the commission, they receive.

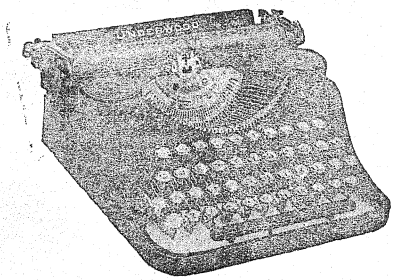
The Swiss and German Press have severely criticised the adverse attitude of the British bondholders and the British Press towards the German Government's agreement with the Swiss and Dutch creditors. The *Neue Zurcher Zeitung* of Switzerland, which has risen to the rank of a most important daily newspaper printed in the German language, since the muzzling of the German Press, has attacked the *Financial News* which characterised the aforesaid agreement as "fraudulent preference," through Dr. H. W. Egli, its London correspondent. The German paper, while admitting the objection to the fulfilment of obligations being made the object of bartering for special trade concessions, pleaded that that was no novelty in the present hard times. By way of illustration, it referred to the new treaty between Great Britain and the Argentine, by which, in consideration for the maintenance of good marketing facilities in England, the Argentine Government did not only agree to the unfreezing of peso balances by a bond issued in sterling, but actually put a considerable cash sum down for immediate payment to small creditors in Britain. That payment was, in effect, made at the expense of the creditors of other nations. The *Financial News* retorted by saying that it was not in the least disposed to condone "fraudulent preference", because it could be urged that there had recently been other contraventions of a similar kind. Besides, it defended the Anglo-Argentine agreement on the score of the Argentine Government being free to appropriate the proceeds of her sterling sales for her foreign debt service in any country whatsoever.

NOW !

You Can Afford

THIS PORTABLE TYPEWRITER

A FULL-FLEDGED PORTABLE IN EVERYTHING BUT PRICE



The newest member of the Underwood Portable Family. A genuine writing machine at the lowest priee ever listed for a complete typewriter ! Features available only in portable typewriters costing much more ! Standard keyboard—42 keys writing 84 characters. . both capital and small letters . . shift lock . standard line spacer . . paper and earriage release levers . . shift key . . quiet key and carriage action . . nickel plated metal parts . . lustrous black crinkle finish.

THE NEW UNDERWOOD JUNIOR PORTABLE

Price: Rs. 145/- only Net.

For particulars apply to:—**BLACKWOOD BLACKWOOD & CO.**

POST BOX. No. 120. CALCUTTA.

SURRENDER, PAID-UP-POLICY, & LOAN VALUES:—II

[*The first article on this subject appeared in the issue of November 1, 1933.*]

It has been shown in the previous article on this subject that it is necessary for life offices, which charge a level premium throughout, to accumulate reserves out of past premiums in order to meet future claims. It was also stated that the cash payment, by way of return out of this reserve, allowed to those policyholders who may be unable or unwilling to continue payment of premium, is called a surrender value. It is the combined reserves of all policies that make up the life fund of an office. This important reserve fund is the backbone of the level premium plan. State regulations are made in almost all the countries to safeguard it as a trust fund and to prevent its misuse, as it will be needed in the future to pay claims. The states require all insurance companies to file periodical reports with a responsible and eminently qualified public official so that he can inspect these reports and see whether the company is being safely operated or not. A company which has a sufficient reserve so that supplemented with all the future premiums, it will be able to meet all the future claims, is said to be solvent. This valuation of the assets and liabilities of the companies by a qualified actuary is under the state laws, to be made at periodical intervals not exceeding five years. The possession of this reserve fund makes life insurance companies important factors in the financial world. The combined total life funds of all the companies in a country will amount to such a huge sum that it is but quite natural that insurance business exerts considerable financial influence in most of the developed countries.

I have digressed too much in stating the importance of the Life Fund. Life insurance companies do not generally follow any hard and fast rule in determining the scale of cash surrender values that may be allowed on the surrender of policies. On the other hand there is a very wide divergence in the scale of values offered by various companies in this country and even in United Kingdom. Though the actuarial or technical principles involved in calculating these cash values is the same, yet different companies view this subject of cash surrender values in different attitudes and hence this divergence. Further the surrender values offered by one company cannot be compared with those of another company on similar policies, for there are other factors which affect the reserve and consequently the surrender value of a policy. An important factor affecting the size of the reserve of a policy is the rate of interest assumed by the company in the calculation of its level premiums. If it assumes a high rate of interest, the premium rates will be low for the accumulated high interest will make up the difference required for life assurance protection. Thus the higher the rate of interest assumed, the lower will be the premium and the lower the premium the lower will be the reserve as the amount of reserve depends upon the actual amount of premiums received. Consequently all other conditions remaining the same, the cash surrender value of an office which has assumed a higher rate of interest than another, will be smaller than that of the other. This difference in interest assumptions is usually lost sight of in making comparisons between the reserves, surrender values and loan values of different companies.

Now I shall deal with some of the elementary principles involved in the calculation of cash surrender values. As stated before the cash surrender value at any time bears a close relationship to the reserve of a policy at that time. It was also stated that the reserve represents the maximum amount of cash value that may be paid to the policyholder in fairness and equity. But usually a small portion of this reserve is deducted during the early years of the policy on three grounds, namely, (1) the loss of profits which the company may obtain through this policy, (2) the expenses incidental to the surrendering of the policy, (3) the assumed loss of a good life and the resulting adverse mortality selection. The cash surernder value of a policy can easily be calculated if the reserve of the policy is known and thus the calculation of the surrender values reduces to the calculation of reserves. There are several ways of calculating the total reserve of all the policies of a life office. The principles involved in the calculation of the total reserve is exactly the same as that involved in the calculation of the reserve of an individual policy. But as it is easier to understand the former, I give below one or two methods of calculating the total reserve. The most common and widely used method of finding out the total reserves is known as the Prospective Method. Under this method a specific mortality table and an expected rate of interest is assumed and with these bases of calculation the present value of all future death claims is estimated. And from this sum is deducted the present value of all future premiums, the result being known as the Prospective Reserve. Thus the Reserve is that amount, which if added to the present value of all future premium payments will equal to the present value of all future death claims. It is equal to the present value of future death claims minus the present value of future premiums.

Another method of calculating the total reserve known as "Retrospective Method" looks at the Reserve as surplus premiums collected and accumulated. Since the reserve is found by looking back over the results of the past it is so called. It is calculated by merely finding out the past premiums collected plus interest thereon and subtract from that the past death claims. This resulting amount should be the actual amount in hand. In this method if the premiums are small or if the claims experienced is large, the reserves would become inadequate and smaller than that found by the other method. The prospective and the retrospective reserves will coincide if the actual experience in the mortality and interest rate, is the same as the expected mortality and interest rate. The prospective method is decidedly superior to the retrospective method in that it stipulates the sum required to meet future conditions regardless of what has happened. The Reserve values of individual policies are calculated on the same principles and there are numerous tables published by experts giving the reserves of various kinds of policies, at different ages of entry and for different durations of the policies. Whenever a policyholder applies for a quotation of surrender value, these tables are consulted, the corresponding reserve found and the surrender value quoted after the necessary deductions depending upon the practice of the particular office. It may be noted in this connection that though the actual surrender of policies may be small, life offices may receive a large number of applications for quotation of surrender values. So it is essential that they should adopt a simple, correct and quick method of calculating the surrender values.

Another method of calculating the surrender value has been formulated by Dr. A. E. Sprague, the famous actuary. Here the value of the paid-up-policy is first calculated and from this the surrender value is derived. The formulae derived by Dr. Sprague for finding out the paid-up-policy value of a whole life policy of 1 issued at age x, after the

lapse of n years is P.V. $= 1 - \frac{P'x+1}{P'x+n}$ where $P'x+1$ is the office premium for a Whole Life Policy of 1 issued at age $x+1$ and $P'x+n$ is the office premium for a whole life assurance of 1 issued at age $x+n$. Supposing the life assured to be in good health at his age $x+n$, he can secure a whole life policy of 1 then, by paying an annual premium of P'x+n but he has already been paying a premium of P'x only. So this premium of $P'x$ will secure a new whole life policy of $\frac{P'x}{P'x+n}$ at the present rate. Since the policyholder is going to discontinue payment of further premiums, a sum equal to the sum assured which he can then obtain for his old premium should be deducted from the original sum assured of 1, to obtain the paid-up-policy that may be granted to him. For the reserve under the old policy should secure, theoretically a paid-up-policy for $1 - \frac{P'x}{P'x+n}$ The premium at age $x+1$ ($P'x+1$) is taken because of the fact that the first premium is almost exhausted in the initial heavy expenses. After thus finding the paid-up-policy value it is easy to calculate the surrender value. The paid-up-policy is virtually a well secured absolute reversion free from estate duty and expenses of realisation and so its present value (which will be the surrender value) can be calculated by assuming the proper mortality table and interest rate. For whole life limited payment policies and endowment assurances a similar general procedure can be followed but in these cases a much simpler and easier method is usually applied by Life offices. Hrere the paid-up-policy value granted bears the same ratio to the total sum assured as the number of annual premiums actually paid bear to the total annual premiums payable under the policy. Surrender values of these policies can then be calculated by finding the present value of the reversion.

Before concluding this article I wish to point out to the readers the enormous extent to which the granting of high guaranteed surrender values has developed in U. S. A. and Canada and the consequent "disastrous run" experienced by American life offices recently. In this connection it may be noted that state regulations in the principal countries of the American continent, *viz.* U. S. A., Canada, Argentine, Brazil, Chile, Peru etc. compel all life assurance companies to insert in their policies a schedule showing in each year the actual amounts the company will pay to the insured on the surrender of the policy. The regulations do not fix any particular scale of values but the natural effect of this enactment is that life insurance companies have begun to offer higher and higher scale of cash values in order to make their policies attractive from the selling point of view. In the earlier years of the existence of life assurance, non-payment of premiums within the grace period meant that all rights under the policy were forfeited and that nothing was payable thereafter. It is only later during the development of life insurance business that surrender values and paid-up-policies were granted. But the tendency of recent years particularly in U. S. A. and Canada has been the opposite of the early days of life assurance and in their rivalry and competition for more and more business, the companies of these countries have sought to outdo each other in the liberality of their surrender values. While there can be no denying the fact that the grant of surrender value is not only a privilege but a right of the policyholder, the use of this right should be confined only to cases of absolute necessity. The guaranteeing of high surrender values leads too often to unnecesary forfeitures with the consequent loss of protection. By so doing the very purpose of life assurance is spoiled. The general high rate of lapse and surrender prevalent in U. S. A. and Canada is mostly due to this vice. Nearly one third to one fourth of the total business secured is thus lost every year.

During the recent depression years, the demand for surrender values and policy loans has grown at such an alarming rate that almost all the states of U. S. A. passed a moratorium on surrender value and loan payments. The recent widespread fear of the Banking system of U. S. A. followed by the forced nation wide closing of all the banks, left the Insurance Companies as the only institutions on whom demands for cash could be made. Consequently there was a very heavy demand for cash on account of cash surrender values, and policy loans. And this developed in a few days into a "run" and forced the passing of emergency legislation by the States, prohibiting the companies from paying more than $100 on account of surrender or loan. The moratorium however did not apply to payments on death claims, maturities or annuities. This unprecedented demand for surrender values was due not only to the financial crisis and panic that prevailed then in U. S. A., but also to the fact that life offices there were paying abnormally high surrender values. It may even be said that the policyholders were made to realise that they do not lose much by surrendering their policies at any time.

This is indeed a dangerous position which was not at all realised by the companies until the above mentioned "run" occurred. There is no doubt that liberal guaranteed surrender values are an attractive selling feature in a life policy but when this feature is emphasised and made so attractive as to impair the security behind the policy, then it becomes a menace rather than an advantage. It is on account of this guaranteeing of high surrender values that people in North America are so heavily insured. Since they are given the impression that they can get back the money which they have paid as premiums without much loss, at any time when an emergency occurs to them, they have begun to put all their savings in life assurance. An eminent Canadian actuary Mr. Arthur Pedoe writes as follows, about the causes of the high rate of surrenders experienced by the North American Companies "The main reason for such a heavy termination ratio is the high guaranteed cash values paid on surrender. If a policyholder knows that he can withdraw from his contract at little, if any, loss to himself, the main incentive to keeping it in force is gone. The cash value looks attractive and he is easily persuaded to effect new assurance under a brand new plan just like turning in an automobile for a new model. The loss due to paying a higher premium is overlooked and the surrender value of the terminated policy, possibly representing the acumulation of years, may be frittered away and the very aim and purpose of life assurance destroyed."

Speaking on the way in which American companies and their responsible executives think about this problem he further says, "The right of the policyholder to a cash surrender value, even a liberal one, cannot be denied. But who would maintain that a policyholder should be able to withdraw, on surrender of his policy, more than he has paid in premiums with accumulated interest less the necessary expense charges? This is the case with a number of companies and I have even heard it defended by a prominent American life assurance executive on the grounds that the expense at which a life assurance company does its business is no concern of the policyholder! I have also heard it stated, in all seriousness, that just as the premium charged includes an allowance for a return on death greater than the reserve, so you can assume that the premium contains a charge for the net amount the company has been able to accumulate. With such views held by responsible executives, what can be expected of the others connected with life assurance?" Anyhow recent events in U. S. A. have created a stir and sensation in the Insurance world, and life offices in U. S. A. and Canada have now realised the danger involved in the guaranteeing of high cash surrender and loan values and they are now determined to do something definite to remedy the position.

STATISTICAL INFORMATION

FOREIGN TRADE OF KARACHI

The statistics of the foreign trade of the port of Karachi for October, 1932, issued by the Collector of Customs show that the total value of imports (merchandise) amounted to Rs. 1.33 crores, an increase of Rs. 9 lakhs and that of exports to Rs. 74 lakhs, a decrease of Rs. 9 lakhs as compared with the figures for October, 1932. The progressive totals for the seven months ending October, 1933, show a decrease of Rs. 2.53 crores, or 25 per cent. under imports, but an increase of Rs. 85 lakhs or 15 per cent. under exports.

Comparative figures of the principal imports and exports for October, 1932 and 1933, are given below:—

Imports.

	In Oct., 1933	
	Quantity	Value
Machinery and millwork ...	...	19,89,964
Oils	...	15,96,046
Metals and ores ...	...	7,90,885
Liquors	...	3,69,985
Vehicles	...	3,41,764
Cotton manufactures ...	...	18,93,347
Woollen goods ...	...	12,71,077
Sugar	6,686	6,77,519
Cotton twist and yarn ...	...	5,922

The increase in imports of machinery was due mainly to larger arrivals of sugar machinery from the United Kingdom, the Netherlands and Belgium. The improvement under oils occurred in receipts of kerosene oil from Russia, fuel oils from Persia and Roumania and other mineral oils from Roumania. Imports of metals increased as the result of larger arrivals of hoops and strips and galvanised sheets from the United Kingdom and Belgium. Imports of cotton manufactures, on the other hand, showed a decrease which occurred in receipts of white and coloured goods. Imports of white goods amounted to 4¼ million yards value at Rs. 8 lakhs as against 10¾ million yards valued at Rs. 17 lakhs, while those of coloured goods totalled 3¾ million yards valued at Rs. 7 lakhs as against 4¾ million yards valued at Rs. 11 lakhs in October, 1932. Imports of grey goods at about 1 million yards valued at Rs. 1 lakh showed an increase of 233,000 yards in quantity and Rs. 5,000 in value. The total imports of cotton piecegoods during the seven months ending October, 1933, amounted to 94¼ million yards valued at Rs. 1.56 crores, showing a decrease of 49 per cent. in quantity and 53 per cent. in value as compared with the corresponding period last year. The share of the United Kingdom in the total imports of cotton piecegoods during the seven months ending October, 1933, was 71 million yards valued at Rs. 1.23 crores, a decrease of 48 per cent. in quantity and 50 per cent. in value, while that of Japan was 22¾ million yards valued at Rs. 31 lakhs, a decrease of 47 per cent. in quantity and 54 per cent. in value as compared with imports in the corresponding period of 1932-33. The decrease in imports of woollen goods during the month under report was due to reduced arrivals of piecegoods from France and Czechoslovakia and yarn and knitting wool from Poland and France. Imports of sugar decreased as the result of smaller arrivals from Java. Beet sugar was, however, received in larger quantities. The total imports of sugar during the seven months ending October, 1933, aggregated 38,332 tons as against 53,899 tons in the corresponding period last year.

Exports.

Cotton, raw	4,360	20,11,531
Wheat flour	373	37,529
Rapeseed	8,993	9,98,260
Barley	11	704
Wool, raw (Indian and foreign) ...	2,475	18,90,092
Skins, raw	418	4,11,635
Hides, raw	121	69,623
Wheat	69	5,924

The decrease under cotton was largely due to Japan having made no purchases during the month under report as against 2,382 tons valued at Rs. 13 lakhs purchased in October, 1932. The United Kingdom, Germany and France also took less. The total quantity of Indian cotton exported during the seven months ending October, 1933, was 78,139 tons (437,579 bales) as against 50,348 tons (281,946 bales) in the corresponding period last year. Exports of wool, on the other hand, showed an increase which occurred mainly in shipments to the United Kingdom and partly in shipments to the United States of America. Increased purchases of goat skins by the United States of America accounted for the improvement in exports of raw skins. Of the total quantity (viz., 8,993 tons) of rapeseed exported during the month, the principal amounts went to the United Kingdom (2,459 tons), Italy (1,475 tons), France (1,235 tons), Germany (1,650 tons), Belgium (875 tons) and the Netherlands (900 tons).

TRADE OF ALLEPPEY

The figures of export trade from Alleppey port for the quarter ending with the 30th September, 1933, show once more a tendency towards a decline in most of the articles (says our correspondent). The quantity of yarn exported in 1932 was 68,900 cwts. which during the corresponding period of 1933 dwindled to 39,837 cwts. Every country has imported remarkably smaller quantities. There is a slight increase as regards matting which has risen from 14,20,696 yards to 16,79,417 yards. The United Kingdom, America, New Zealand and Karachi have imported more than last year, as also Belgium, Holland, Denmark and Malta and China, while Australia, Africa, Persia and Turkey have had to curtail their imports to a substantial extent. The total quantity of mats exported has also shrunk from 36,016 to 32,805 cwts. The exports to Karachi, Burma, Denmark and the United Kingdom have exceeded last year's figures, while Africa, America, Australia and New Zealand have shown a distinct downward tendency. The heavy fall in tea continues, the actual quantity exported being 1,57,218 lb. in 1932 as against 32,072 lb. in 1933. There has been no export to Bombay at all. The United Kingdom imported only 1,995 lb. in 1933 as against 1,21,398 lb. last year. There seems to be a good demand for rubber as is seen from the fact that 88,824 lb. left the shores of Alleppey in 1933 when compared with only 15,000 lb. last year. Ceylon was the only country which indented for Travancore rubber. No rubber was imported by either Calcutta or Bombay which last year got 2,500 lb. and 5,000 lb. Pepper trade seems stationary with 17,650 cwts. as against 17,266 cwts. last year. The largest export was to Calcutta; Bombay and Karachi come next with almost the same quantity each. Ginger seems to have been less in demand and the quantity sent out was shared by Calcutta, Bombay and Karachi. There was appreciable decline in copra from 36,886 cwts. to 31,018 cwts., Bombay claiming 25,100 cwts. as against 32,463 cwts. last year. Karachi also went in for a larger quantity than last year, i.e., 5,918 cwts. as against 4,141 cwts. The number of cocoanuts exported fell from 11,60,480 to 9,50,130, this decline is noticeable both in Bombay and Karachi, because the former got only 9,39,250 as against 9,87,795 last year while the corresponding figures for the latter port are remarkably striking, viz., 19,880 and 1,72,685. As regards fish and prawns the total quantity exported was only nearly half, i.e., 5,504 cwts. as against 9,940 cwts., the biggest customer being Burma. Though Ceylon imported 2,034 cwts. of prawn skins and fish manures last year, there was no export at all this year. As usual America alone consumed the whole of the cashew nuts exported, i.e., 3,935 cwts. this year and 3,978 cwts. last year. Neither monozite nor ilmenite was sent this year, but America took in this year 200 cwts of zircon.

TRADE OF ADEN

The number of merchant vessels over 200 tons that used the Port of Aden in September, 1933, was 107 as compared with 108 in the corresponding month last year and the total tonnage was 441,000 as compared with 459,000.

Excluding coal, salt, fuel oil and Military and Naval stores and transhipment cargo, the total tonnage of imports in the month was 7,000 and of exports 4,500 as compared with 6,700 and 4,200, respectively, for the corresponding month last year.

The total value of imports excluding Government stores was Rs. 38,17,000 as compared with Rs. 42,06,000 for September, 1932, and of exports Rs. 26,08,000 as compared with Rs. 27,44,000.

The total value of both imports and exports together was Rs. 64,25,000 as compared with Rs. 69,50,000 for the corresponding month last year.

Imports during the month were above those for September, 1932, in the case of coffee, grain, pulse and flour, gums and resins, hardware, hides raw, seeds, skins raw, piece-goods white, tobacco manufactured and treasure private; and below in the case of sugar, piece-goods grey, and printed or dyed, twist and yarn and tobacco unmanufactured.

Exports were above those for September, 1932, in the case of grain, pulse and flour, gums and resins, hardware, seeds, skins raw, sugar, piece-goods white, printed or dyed, twist and yarn and treasure private; and below in the case of coffee, hides raw, piece-goods grey and tobacco unmanufactured and manufactured.

TRADE OF PORT OKHA.

The total import of merchandise at Port Okha during October, 1933, amounted to 772 tons valued Rs. 1,98,010, consisting of 54 tons G.C. and G.P. Sheets valued Rs. 10,296, 80 tons bleaching powder valued Rs. 7,252 and machinery, etc., Rs. 1,80,462. The total export during the same period amounted to 3,124 tons, consisting of 2,575 tons cement, 350 tons seeds, 199 tons magnesium, etc. The number of vessels that entered the port was 6.

The total import during the corresponding period amounted to 4,682 tons valued Rs. 4,96,757, consisting of 500 tons sugar valued Rs. 50,180, 135 tons G.C. and G.P. Sheets valued Rs. 20,658, 2,963 tons coal valued Rs. 53,334 and

machinery, etc., valued Rs. 72,585. The total export during the same period amounted to 4,851 tons, consisting of 4,541 tons cement and 310 tons seeds, etc. The number of vessels that entered the port was 14.

RAILWAY EARNINGS.

The total approximate gross earnings of all State-owned Railways for the week ending 28th October, 1933 (30th week), amount to Rs. 154 lakhs, Rs. 12 lakhs *more* than the figures for the last week and Rs. 5 lakhs *more* than the figures for the corresponding week of the previous year and Rs. 2 lakhs *more* than the corresponding week of 1931-32.

The total approximate gross earnings from 1st April to 28th October, 1933, amount to Rs. 46.63 crores or Rs. 73 lakhs *more* than the figures for the corresponding period of the previous year and Rs. 15 lakhs *less* than the corresponding period of 1931-32.

A comparison with the figures of the previous week for the principal State-owned Railways shows *increases* in the approximate gross earnings of all railways. A comparison with the figures of the corresponding week of 1932 shows *increases* in the approximate gross earnings of all the principal State-owned Railways except the E. I., G.I.P., M. & S. M. and Tirhoot and Lucknow-Bareilly.

During the week ending 28th October, 1933, there were loaded on the broad gauge 67,192 wagons, being 920 *more* than in the corresponding week of the previous year, or an increase of 1.39 per cent. On the metre gauge there were loaded 43,472 wagons, being 5,544 *more* than in the corresponding week of the previous year, or an increase of 14.6 per cent.

For the period from 1st April to 28th October, 1933, there were loaded on the broad gauge 2,114,481 wagons, being 130,931 *more* than in the corresponding period of the previous year or, an increase of 6.60 per cent., and on the metre gauge 1,343,132 wagons, being 136,411 *more* than in the corresponding period of the previous year, or an increase of 11.3 per cent.

The following are the approximate ordinary working expenses including suspense but excluding appropriation to and from depreciation fund of the State owned Railways from 1st April to 31st August, 1933, as compared with the actuals of the corresponding period of last year.

MINING STATISTICS.

According to the report of the Chief Inspector of Mines the daily average number of persons working during the year ending 31st December 1932, in and about the mines regulated by the Indian Mines Act was 204,658, as compared with 230,782 in the previous year. The decrease was 26,124 persons, or 11.32 per cent. Of these persons 110,907 worked underground, 41,017 in open workings and 52,734 on the surface. The numbers of men and women, respectively, who worked underground, in open workings and on the surface were as follows:—

	Men.		Women.	
	1932.	1931.	1932.	1931.
Underground ...	96,196	98,885	14,711	16,841
In open workings ...	30,256	38,833	10,761	16,079
Surface	39,899	45,157	12,835	14,987
Total ...	166,351	182,875	38,307	47,907

An Engineering Plant fully equipped to undertake all classes of Railway works, General Engineering works and Machinery Manufactures, is for sale as a going concern. Full particulars on application to Box No. 10, C/o. "Indian Finance".

The number of women employed underground was 14,711 or 13.26 per cent. of the total number of men and women employed underground. The percentage of women employed underground in coal mines was 14.84 per cent., as compared with 16.81 per cent. in 1931, 18.39 per cent. in 1930, 23 per cent. in 1929 and 29 per cent. in 1928. The provincial distribution of the women who worked underground was as follows:—

Province.	Number of women employed underground. In coal mines.	In salt mines.	Total.
Bengal	5,060	...	5,060
Bihar and Orissa ...	8,827	...	8,827
Central Provinces ...	696	...	696
Punjab	...	128	128
Total ...	14,583	128	14,711 in 1932

as compared with 16,841 in 1931.

The number of persons employed in coal mines was 148,489, which is 9,778 less than the number employed in 1931. Of these persons, 45,659 were males employed in cutting coal, 16,582 were males employed as loaders of coal and 26,847 were women.

According to Dr. Penman (Chief Inspector of Mines in India) there was a decrease of more than 74.63 per cent. in the output of manganese ore in India during 1932, the figures of production being 88,119 tons, valued at Rs. 5,35,347, as compared with 347,373 tons in 1931. The average reported value per ton of manganese ore produced fell from Rs. 7.36 in 1931 to Rs. 6.07 in 1932. The corresponding value in 1930 was Rs. 14.64. The position of the manganese industry grew steadily worse during the year and 1932 was the worst year that the manganese industry in the Central Provinces has experienced for many years.

The quantity of mica consigned in India in 1932 was 32,644 cwt., valued at Rs. 14,31,901, as compared with 38,863 cwt., in 1931. The decrease was 16 per cent. The output of dressed mica in 1932 was 36,557 cwt., as compared with 46,177 cwt., in 1931.

The quantities of mica and splittings shipped in 1931 and 1932 are as follows:—

	Cwt.	Rs.
1931	33,244	31,37,492
1932	31,518	26,55,578

There was, therefore, a reduction of 8.12 per cent. in quantity and 16.4 per cent. in the value.

The production of iron ore in India during 1932 was 673,434 tons, valued at Rs. 15,64,504, as compared with 590,176 tons in 1931.

During 1932 at mines regulated by the Indian Mines Act, 1923, there were 163 fatal accidents which is 26 less than in 1931 and 48 less than the average number in the preceding five years.

Bawdwin Mine.—During the month of October, 38,310 tons of ore were mined. 33,600 tons of ore were milled in the Treatment Plant producing 13,485 tons of Leady Concentrates.

13,827 tons of Lead-bearing material, including 221 tons of High Grade Ore, were smelted in the Blast Furnaces, producing 7,267 tons Hard Lead for treatment in the Refinery.

Refinery Products were:—

5,880 tons Refined Lead.
470,627 ounces Refined Silver.

Experimental Zinc Plant produced 5,403 tons Zinc Concentrates, assaying 9.2 ounces of Silver, 5.9 per cent. Zinc.

In addition to the above 800 tons Copper Matte were produced from the treatment of accumulated smelter by-products and 6,294 tons Copper Ore.

100 tons of Refined Antimonial Lead and 300 tons Speiss were also produced.

Included in the tonnage of Refined Lead is 244 tons recovered from the smelting of Copper Ore.

Extracts from Directors' Report:

Report—For the year ending 30th June, 1933.

The Company's net profits for the year ending 30th June, 1933, after deducting all working expenditure and setting aside Depreciation at Rs. 9 lakhs on the Company's properties and works, amount to Rs. 13,09,027-4-11, which, with the sum brought forward from last year's accounts Rs. 1,61,272-8-9 and the sum of Rs. 1,50,000 transferred from General Reserve Fund to the Profit and Loss Account, makes a total of Rs. 16,20,299-13-8. From this sum of Rs. 16,20,299-13-8 the Directors have made the following appropriations:—Paid ad-interim dividend on Preference Shares at 7½ per cent. per annum for nine months ended 30th June, 1932, Rs. 4,58,268-12, written off loss on Investments Rs. 46,198-3-2, written off 1/10th of the total amount of brokerage, commission and expenses re loan from The Tata Hydro-Electric Power Supply Company, Limited, Rs. 77,815-7-6, written off Stores (for obsolescence and deterioration) Rs. 37,293-15-6, written off Tools (for deterioration) Rs. 20,301-7-9, equal to Rs. 6,39,877-13-11, leaving available for distribution Rs. 9,80,421-15-9. Out of this sum the Directors recommend the following distributions for the year ending 30th June, 1933:—A Dividend on Preference Shares at 7½ per cent. per annum for the year ending 30th June, 1933 (subject to deduction of Income-tax) Rs. 6,11,025, a Dividend on Ordinary Shares at Rs. 10 per share, free of Income-tax, Rs. 2,78,990, Bonus to the Company's permanent staff Rs. 15,000 equal to Rs. 9,05,015; after making these payments there will remain a balance of Rs. 75,406-15-9, which the Directors recommend be carried forward.

General.—The Profit and Loss Account shows that the result of the year's operations, compared with that of the preceding year, was as follows:—

Revenue from Power Sales, 1932-33 Rs. 55,13,755-12-7, 1931-32 Rs. 57,00,966-4; Revenue from other sources, 1932-33 Rs. 2,51,010-8-3, 1931-32 Rs. 2,47,720-14-6; total Gross Revenue, 1932-33 Rs. 57,64,766-4-10, 1931-32 Rs. 59,48,687-2-6; all charges, including debenture interest and Rs. 9,00,000 for Depreciation, 1932-33 Rs. 44,55,738-15-11, 1931-32 Rs. 46,03,127-5-9; Net Profit, 1932-33 Rs. 13,09,027-4-11 1931-32 Rs. 13,45,559-12-9.

The decrease in revenue from power sales is mainly due to a reduction, for the third consecutive year, in railway consumption.

The decrease in expenses is due to a decrease in debenture interest. For the year under report, there is a charge of Rs. 30,970, which is a cash discount for prompt payment allowed from 1st February, 1933, to textile consumers on standard contract. There was no corresponding charge in the preceding year. The decrease in debenture interest as compared with the preceding year is about Rs. 1,65,000. And this item will show a further substantial reduction in the current financial year.

As a result of the scheme of modification put through during the year under report by The Tata Hydro-Electric Power Supply Company, Limited, in respect of its 8 per cent. debentures, the loan from the Hydro Company has been reduced to the round figure of Rs. 1,00,00,000 repayable in one sum on 1st April, 1941, and the annual payments to the Hydro Company in respect of redemption by drawing have been eliminated. The Company has handed over to the Hydro Company for cancellation debentures of the Hydro Company of the nominal value of Rs. 7,32,400. A new inter-company agreement has been entered into under which the interest payable to the Hydro Company from 1st April, 1933, has been reduced from 8 per cent. on the amount borrowed plus 1½ per cent. on Hydro's proportion of the outstanding loan to 6 per cent. on the amount borrowed plus ½ per cent. on Hydro's proportion.

In connection with the reduction of interest from 8 per cent. to 6 per cent. on the Hydro debentures, a cash bonus of Rs. 6 per debenture was paid in respect of the total issue of Rs. 1,50,00,000 still remaining outstanding; and this cash bonus was paid by the two companies in the proportion of ⅔rds by this Company and ⅓rd by The Tata Hydro-Electric Power Supply Company, Limited.

Further, The Tata Hydro-Electric Power Supply Company, Limited, at the request of this Company and with the approval of its own Debenture-holders, released and handed over to this Company £236,800 of this Company's "B" Debenture-stock, being the amount still outstanding of £250,000 originally pledged with and held by the Trustees of the "C" Debenture Trust Deed and of the Debenture Trust Deed of The Tata Hydro-Electric Power Supply Company, Limited. The £236,800 of "B" Debentrue-stock so released has now been cancelled.

The Company's share capital is now fixed, there being left no share outstanding on the Register on which any call or calls remain unpaid.

The Directors are recommending the payment of a bonus to the permanent staff and request for that purpose an amount of Rs. 15,000 from this Company to be apportioned at the discretion of the Managing Agents to the joint and individual staffs of the Hydro-Electric Companies in service at the end of the year under report.

The current monsoon has been satisfactory. It broke on 21st June and the storage reservoir at Mulshi was already full and overflowing before the end of that month.

The Generating and Receiving Stations and the Transmission Lines have been maintained in good order and have given satisfactory service. But tests have determined that the transformers in the Receiving Station at Dharavi were in an unsatisfactory condition and would require replacement of their cores.

A comparison of the sale of power and revenue from power sales of the last five years is given herewith:

	Power Sold. Units.	Revenue. Rs.
1928-29 ...	109,735,843	44,10,903
1929-30 ...	139,153,876	55,13,985
1930-31 ...	140,179,501	54,96,118
1931-32 ...	144,580,706	67,00,966
1932-33 ...	138,793,256	55,13,755

Extracts from Directors' Report:

Report—For the year ending 30th June, 1933.

The Company's net profits for the year ending 30th June, 1933, after setting aside Rs. 9 lakhs as General Depreciation on the Company's Works and Properties and allow the usual percentage on Dam Depreciation Amortization Fund, amount to Rs. 22,98,599-10-10, which, with the sum brought forward from the last year's accounts, namely, Rs. 4,52,936-8-5, makes a total of Rs. 27,51,536-3-3.

From this sum of Rs. 27,51,536-3-3 the Directors have made the following appropriations:—Paid ad-interim dividend on Preference Shares at 7 per cent. per annum, and on Ordinary Shares at Rs. 30 per share, free of income-tax, for the half-year ended 31st December, 1932, Rs. 6,51,210, written off expenses *re* 6 per cent. (1941-45) Debenture Loan of Rs. 1,25,00,000, Rs. 22,234-12-9, written off Stores (for obsolescence and deterioration) Rs. 58,009-5-2, written off Tools (for deterioration). Rs. 6,738-7-0, set aside as Reserve for Bad and Doubtful Debts Rs. 4,50,000, set aside as Reserve for Special Repairs Rs. 2,10,009-1-5, set aside as Reserve Discount and Exchange Rs. 2,426-1-1, total Rs. 14,00,628-1-5, leaving available for distribution Rs. 13,50,908-1-10. Out of this sum the Directors recommend the following distributions:—(a) A dividend on Preference Shares at 7 per cent. per annum for the half-year ending 30th June, 1933 (subject to deduction of Income-tax) Rs. 1,72,620, (b) A final Dividend on Ordinary Shares at the rate of Rs. 45 per share (free of Income-tax) Rs. 7,17,885, (c) Bonus of the Company's permanent Staff Rs. 38,000, total Rs. 9,28,505. After making these payments there will remain the balance of Rs. 4,22,403-1-10, which the Directors recommend be carried forward.

General.—The Profit and Loss Account shows that the result of the year's operations, compared with that of the preceding year, was as follows:—

	1932-33. Rs.	A.	P.	1931-32. Rs.	A.	P.
Revenue from Power Sales	60,55,160	2	9	62,30,687	8	8
Revenue from other sources	42,484	4	4	15,649	3	0
Total gross revenue ...	60,97,644	7	1	62,46,336	11	8
All charges including Debenture Interest and Rs. 9,15,827 for depreciation	37,99,044	12	3	40,01,079	14	7
Net Profit ...	22,98,599	10	10	22,45,256	13	1

The decrease in revenue from power sales is due to a reduction of more than 5 million units in electrical energy sold.

The increase in revenue from other sources is due to a profit on the sale of Government Securities purchased during the year under report as temporary investments.

Included in the charges for the year under report is an item of Rs. 1,19,688-6-10 being the amount of cash discount for prompt payment allowed from 1st February, 1933, to textile consumers on standard contract. In spite of this new charge, the total of all charges shows a reduction of over Rs. 2,00,000, mainly due to a reduction in interest on notes and debentures. There will be a further substantial reduction on this account during the current financial year.

During the year under report, the Company's new issue of 6 per cent. debentures (1941-45) of the nominal aggregate value of Rs. 1,25,00,000 which was referred to in the last Annual Report was successfully marketed and from the proceeds of these debentures, supplemented by the other resources of the Company, the 7½ per cent. 10-year sterling notes of the nominal value of £1,000,000 and the balance of the 8 per cent. 5-year loan notes which matured for repayment during the year were paid off and retired.

In connection with the retirement of the sterling notes, your Directors are able to report a substantial profit on exchange account which was taken directly to Reserve for Discount and Exchange, and by the appropriation of only Rs. 2,426-1-1 from the profits of the current year, it has been possible to write off in full not only the amount of Rs. 14,25,000 standing in the preceding accounts as Discount and Commission *re*: Sterling Loan of £1, 000,000, but also the discount of Rs. 6,25,000 on the new 6 per cent. Debenture Loan of Rs. 125 lakhs.

An amount of Rs. 4,50,000 has been appropriated to Reserve for Bad and Doubtful Debts and from that Reserve an amount of Rs. 5,00,000 has been written off during the year against probable losses in connection with The Kundley Power Company's debenture redemption.

The Directors are recommending the payment of a bonus to the permanent staff and request you to appropriate for the purpose an amount of Rs. 38,000 from this Company to be apportioned at the discretion of the Managing Agents to the joint and individual staffs of the Hydro-Electric Companies in service at the end of the year under report.

With reference to the cementation of the main dam at Thokerwadi, the Directors beg to report that a good beginning has been made, the work is proceeding at a satisfactory rate, and it is hoped to complete the operation prior to the issue of the next annual report. The Directors have set aside from the year's profits a sum of Rs. 2,10,009-7-5 towards the further prosecution of the work, a portion of which however is properly chargeable to Capital Account.

The current monsoon has been satisfactory and the storage reservoir is now full.

The physical properties have been maintained in good order and the plant has given satisfactory service during the year.

A comparison of the sale of power and revenue from power sales for the last five years is given herewith :—

	Power Sold. Units.	Revenue. Rs.
1928-29 ...	114,001,399	48,69,721
1929-30 ...	136,588,111	55,44,158
1930-31 ...	133,803,354	53,55,710
1931-32 ...	160,000,000	62,30,687
1932-33 ...	154,390,753	60,55,166

—N. B. SAKLATVALA, CHAIRMAN.

ALBION JUTE MILLS CO., LD.

Capital ...	7,48,240	Block (net) ...	5,06,007
Debts ...	71,732	Stores ...	44,033
Profit & Loss ...	28,884	Outstandings ...	40,148
		Cash & Invests. ...	2,58,668
Total ...	8,48,856	Total ...	8,48,856

Extracts from Directors' Report :

Report for the half-year eded 31st August, 1933.

The working for the half-year shows a gross profit of Rs. 59,394-11-9, to which has to be added :—The amount brought forward from last half-year Rs. 10,851-6-3, making a total of Rs. 70,246-2. After providing for :—Depreciation Rs. 18,517-1-10, Reserve for Taxation and Commission Rs. 12,846,-4, Special Depreciation on Development Rs. 9,999, total Rs. 41,362-5-10, there remains a balance of Rs. 28,883-12-2, which we recommend should be dealt with as follows :—In payment, on application, of a dividend at the rate of 5 per cent. per annum, free of income-tax Rs. 18,706, leaving to be carried forward Rs. 10,177-12-2.

Output.—Raisings for the half-year compare with the two previous half-years as follows :—

Half-year ended 31st August,	1933	13,303 tons.
,, ,, 28th February,	1933	14,654 ,,
,, ,, 31st August,	1932	20,509 ,,

Briquetting Plant.—Owing to considerable delay in shipment of this plant from England the installation has not yet been completed.

The plant should be producing by the end of the current year.

Meanwhile, chiefly on account of the prevalent low prices of Bengal coal, there is no improvement in demand for Assam Coal.—Shaw Wallace & Co., Managing Agents.

PENCH VALLEY COAL CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	5,25,000	Block (net) ...	3,50,004

Debts ...	1,85,454	Stores ...	31,107
Profit & Loss ...	83,884	Outstandings ...	1,48,740
		Cash & Invests. ...	5,17,523
Total ...	10,49,338	Total ...	10,49,338

Extracts from Directors' Report:

Report for the half-year ended 31st August, 1933.

The working for the half-year shows a gross profit of Rs. 1,24,047-6-5, to which has to be added the amount brought forward from last half-year Rs. 17,779-15-1, dividends on investments Rs. 6,875, equal to Rs. 24,654-15-1, making a total of Rs. 1,48,702-5-6. After providing for depreciation Rs. 21,766-8-3, reserve for Taxation and Manager's Commission Rs. 23,052-4, amount placed to General Reserve Rs. 20,000, total Rs. 64,818-12-3, there remains a balance of Rs. 83,883-9-3, which we recommend should be dealt with as follows:—In payment, on application, of a dividend at the rate of 25 per cent. per annum, free of Income-tax, Rs. 65,625, leaving to be carried forward Rs. 18,258-9-3.

Output of Steam Coal for the half-year compares with the three preceding half-years as follows:—

	Barkui. Tons.	Chandametta. Tons.	Total. Tons.
August, 1933 ...	30,189	39,250	69,439
February, 1933 ...	30,439	44,062	74,501
August, 1932 ...	29,203	33,881	63,084
February, 1932 ...	26,935	30,971	57,906

Sales.—During the period under review, work at both collieries has been restricted to actual requirements.

Working and Development.—The workings at Chandametta Colliery have extended considerably and a new fan of increased capacity has been installed to provide the necessary ventilation.—Shaw Wallace & Co., Managing Agents.

FRENCH MOTOR CAR CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	24,00,000	Block ...	7,10,103
Reserves ...	2,48,826	Stock-in-trade ...	12,02,865
Debts ...	3,45,271	Goods-in-transit ...	84,824
		Outstandings ...	5,62,992
		Cash & Deposits ...	2,03,053
		Profit & Loss ...	2,30,258
Total ...	29,94,097	Total ...	29,94,097

Extracts from Directors' Report:

Report for the year ended 31st March, 1933.

After providing for depreciation and writing off Bad Debts, and providing a further sum of Rs. 3,000 for depreciation on Accessories and Spare Parts stock, and Rs. 500 to Reserve for Bad and Doubtful Debts, there is a debit balance in Profit and Loss Account of Rs. 87,576-1-5. To this must be added the balance of Rs. 1,42,681-9-6 agreegating in all Rs 2,30,257-10-11 which it is proposed to carry forward.

In view of the difficulties experienced in collecting outstandings the Directors have considered it advisable to transfer Rs. 50,000 from General Reserve to Reserve for Bad and Doubtful Debts, making an aggregate Reserve of Rs. 80,203-12-7.

That the depression in business generally has detrimentally affected this Company for the past three years, is reflected in the figures in the present balance sheet. During the year many further economies were effected.

Mr. M. Sevadjian and Mr. R. Le Franc, being out of India, do not sign the Report and Balance Sheet.—O. M. Jatia, A. E. Mitchell, W. M. Craddock, C. H. Shelton, Directors.

NATIONAL CO., LD.

Total ...	66,15,289	Total ...	66,15,289

Extracts from Director's Report:

Report for the half-year ended 31st October, 1933, shows a nett profit of Rs. 2,52,296-14-3.

After making sundry adjustments, there is a balance at credit of Profit and Loss Account of Rs. 2,74,465-4-4. The Directors recommend dividends on Preference Shares at Rs. 3-8 per share Rs. 17,500, and on Ordinary Shares at 10 annas per share Rs. 2,18,750, the balance Rs. 38,215-4-4 to be carried forward.

In accordance with the agreement of the Indian Jute Mills Association, the mills have worked 40 hours per week with 15 per cent. of the total looms silent.

Mr. Gobind Lall Bangur, being absent from Calcutta has not signed the Report and Accounts.—O. M. Jatia, David Ezra, D. Wilson, Directors.

BELAPUR CO., LD.

Synopsis of Balance Sheet:-

Liabilities.	Rs.	Assets.	Rs.
Capital ...	18,79,900	Block (net) ...	16,78,802
Reserves ...	10,74,839	Crop in progress	5,90,136
Debts ...	2,89,007	Stores & Spares ...	1,11,718
Profit & Loss ...	9,50,059	Outsandings ...	20,162
		Cash & Invests. ...	17,97,992
Total ...	41,93,805	Total ...	41,93,805

Extracts from Directors' Report:

Report for the year ended 30th September, 1933, shows a nett Profit—after charging Rs. 1,17,540-1-10 for Depreciation—of Rs. 9,28,464-12-3, which sum, together with the balance brought forward from the last year's Profit and Loss Account of Rs. 21,594-9-9, leaves a balance of Rs. 9,50,059-6, which the Directors propose to dispose of as follows:—Dividend of Rs. 9 per share, free of income-tax, on the shares of the Company Rs. 3,38,382, provision for income and super tax Rs. 1,50,000, transfer to Reserve Fund Rs. 3,25,000, provision for future extension Rs. 1,00,000, donation to Staff Provident Fund Rs. 9,600, total Rs. 9,22,982, balance to be carried forward to the next year Rs. 27,077-6.

As will be seen form the Belance Sheet, the Reserve created for income and super tax remains practically untouched. This is owing to the final assessment not having yet been made, as negotiations in regard to the Company's taxable Profits have been going on since the last Report was issued.

The Season, from an Estate point of view, though not so good as the previous year, was satisfactory, both in regard to field yield and sugar content. This important side of the Company's operations is being carefully watched, and experimental work on new Canes had irrigation problems is being proceeded with.

The Factory worked well throughout the year, and though we were not able to reach the high figures of the previous Season, we were able to maintain the record in India for recovery. During the close season the whole of the Plant has been overhauled, and three new Calandrias, a new Spray Cooling Plant, etc., being part of the new extension, have been installed. Orders for the further machinery required so as to enable the extensions to be finished during the next close season will be placed in the near future, and to meet this expenditure the Directors have decided to set aside out of this year's Profits a further sum of Rs. 1 lac.

Since the last Report was issued, arrangements for the leasing of some further 1,100 acres of land have been entered into.

During the year a new Hospital, complete in every respect—with two Wards—has been built and opened for the benefit of the Company's employees and their dependents, and is much appreciated.

In recognition of the good work done by the staff during the year, the Directors recommend that one extra month's salary be given to the permanent staff, and that same be credited to their respective Provident Fund Accounts.

The sugar manufactured by the Company has once more been well received and maintained the high reputation which it has in the market as a pure swadeshi sugar. The whole of the output of the past year has been sold and delivered, and prices realised, however, being lower than last season.

The expansion of the Indian Sugar Industry continues to take place and several new factories will commence operation in the Deccan in the near future. It is likely, therefore, that prices will be regulated from now onwards more by internal competition than by the rates quoted for imported sugars.

The new season's cane under growth on the 30th September, 1933, was 2,686 acres 32 gunthas. The crop appears to be in an excellent state and with normal conditions should cut out well.

Sir Lalubhai Samaldas, Kt., Sir Purshottamdas Thakurdas, Kt., and Mr. Laljee Naranjee, being absent from Bombay, have not signed the Report and Statement of Accounts.—Joseph Kay (Chairman), Kikabhai Premchand, R. D. Warren-Smith, D. Moir, Directors. W. H. Brady & Co., Ld., Managers.

WORLD OF INDIAN FINANCE

Calcutta, November, 24.

Money has been easy so far as the interbank call and short notice deposits are concerned. ½ to ¾ per cent. is the quotable rate, borrowers not evincing any interest worth mentioning. There are, however, reasonable grounds to believe that a steadier phase of money may be witnessed in the near, if not immediate, future. For one thing, the Government have not purchased any sterling from the market for a number of weeks, which means that there has been no release of funds to banking circles from this source. During most of the weeks up to the end of October, the market used to be in receipt, on an average, of Rs. 1½ crores from the Treasury against its sales of sterling. The flow from this source has now been dammed ; and all current indications are that it will continue to remain dammed for some time. For another thing, there has certainly been a transfer of funds from India to London on a fair scale partly on account of speculators who were gambling on a change in the ratio and mostly on account of those who would have to remit their savings sometime or other to England and who thought that rather than take the risk of a drop in exchange, it would be better to send away their monies with as little delay as possible. We also understand that, in connection with a large estate, a large parcel of Rupee giltedge securities was sold and the proceeds remitted Home. All these factors combined would certainly result in a diminution of surplus resources in financial circles. We should, therefore, look forward to somewhat steadier conditions in the money market in the latter half of December at the latest.

It is also obvious that the Treasury Bills policy of the Government is now being planned with a view to induce and emphasise firmer monetary conditions. The process of increasing the yield on three months Bills has been going on for nearly two months. Till recently, the average discount rate on accepted tenders used to mount up at the rate of two annas per cent. per week. In the current week, the rise was no less than six and a half annas. There have also been repeated increases in the amount of Treasury Bills on offer on the tender day. The amount was increased from Rs. 1½ crores to Rs. 2 crores and it is now raised to Rs. 2½ crores. We cannot believe that the expansion in the amount on offer is connected only with the ways and means position of the Treasury. Taking these repeated increases in the weekly amount on offer in conjunction with the rapid rise in the average discount rate, we have to infer that the aim of the Government is to "ginger up" the rupee-rate. From 1s. 6 1/16d., it has been a headlong decline to 1s. 5 13/16d. Last Saturday ; exchange was actually quoted at 1s. 5¾d., in Bombay. It was even apprehended that there would be a demand for Reverse Councils. After a deterioration so sharp and complete and after the dangerous decline of exchange to so near the vicinity of the point at which the Government will have to sell Reverse Councils, it is natural that the authorities feel that something ought to be done for imparting strength and steadiness to the rupee-rate. It is evidently their intention that the Treasury Bills operations must be used as a handy device in this behalf. From this point of view, we shall not be surprised if the average discount on accepted tenders mounts up even more sharply in the future till the level of 3 per cent. is reached. Not till the attainment of 3 per cent. discount would exchange banks find it worth the while to bring in funds from London for investment in Rupee Treasury Bills. Only when sales of T.T. in respect of such operations take place, can exchange really feel any steadying influence. We are, therefore, led to the conclusion that the Government will be willing to force the pace of Treasury Bills yield in a way to induce and stimulate the investment of foreign funds in Rupee Bills. But it is extremely doubtful if the Government will be quite successful in their objective under the present circumstances. Bankers are so scared of quoting forward that business on any large scale would be found to be extremely difficult.

In any case, in consonence with the increasing yield on Treasury Bills, bankers have been willing to bid for term deposits at higher rates. Three months money finds takers at 1½ per cent. We understand that the rate will be put up to 1¾ per cent. from tomorrow.

If our interpretation of the Treasury Bills policy be correct; that is, if the aim and object of the authorities is to lever up exchange through monetary firmness, there would not be, for sometime, a halt in this process of increasing yield on short-term Bills. We have emphasised, on frequent occasions, that during a period of ascending yields on Treasury Bills, bankers invest in them with reluctance; and that during a period of descending yields, bankers invest anticipating their future requirements. To the extent that till 3 per cent. or a rate slightly higher is attained, the Government will go on increasing the average discount on accepted tenders week after week,—realisations from sales of intermediates would not be as much as would otherwise be the case. A market which has invested as much as Rs. 3 crores in three months Bills when the yield was roundabout one per cent. is putting out a bare Rs. ½ crore to Rs. 1 crore when so attractive an yield as 3 per cent. and over is offered. Only when the market knows that the Government have cried a halt would it be willing to take its full quota of intermediate Treasuries. From the point of view of the ways and means position, no substantial relief can be expected except to the extent that the weekly amount roped in by tenders is larger.

In pursuance of the same policy, we will not be surprised if the Government have recourse to contraction of currency. It was only six weeks ago that we anticipated that there may be an expansion of currency by the transfer of surplus sterling securities from the Home Treasury to the London Branch of the Paper Currency Reserve. All hopes of such expansion are now doomed. On the other hand, we may have to be prepared for contraction. Contraction under the present circumstances would certainly embarrass the Government's ways and means position in India but it is exchange, and not the ways and means position, which has always engaged the supreme attention of the Government. It is also possible that as a result of such contraction, the cash position of the Imperial Bank is affected in a way that would necessitate a rise in the Bank rate. Unless exchange shows an appreciable improvement in the coming weeks, we are in for a phase of dear money policy through official operations.

In the course of the debate on the ratification of the Silver Agreement arrived at at the World Economic Conference, Sir George Schuster put in a strong plea justifying the Government's policy of selling silver in the past six years. This has been good business, declared the Finance Member. He continued:

> "In 1926 the Government of India held in the Currency Reserve ninety-one crores of silver rupees; they now held 104 crores. Fifty crores in that time had been sold, out of which India had realised £16,750,000. The average price realised was 20 1/5 pence per standard ounce but, taking into account the enhanced value of gold they bought with part of the proceeds, the average price was as much as 27 pence. There India had earned or saved £2,750,000 in interest on the silver sold."

While we have not been against sales of silver by the Government, and while, so far as we are concerned, this special pleading of the Finance Member was not necessary, there are one or two points in his speech on which we should record our divergence. It is good that the Government have sold Rs. 50 crores (nominal value) of silver. It is also good that the sale proceeds amounted to £16.75 million. It is equally satisfactory that the average price realised was 20 1/5 pence per standard ounce. Up to this portion of the argument, we have no quarrel with Sir George. But when he goes on to argue that part of the proceeds of the sale of silver was used for the purchase of gold and that the enhanced value of gold so bought should be taken into account in assessing the average price at which silver was sold, we regret to have to say that Sir George is putting forward a fantastic claim. It is not a fact that even one pound of the sale proceeds from silver was utilised for the purchase of gold. It is not a fact that the Government were, of their own accord and on their own initiative, buyers of gold at any time after the purchase of £2.15 million of gold immediately on the publication of the Hilton-Young Currency Commission Report. It is true that during 1930-31 and 1931-32, the currency reserves did show an increase of gold holdings. In March, 1931, 972,260 tolas of gold worth Rs. 1.90 crores was received by the Currency Department. During 1932-33, gold of the total value of Rs. 7.29 crores was received. All the gold that thus reached the currency reserve was due not to any deliberate policy of the Government to buy gold but to the inevitable flow that was induced by the prevalent economic distress in the country. The Government did not buy any gold in the open market. They had perforce to accept all the distress gold that was tendered to them. The sale of silver was in pursuance of a deliberate policy. Such purchase of gold as was made was in spite of the Government. If any thanks are due for the gold thus received, we should thank the masses of this country who, in extreme distress, had no alternative than to sell whatever gold they could put their hands on. And if anyone is to be congratulated on the profit that has accrued on the gold so purchased, it is not our Finance Member who, to the last, stood wedded to 1s. 6d. gold. Congratulations are to be tendered to the world conditions which swept England off the gold standard and which, thereby, conferred a benefit on India. The Finance Membtr has no hesitation in taking, and appropriating for himself, the credit for this purchase of gold and for the profit on this gold. The total amount of gold that was thus added to the currency reserve was about Rs. 9 crores or nearly £6¾ million. If Sir George had invested all the £16 1/14 million in gold, what would be the profit that India would have made? The profit that India would have derived would be nearly £7 million. It is now claimed that India has "earned or saved £2.75 million in interest on the silver sold." On the other hand, India has lost £4¼ million because of the negligence or unwillingness on the part of our authorities to invest all the silver sale proceeds in gold. And it is time that Sir George appreciates that there is a strong feeling in the country that no opportunity should be missed for strengthening the gold stocks in our Reserve. Though, in our view, we are nearly at the fag-end of the gold exports, an active policy of gold purchases even at this stage would be acclaimed by the country as a gesture of the identity of the Government with national interests.

Exchange has been steady enough but very sensitive and touchy. There has been not very much business either way. Bombay continues to exert a depressing influence on this market. The Western Capital was a buyer for ready T. T. at 1s. 5 27/32d. Business was reported yesterday at 1s. 5 53/64d. The rupee-rate in Bombay is still lower than in Calcutta. Clive Street bankers have obtained most of their cover in Bombay.

The closing rates are: 1s. 5 27/32d., available for November T.T.; 1s. 5 13/16d., December-January 15 T.T.; 1s. 5 15-32d., January 15 March T.T.; and 1s. 5⅝d. T.T. for April onwards.

Bills may be quoted: 1s. 5 15/16d., up to January; 1s. 5 59/64d., February; 1s. 5 29/32d., March-April; and 1s. 5 7/8d., onwards.

Money was easy during the week. Call money quoted ⅜ per cent. Onemonth and twomonth deposits quoted 1¼ per cent. and threemonths 1½ per cent.

,, 21 ...	5.36⅜	83.37	127s. 0d.	$33.76
,, 22 ...	5.41	83.65	126s. 6d.	...

Another important week in international finance. Besides the rapid fall in the dollar from 5.27½ on November 17 to 5.41 and the rise in the sterling-franc rate from 82.46 to 83.65, there have been such important developments as the demand in Great Britain that the pound must be allowed to follow the dollar, the large-scale efflux of gold from the Bank of France, the resignation from the American Administration of important officials like Mr. Woodin, Secretary of the Treasury, Mr. Acheson, Under-Secretary, and Dr. Sprague, Economic Adviser to the President. The price at which the American Administration is prepared to buy newly mined gold has also gone up from 33.56 to 33.76 dollars.

Taking the above significant trends in the order in which they have been mentioned, it is necessary in the first place, to note that the change in the international exchanges, to which attention was drawn last week in these columns, has continued in an even more perceptible form during the present. While the dollar has weakened further against sterling, sterling has shown increasing strength in relation to the franc. It is not clear what are the circumstances of international finance to-day which can adequately explain the rise in the sterling-franc rate from 81.15 a fortnight ago to 83.65 at the time of writing. Doubtless, the attraction of the London market as the only haven of safety for foreign monies has continued in large measure. It is reported that during the week ended November 9, 730 million gold francs left the vaults of the Bank; but of this only a very small quantity is on account of American purchases; and the information has also been afforded that the bulk of this amount has been bought by the British Exchange Equalisation Fund with a view to curb the rise in sterling. Though the rise during the week under review has been very much more marked than during the week, to which the above report refers, there is little yet heard of any large scale operations by the Exchange Equalisation Fund in behalf of a low value of sterling. There can be no doubt that a level of 83.65 for the sterling-franc rate is one, at which British statesmen and publicists cannot but feel some degree of concern for the position and prospects of the British export trades. At the rate at which the cross-rate has been rising, Britishers might well envisage the possibility of the dollar falling to over 6 dollars to the pound; and at a time when Britain has begun to feel that she is well on the way to being out of the wood, the repercussions of a 6 dollar rate on British trade are none too happy to contemplate.

There is no reason to believe that the dollar is anywhere near the end of its depreciation. For week after week there has been an enlargement of the objective and methods of Mr. Roosevelt in respect of his gold purchase policy. It is now believed that Mr. Roosevelt aims at the total breakdown of the gold standard and a forced revaluation of gold all the world over and that he intends by his gold purchase policy so to influence the international gold market that prices not only in America but throughout the world would be controlled according to his idea of the best level of prices for the world. These reports were received with a degree of incredulity at a stage, but it would now appear that they are more readily believed in. The usual deterrents to a heady programme of inflation are, no doubt, there. But no government can possibly allow its name to be coupled with a policy of riotous inflation, or give an open indication of its aims by daily increases in its official price of gold, unless it has mentally reconciled itself to the danger, on the one hand, of a fall in the prices of its bonds, and on the other, of the repercussions on the countries that are still adhering to the gold standard.

Tho persistence which Mr. Roosevelt has shown in effecting a daily increase in the official price of gold and the continued efflux of gold from the Bank of France raise interesting possibilities by themselves. If we could imagine that the dollar price of gold goes higher and higher at the present rate for some time and the Bank of France is obliged to part with gold in the way in which it has been doing for the past few weeks, then the possibility of France having to abandon the gold standard would not seem to world opinion to be so remote a contingency as is generally accepted to be now. For under such conditions it would not be merely a question of France's capacity to pay out gold that is demanded of her. What is of far more importance is the general effect of such developments on the psychology of international finance as a whole. If to these conditions is added the evidence of increased unwillingness on the part of the politicians of France to face up to the problems of the budget, then one might well expect a general state of panic in regard to the stability of the French currency. There is, indeed, much in this line of speculation which may be criticised as too large an assumption. But assuming for the moment that these developments took place, then it is certain that before the end of the year or early next year France would have to give way to the combination of a number of fortuitous and concerted circumstances and give up the losing battle of the international gold standard. When, thus, the gold standard comes to be abandoned in what is undoubtedly its strongest citadel, the world would be obliged in the conditions, that will then ensue, to reconsider the problem of the value of gold *de novo*, and it is reasonable to hope that such revaluation, as and when it is undertaken, will be carried out with-

out many of the obstacles, against which the World Economic Conference on the one hand, and President Roosevelt on the other, have had to contend during the year.

Though the speculation of the foregoing paragraph must seem to be somewhat far-fatched, there is evidence to show that in London and Paris people have been thinking on more or less identical lines. In France M. Bonnet, the Minister of Finance had adduced the same arguments in order to strengthen his appeal for balancing the budget. According to a message of November 18, M. Bonnet emphassied the imperative necessity of balancing the budget in the Finance Committee of the Chamber, on that day. He stressed the need for maintaining public confidence, specially in view of the currency experiments in the United States and the situation that such experiments might, conceivably, create. Though he declared that the American purchases of gold had practically ceased, he was careful to urge, that no monetary difficulty would arise, if the budget was balanced and the position of the Treasury safeguarded with an additional 17 milliard francs raised in 1934 by way of a new loan.

In Britain, however, the attitude to the new situation has already been indicated. According to a special cable appearing in the *Statesman* from its London Correspondent, the City Editor of the *New Statesman* has pointed out the possibility of a dollar sterling exchange of 6.27 and asks whether the authorities in Britain are so oblivious to the needs of our exporters that they are prepared to tolerate such an exchange. If not, the City Editor points out, the Government have to inform Mr. Roosevelt that they regard the forcible depreciation of the dollar as an unfriendly act. He has gone so far as to suggest that, if the British Government were concerned about the interests of the export trades, they would utilise the resources of the Exchange Equalisation Fund to push the pound along with the dollar. Then in that case, the franc would rise to 62 to the pound, when the dollar is worth 50 cents to gold, and this, he thinks, would probably drive France off the gold standard. With a view to avoid these regrettable developments, the City Editor of the *New Statesman*, it would appear, has suggested that the British Government should "through diplomatic channels seek to convince the President that his gold policy is not only an unfriendly act, but is doomed to be a failure as a means of uplifting the internal price level." As it is hopeless to use official diplomatic channels for an economic agreement, it is suggested that "Professor J. M. Keynes should be sent to Washington to talk off the head of Professor Warren."

It is interesting that within a few days of the suggestion to send Mr. Keynes to America to dissuade President Roosevelt from his gold purchase policy, the President himself is said to have encountered much opposition from among his own advisers. On November 16, came the announcement that both Mr. Woodin, the Secretary and Mr. D. Acheson the Under-Secretary are leaving the United States Treasury. It is also learned that a son of the former Ambassador to Turkey will be Acting Secretary to the Treasury, pending the return of Mr. Woodin. It is stated by the Administration that Mr. Woodin will have complete leave of absence owing to his suffering from infection of the throat and the necessity of constant treatment under specialists. As for Mr. Acheson, official circles express the opinion that he resigned voluntarily to make room for the new comer. But it is generally felt that Mr. Woodin submitted his resignation much earlier and that in the present stage of his programme Mr. Roosevelt is anxious that it should not be generally known that Mr. Woodin is not in agreement with him on the question of gold purchases. Mr. Woodin's leave of absence, it is, therefore, suggested, is a "face-saving device" of Mr. Roosevelt who now becomes the real head of the Treasury. Another unexpected developmnt is the resignation of Mr. Sprague, the Financial Adviser to the Treasury. In this instance, no such camaflouge is made as in the case of Mr. Woodin's retirement. It is announced that in a letter to President Roosevelt, Mr. Sprague definitely stated "there is no defence against the drift into unrestrained inflation other than organised public opinion, to which I propose to contribute." Mr. Sprague is an opponent of the attempt to secure a speedy rise in prices through the present policy of gold purchases. Mr. Sprague is of the view that a rise in prices can develop only from a sustained demand for labour and materials; and he contends that there is nothing to show that the depreciation of the dollar has induced such a demand. He believes that the present policy threatens a complete breakdown in the Government's credit and says the alternative is to abandon the present policy or meet the Government's expenditure with additional paper money.

It is thus clear from all these that the President has begun to encounter some opposition even among his advisers in the matter of the gold purchase policy. But there can be no doubt that the resignation of a few officials will not deter President Roosevelt from his avowed intention of trying to raise world prices through gold purchases. He has now happily behind him the vast inflationist opinion in America. Only recently the Conference of Senators industrialists and economists at Washington summoned by the inflationist senators, Mr. Thomas and Mr. Smith, passed a resolution urging "that the gold purchase policy should be continued until commodity prices reach the 1926 level when stabilisation should be effected." The Conference has also appointed a committee to submit recommendations for the use of silver. Senator Thomas proposed that the Government should initiate a silver policy similar in aims and methods to the gold plan under which the price of silver would be increased gradually to 75 cents an ounce and the purchased silver would be used as the basis of new silver certificates at the rate of one ounce a silver of 25 cents of gold. With this determinedly inflationist opinion behind him Mr. Roosevelt is certain not to get unduly nervous because of the resignation of one or two officials.

One effect of this week's developments may perhaps be noted in passing. If, as is indicated, the British Government should take up a definite line and opposition to inflation within the country should crystalise, all this might well have the effect of patting up the back of President Roosevelt. It must be said to the credit of the President that for a long time since April 19, he has resisted the demands of the inflationists and has tried his level best to circumvent the necessity for inflation in carrying out his recovery programme. It may be that on more than one occasion the monetary policy was not properly conceived to secure the necessary rise in American commodity prices and generally world prices. Notably so, was the policy of purchasing newly mined gold in America at increasing official prices. Any one should have been able to see that the price paid by the American Treasury to the miners would make no effect whatsoever on the general level of prices either in America or elsewhere. Repeated failures and disappointments can only serve to whet the appetite of inflationists; and by all tokens it would seem that President Roosevelt is now less disposed to resist the demands of inflationists like Senator Thomas than he ever was in the earlier stages of the Recovery programme. It is difficult to imagine fully what consequences the further depreciation at the present rate will have on the general conditions of international finance.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Thursday, November 23.

Coals were again leading the market this week the enquiry being quite fair and values on the whole better. Jute remained steady with a slightly easier undertone due to profit taking. There was a sharp fall in Hukumchands, prices sliding down to Rs. 11 from Rs. 13. Teas were maintained. Government paper was steady but quiet round about Rs. 82. Sugar shares were again easy sellers out balancing buyers.

Government Paper.—3½ per cent. after being dealt at Rs. 81-14 rise to Rs. 82-4. Closing round about Rs. 82. 3½% 1947-50 was done at Rs. 93. 4% 1960-70 having buyers at Rs. 98.

Jute.—Adamjee appeared on the market after a long time and was dealt in at Rs. 9-4. Howrahs opening at Rs. 48-8 declined to Rs. 47-12 rising back to Rs. 48, Kamar hatty changed hands at Rs. 484, Hukumchand ordinary marked down to Rs. 11-4 and Preference to Rs. 99-8, Reliance marked back to Rs. 68-8, Deltas changed hand per Rs. 326.

Coal.—A fair volume of business was reported done with rates well maintained. Panch Valley marked sharply up to Rs. 37-4 and Amalgamated to Rs. 15, New Beerbhoom were in good demand at Rs. 13-8. There was a strong enquiry for Samla at Rs. 2-14, Talcher were done at Rs. 2-2.

Tea.—More business was done in Tea shares, prices showing little change. Hattikhara were marked back to Rs. 21 while Eastern Cachar were dealt in at Rs. 11. New Terai and Samgaon were changing hands at Rs. 12, Rajnagor was done at Rs. 4-3.

Cottons.—Were more or less unchanged small business being done in Kesoram at Rs. 3-3.

Banks.—Imperials fully paid improved at Rs. 1,246 while Centrals at Rs. 24 were well maintained.

Miscellaneous.—Indian Wood Products were dealt in at Rs. 29-12 and Ivan Jones at Rs. 2-6. Ryam marked down to Rs. 34-8 and Carews at Rs. 14-8. Bengal Iron also marked back at Rs. 3 while Bengal Assam Steamship had buyers at Rs. 180. Benares Electric (Old) were dealt in at Rs. 11-8 while National Indian Life came to deal at Rs. 227.

MADRAS STOCK EXCHANGE

(By Wire.)

(From Our Correspondent)

Madras, November 23.

The government securities market was extremely quiet with a weak tendency. Operators were not interested in the market owing to the daily discouraging news from London. 3½ per cent. Paper touched Rs. 81½, closing better at Rs. 81-10. 4 per cent. 1960-70 Loan lost a few annas at Rs. 97-15, 3½ per cent. 1947-50 Loan was the only loan which attracted any attention and was extremely steady at Rs. 93. Short and medium dated loans were marked down without much business resulting. The higher rates offered by Government for Treasury Bills is deterring investments in giltedge and if Treasury Bill rates rise higher we may see lower levels for securities. Mysore Loans were wanted at quoted levels and the new Cochin Loan at par with sellers scarce. There was a good enquiry for Madras Corporation debentures with sellers reserved. Joint stock company debentures came in for good attention, especially Vellores at Rs. 102 and United Nilgiri Teas at a slight discount. But lack of sellers hampered business. Amongst preference shares Spencers hardened to par and Tata Iron and Steel Second Preferences to Rs. 103 closing quieter. Banks were firm. Imperial Bank fully paids were done at Rs. 1245 and Contributories at Rs. 308. Indian Banks were taken up at Rs. 93 with no sellers under Rs. 93½ . Electrics were steady Trichinopoly Srirangam ordinary shares were wanted at Rs. 142 and Vellores were transacted at Rs. 9-12 with buyers over. Cotton shares were steady. Buckinghams were firm at Rs. 185 and Gokaks at Rs. 105. Cambodias and Kaleeswarars had sellers at quoted levels without business resulting. A big block of Madura Mills changed hands at Rs. 31½ with buyers over. Sugars were steadier. Deccans Old were taken up at Rs. 260 and the New at Rs. 63 with further buyers at these levels. East India Distilleries were enquired for at £1-5-0 but no business resulted. Cements were quiet with isolated deals in Bundis at Rs. 24½. The Planting section was firm in Rubbers. Cochin Malabars were enquired for without inducing sellers. Some of the Strait Dollar issues also attracted attention. In Teas Periakaramalais were a strong feature with buyers up to Rs. 32. Devasholas Highland Produce and Peermades had all buyers with no business resulting in the absence of sellers. The Miscellaneous section was featureless.

MADRAS MONEY MARKET

We have experienced another week of unutterable dullness and there have been no transactions locally worthy of comment although it seems fairly certain that there will be no immediate change in the Rupee ratio there is nevertheless a distinctly nervous feeling and with commodities standing at their present levels and no fresh gold exports, the rupee is barely steady at 1/16d. above the lower gold point. T.T. selling rates may be quoted at 1s. 5 13/16d. this year and 1s. 5 25/32d. January-February and 1s. 5¾d. thereafter. Banks are buyers of three months sight bills at 1s. 5 31/32d. for any delivery.

Call money continues easy with good lenders at 1 per

BOMBAY STOCK EXCHANGE

(By Wire)

(From our Correspondent.)

Bombay, 23rd November.

Giltedged Securities ruled quiet. Comparitively narrower fluctuations transpired in 3½% Government papers. From the previous close of 81/14/- the rate touched the highest on Friday at 82/3/- on bullish Calcutta advices and remained steady till Tuesday. On Wednesday owing to lower advices from London, the rate touched the lowest at 81/6/-; but to-day it firmed up again to 82/- and closed at 81/13/6, as the Indian sterling loans in London ruled steadier yesterday. The trend is uncertain, due to the presence of many factors in the general world conditions which may affect it.

Mill shares ruled steady till Monday and reached maximum prices on Tuesday; but later in sympathy with other markets eased to some extent owing to the nervousness over uncertain exchange. Centuries and Kohinoors showed improvement on balance. Big power shares had big reverses on Saturday on the unloading by the prominent operator. Bombay Burma Old Issues were in much demand from Saturday to Tuesday. Tata Steels strengthened on Tuesday but later declined. Fluctuations are given below. As for the cash section, Tata Steel. Preferences improved to 102. But Imperial Bank Old issues declined from 1,250 to 1,242/8/-, Lakshmi's from 750/- to 741/4, Sholapurs from 3,050/- to 3,000/- and Bombay Telephones from 79/12/- to 75/4- In Currimbhoy group shares, Indore Malwa and Indian Bleaching improved from 68/12/- and 95 to 87/8/- and 127/8/- but closed at 78/12/- and 126/4/- respectively. The trend is uncertain. Bombay Dyeing previous close 757/8/- highest 765/- lowest 759/6/- close to-day 760/-. Century 190/10/-, 201/4/-, 194/6/-, 199/6/-, Nagpur 230/-, 242/8/-, 231/4/-, 231/4/-, Kohinoor 117/8/-, 125/10/-, 121/4/-, 123/12/-, Newgreat 105/1/-, 113/12/-, 100/-, 105/10/-, Indian Cement 266/4/-, 260/-, 256/14/-, 258/12/-, Andhra Valley ordinary 1,352/8/-, 1,322/8/-, 1,326/4/-, Tata Power ordinary 946/4/-, 945/-, 907/8/-, 917/8/-, Bombay tramways 133/2/-, 135/-, 130/-, 134/1/-, Bombay Burma (old) 328/12/-, 356/4/-, 347/8/-, 347/8/-, Tata Steel ordinary 47/-, 49/-, 47/8/-, 47/8/-, Tata Steel preferred 173/2/-, 189/6/-, 173/12/-, 180/10/-.

IN TIMES OF DEPRESSION

A Life Assurance Policy should never be sacrificed. Valuable as it is at all times, its value is enormously enhanced in times of trade depression, with consequent falling incomes and depreciating securities.

Your future is SAFE—with the

JUTE AND JUTE GOODS

JUTE

During the current week the market has ruled extremely narrow and absolutely featureless. There has been hardly four anna fluctuations in the futures market. In ready and November Pucca bales business has been done at Rs. 24. There have been buyers of Indian Jat on the basis of Rs. 3-8 and Rs. 4 per maund sellers asking annas two per maund more.

Imports in Calcutta remain unchanged. But arrivals in Moffussil are showing a small decline and it is anticipated that the same will continue until the values show an improvement.

The futures market has ruled very narrow, business passing being of a very meagre nature. Sellers are not willing to discount prices, while buyers are holding considering the present price levels to be low. The market is likely to rule featureless for some time.

JUTE MANUFACTURES

During the week the market has ruled steady but quiet, the daily fluctuations in values were very narrow. There has been very good business between the bazar, shippers and mills in the course of this week both in hessians as well as heavy goods. The sales which ran up to the middle of next year have been fully absorbed by the buyers.

In the near hessians a long bull has been unloading for the past two weeks and is bearish in his views. But a small group of bull operators is holding a fairly large quantity considering the smallness of stocks a strong factor to keep the values up. Apart from usual buying and selling there is no fresh feature in the market worth recording.

The short time working agreement comes to an end during the middle of next year. Efforts are reported to be made to extend it further. It is very much desirable that it should be extended in view of the small offtake of jute goods. At the same time the negotiations must conclude without the least possible delay and thus save the market from undue suspense and wide fluctuations caused by the protracted negotiations and wild rumours. It is reported that certain group favours the present arrangement while some favour reopening of 5 per cent. hessian looms out of 15 per cent. looms that were sealed. If the looms that were sealed were to be opened it will surely have a bearish effect on the market.

Shipment of hessians up to date is reported to be about 6 crore yards and considering the fairly good bookings it is expected that the stock position at the end of the month will reveal no change, over the past month, the month's production having been fully exported. This has certainly been a strong factor in keeping the values up.

Total reported sales for the week ending Saturday, the 18th November, 1933.

COTTON AND COTTON GOODS

COTTON.

By Wire

(From Our Correspondant)

Bombay, 23rd Nov.

Cotton New York January dropped to 9.95 on Friday from the last close of 10.29 and closed yesterday at 10.07. The sterling dollar rate declined from 5.32 to 5.20⅛ and again rallied to 5.39⅛. The market is devoid of interest. Confidence is impaired due to the uncertainty over Government's monetary policy. Liverpool January improved from 4.75 to 5.01 and closed yesterday at 4.83. Local rates have eased due to depreciation of Dollar and due to the delay in an agreement being reached with Japanese. Broach touched lowest to-day at 178.

During the week under review the market has ruled quiet and values on balance have ruled easier when compared with the previous week. The decline has been due to further fresh decline on dollar and a bull liquidation as a result thereof. The new crop is moving with full vigour and pending the Indo-Japanese settlement there has been very little business from that country. The immediate outlook of the market is far from bullish and values are likely to decline further.

PIECEGOODS

The small activity in the market that was noticeable during the previous week has passed off and the current week has ruled easy and featureless. The idle conditions have been partly due to a short decline in rupee-sterling exchange, the delay caused in announcing the Indo-Japanese settlement and stiffening of rates in Lancashire costs.

Fresh but very small business has been done in Japanese standard lines, the belief being that the import duty is very much likely to be reduced. Business however can not be transacted freely unless and until the terms at settlement are announced.

Very little business is done in Indian goods, the offtake is very poor except for retail seasonal demand and stocks in Bombay and Ahmedabad are reported to be very heavy.

In the yarn market there is a sharp reaction in contrast with previous weeks and the trading conditions can not be better described than disappointing. But the undertone in this section is not unhealthy and values have been well maintained. But the next two months are usually off season period in the yarns market and if trading shows a shrinkage it is nothing surprising in it. Some business is reported done in Indian yarns, Lancashire coming next. No business is reported in yarn from Japan.

GOLD

(By Wire)

(From our correspondent)

Bombay, 23rd Nov.

Gold prices in America have not advanced rapidly as was intended, while elsewhere they have declined on the contrary. The local rate has sunk below 32/- after a long time. Budgetary difficulties in France have lowered the franc and rumours are rife about the possibility of France giving up the gold standard. To-day the franc rate is quoted at 83.68. The local gold rate was about 31/15 at 5-30 p.m.

There has been a fresh decline in gold in the course of this week. London-Newyork cross rate had gone up to $5-50 declined to $5-27 during the middle of the week, but towards the close again rose to $5-42. In consequence there has been a further appreciation in sterling and London-Paris cross rate is quoted at 83-65 francs. London gold therefore has gone down from £6-9-0 to £6-6-6 and Bombay quotations have come down to Rs. 32-1. The price fixed for U.S.A. for gold purchases abroad has been raised to $33-76. Due to Indian prices being higher than London a shipment of gold was already reported in the last week of October. Further sales in India are reported to have been made and fresh shipments are therefore very likely. Exchange has ruled very quiet, and in case gold exports show a further falling off exchange must rule further easy.

Stocks in Bombay are pretty heavy but fresh arrivals from the Moffussil will be reduced if the prices rule easier.

LONDON **(Air-Mail Week.)**

Gold reserve against notes of the Bank of England was £190,447,031 on the 1st instant comparing with £190,447,029, the figure for the previous Wednesday.

During the week the Bank purchased bar gold to the total value of £91,304.

In the open market gold was available in substantial amounts and was readily taken up by the Continent, the destinations however being undisclosed.

The announcement of the Chairman of the Reconstruction Finance Corporation on the 6th instant gives the amount of domestic gold purchased by the United States since such purchases were authorised, as $2,800,000 worth. Regarding foreign gold purchased it was stated that the price paid was not far from the domestic price and it was later given out that such purchases amounted to between 2½ and 3 million dollars.

The following were the United Kingdom imports and exports of gold registered from midday on the 30th October to midday on the 6th November:—

SILVER

(By Wire)

(From Our Correspondent)

Bombay, 23rd Nov.

Silver prices have again fallen back, as nothing has come out of the agitation of silver protagonists in America. December rate was quoted 56/7/6 at 5-30 p.m.

Silver.—The market has ruled easy and featureless. Business in London was done in the neighbourhood of 18⅜d. America has been a small buyer and China a small seller. India has acted both ways but the nature of the entire business was very poor. Local market has ruled at Rs. 57 for settlement the same declining to Rs. 56-15 towards the close of the week. There is very little interest in the market. Stocks and daily offtake remain practically unchanged as reported last week.

The Silver agreement that was arrived at by the various silver producing and using countries during the last July in London at the World Economic Conference, was brought before the Assembly on Tuesday by the Finance Member. The same was duly accepted for ratification by the Government of India. This, however, had no effect on the market whatsoever.

25 YEARS TEST

REVEALS THE BEST

Service: For over 25 years "The Indian Mercantile" has served the Indian Public with complete satisfaction.

"Dependable" is no exaggerated description of this indigenous concern which has at the time Assets exceeding three times its paid-up capital and has paid, with rare exceptions, handsome Dividends since its inception.

Life policies issued by this Company are scientific, up-to-date and designed to meet individual requirements at competitive rates of premium.

Agency Terms are unique and treatment sympathetic.

LONDON (Air Mail Week)

A rise of ¼d. for cash and 3/16d. for two-months positions with prices fixed at 18⅝d. marked the opening of the market during the week. Price movements were small and the tendency was firm and on the 7th prices reached 18⅝d. and 18¾d. Steady New York buying was responsible for this firmness. China and the Indian bazaars operated both ways. Continental sales were moderate.

On the 8th instant there was a reaction of ¼d. in both the quotations due to sales by the Indian bazaars. The tone however remains steady and it is expected, will depend on American support. If this is not forthcoming there will be a slightly easier tone.

TEA

Sale No. 23 was held on 20th and 21st November, 1933 when 23,921 packages of tea leaf with export rights, 9,130 packages of leaf and 6,076 packages of dust for consumption were offered for sale. The average sale price obtained was annas 0-9-2, 0-4-3 and 0-5-0 per lb. respectively.

Quality showed some improvement only a few Dooars invoices having slight autumnal character. Market for export tea ran on last weeks lines, the demand for better types was slightly poorer. As for internal consumption tea a very strong market prevailed and there was a good general enquiry. Dusts were very strong with a slight upward tendency.

The following are the full particulars of sale No. 23.

Teas with Export Rights

RAILWAY RATES

By K. C. SRINIVASAN

Rs. 10/-

This book is the first of its kind to subject to a critical study the law and theory of railway freight rates *in India* viewed in the light of the revolutionary post-war changes in fundamental conceptions regarding the relation of the State to the transportation industry. How the existing rates arrangements in India foster the growth of industries and the development of agriculture is frankly discussed with the aids of illustrations garnered from many sources; the trend of modern railway legislation is clearly outlined; the Law of Reasonable Rates, of undue Preference, of Terminals, etc., is expounded with the help of frequent citations of cases; the procedure and grounds of proof in rates complaints are lucidly detailed. The treatment of this important subject is interesting.

B. G. PAUL & CO. BOOKSELLERS,

MADRAS.

GRAINS AND SEEDS

WHEAT

The market during the current week has ruled very easy and values have shown a fair decline the latest quotations are Rs. 2-15-6 per maund. The world wheat markets after reports of cut in Australia and in Canada have liquidated. In the local market too there has been heavy liquidation and values have in consequence gone down. With better crop prospects there is little to justify any appreciable rise in near future.

Quotations:—

	Rs. As. P.
Calcutta	
Punjab Ready	3 3 6
Cawnpore Ready	3 3 6
May Beta	2 15 3
Liverpool	
Rosafe Parcels (64 lb.)	21s.
Baruso Parcels (64 lbs.)	20s. 9d
Australian South Parcels	23s. 3d.
Chicago (per Bushel)	
December	$0.88⅞
May	$0.92⅜

LINSEED

The market has ruled quiet but steady, values being maintained in the neighbourhood of Rs. 4-4. There is no fresh feature to report.

Quotations:—

	Rs. A. P.

METAL MARKET REPORT

WEEK ENDING 23-11-1933.

The following are the nominal prices:—

Galvd: Corr: Sheets.—This market continues lifeless. Demand from the Moffussil markets is disappointing although a few small orders have been booked from the Chandpur area at very cut prices. Spot prices for British materials continue at previous levels but prices for Tata sheets are slightly weaker as a result of increased arrivals.

The London market continues unchanged at the level of £16-10-0 c.i.f. with duty paid for India and £11-5-0 f.o.b. for other markets except Scandinavia. Since the completion of the Argentine order this branch of the Industry has experienced a quiet time. There is little or no forward buying from India which is likely to react favourably on the ready market in Jan./Feby.

Quotations for the indigenous sheet continues at the level of Rs. 29 per ton with no further business reported. Dealers are not committing themselves beyond December delivery.

There are no fresh quotations from the Continent this week.

Spot Prices.

Tata	... ...	...	Rs. 10-14 per cwt.
British Double **Khela**		...	,, 11-5 ,, ,,
British D. L. Brand		...	,, 11-6 ,, ,,

Galvd: Plain: Sheets.—There is no change to report.

Black Sheets.—Prices continue steady and few parcels have been booked for Nov./Dec. shipment from the U. K. The London quotation for 24 gauge is round about £10-0-0 per ton F.O.Q.

Rods.—The Continental prices continue at previous levels of £6-5-0 c.i.f. for Rounds and £6-17-0 for Squares. The ready market is weaker and lots have been sold at the jetties as low as Rs. 4-10 per cwt. which is 15sh. below cost.

Plates, Angles, Joists, Bars Etc. (Tata).—There is no change to report except for Bars which continue weak.

MYSORE GOLD OUTPUT

Slight Decrease

(From Our Own Correspondent)

Bangalore, November 21.

According to the administration report of the department of Mines and explosives for the year, 1932-33 of the Government of Mysore, the total number of leases, licenses and certificates of approval during the year was 65 as against 66 in the previous year. The total area covered by mining leases and prospecting licenses was 20,272 acres, and the total rents and leases recovered in respect of them amounted to Rs. 16,09,68.

The total number of gold mining leases was 21. Mining operations were in progress in four blacks as against five in the previous year, the Balaghat mines having ceased operations from May 1, 1933, when the property was transferred to the Nandidroog Mines, Ltd. The nominal and paid-up capital of all companies operating in Mysore amounted to £1,563,000 and £1,513,772 respectively for 1932, as against £1,717,000 and £1,667,737 in the previous year.

INCREASED VALUE

The total quantity of fine gold and silver produced during the year, 1932 amounted to 329,574,899 ounces and 2,781,139 ounces respectively against 3,30,434.24 ounces and 22,604,850 ounces during the previous year. The total value of fine gold and silver produced during 1932 amounted to £1,925,415-13-10 and £1,561,540-18-4, the increase in value being due to the high premium of gold. The total amount pain in dividends was £412,865-14-6, as against £219,010-16-0 during the previous year.

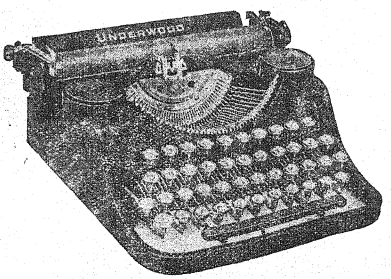
The estimated total reserves of all the mines at the end of the year shows an increase of 152,075 tons. No prospecting or mining work for gold was done outside the Kolar Gold Fields. The Champion Reefs and Oorgaum Mines have reached vertical depths of over 7,200 feet below the field datum.

NOW !

You Can Afford

THIS PORTABLE TYPEWRITER

A FULL-FLEDGED PORTABLE IN EVERYTHING BUT PRICE



The newest member of the Underwood Portable Family. A genuine writing machine at the lowest price ever listed for a complete typewriter ! Features available only in portable typewriters costing much more ! CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

SILVER REDEMPTION RESERVE

The outline of the proposals connected with the creation of the Silver Redemption Fund appeared in the last issue of **Indian Finance.** The message of our Special Representative at Delhi, who furnished the information, was received just at the time of going to press; it was, therefore, not possible to offer any detailed comment on a scheme so intricate and important. Our Representative himself would appear to have come in possession of the news late in the afternoon of November 17, with the result that all he could say by way of criticism was to indicate, in a sentence, that the apprehensions of the Finance Member as the framer of the budget had got the better of the Finance Member as currency authority. In regard to a proposal which has been worked out with extreme care and which pertains to three important factors like sale proceeds of surplus silver, profit on revaluation of gold and excess margin of external assets over and above the 50 per cent. with which the Reserve Bank is to start at the outset, we cannot rest content with an epigram as the final view. We have since had time to give more careful thought to the various issues involved in this suggestion. We have also been fortunate in securing a copy of the full text of the Memorandum prepared by the Government in this behalf. (In the usual course, we would not have made use of a document furnished to a Joint Select Committee; but in view of the fact that the Finance Member has announced this week that this question will come up for detailed discussion in the Assembly in the course of the debate on the Reserve Bank Bill, we have ventured to make full use of the Memorandum and also to extract it elsewhere in this issue for the ready reference of our readers). We are now, therefore, in a position to discuss the proposal of the Silver Redemption Reserve in all its aspects.

* * *

At the very outset, we may congratulate Sir George Schuster and his lieutenants on the aptness, completeness and suitability of the scheme from the point of view of the various questions that were left over by the London Committee for final decision in India in regard to surplus silver sales and profit on gold in the event of revaluation. With the main outline and purpose of the Reserve as now put forward, we are in full agreement. If we find it necessary to indicate the directions in which modifications are needed, it is only because such changes are, in our view, essential on the very basis of the purposes and objectives which the Government have laid down.

* * *

The essence of the proposals for the composition of the assets to be maintained against note liability is that the Paper Currency Reserve and the Gold Standard Reserve should be amalgamated; that all the gold held by the two Reserves at the time of the creation of the Reserve Bank should be handed over to the Bank, the stocks of gold being valued on the old parity; that the external reserve, made up of gold and sterling securities, should, at the start, be equivalent to 50 per cent. of the liability; and that amongst other assets to be transferred to the Bank, silver coins should be for a total of Rs. 50 crores. On the basis of the P.C.R. statement as on August 31, 1933, (at which date the silver stocks attained the maximum point reached during the current year), the total of silver coins and bullion came to the nominal value of Rs. 105.41 crores. On the basis of the silver rupees to be transferred to the Bank being only Rs. 50 crores, the silver which will have to be retained by the Government should be Rs. 55.41 crores (nominal value). It is from the silver thus retained by the Government that sales will be effected, as, for instance, contemplated in the international silver agreement which was discussed in the Assembly and ratified thereat in the current week. What is to be done with the proceeds of any sales of surplus silver? In the second place, the present Reserve Bank Bill provides for the gold holdings in the Reserve being valued at the old parity, that is, on the basis of Rs. 21-3-10 per tola. The present market value of gold in India is in the neighbourhood of Rs. 33. There can be no doubt that India will never go back to 1s. 6d. gold even as Britain will never link her currency to gold on the basis of 124.24 francs to the pound. If and when the rupee is stabilised in terms of gold, it is bound to be at a level far lower than the old parity of 1s. 6. gold. Which means that at the time of such stabilisation, the gold in the reserves will have to be revalued and will show a considerable hidden profit. What is to be done with the profit so released?

* * *

In the third place, on the occasions when the two sterling loans were raised in the current year, it was suggested, in semi-official quarters, that one of the purposes of such external borrowing was to facilitate the creation of the Reserve Bank. The remittance programme in the current year was put down in the budget estimate at £21 million. Sterling purchases up-to-date are nearly £21 million. We have still another four months during which it might be possible for the Controller of the Currency to purchase Councils in the open market. Thanks to the reinforcement of the Home Treasury balance by two sterling loans and by copious remittances from India, it is quite possible that the Government might see their way to strengthen the sterling assets in our reserves in the same way as they did in 1931-32 and 1932-33. If so, it may well be that at the time when the Reserve Bank is to be inaugurated, the total of gold and sterling securities in our reserves is found to be in excess of 50 per cent. which is laid down in the Reserve Bank Bill as the proportion of external reserve at the commencement. If there is any excess over 50 per cent., what is to be done with the additional margin of sterling securities? These are the three problems which have been tackled in the Memorandum prepared by the Government in connection with the setting up of the Silver Redemption Reserve. These problems are closely connected; and we agree that they should be treated together.

* * *

The first proposition which the Government put forward is that the proceeds of any sales of surplus silver (to be retained by the Government under the arrangement proposed) and on any surplus realised on the sale or revaluation of gold (to be transferred to the Bank) would represent assets originally accumulated against the issue of currency and as part of the ordinary currency business of the Government. It is, therefore, agreed and understood that such assets should be regarded as primarily earmarked for currency purposes. With the first proposition thus stated, we concur fully.

* * *

As a second proposition, the Government raise the question whether it necessarily follows that such assets should be directly or immediately absorbed in the currency reserves of the Bank. Their own answer to the query is in the negative. They advance three reasons for this conclusion:

1. If, at any future date, the Reserve Bank delivers further surplus rupees to the Government, the latter are bound, under the provisions of the Bill, to take them over and pay full value. So long as a liability of this kind is imposed statutorily upon the Government, it is argued that a separate reserve against such liability must be maintained.

2. From a practical point of view, accumulation of excessive funds in specially earmarked reserves may, on the one hand, involve a substantial loss of interest or may, on the other hand, prevent the utilisation of surplus assets for repayment of outstanding loans. It is pointed out that the repayment of the £15 million sterling loan in January, 1932 from the Home Treasury Balance had a far better effect on the credit of the Government than would have been the case if the extra resources had been merely used for accumulating reserves.

3. Over-ample assets in the external reserve might "put the Bank into a position of being able with undue ease to expand the currency against rupee assets when that was not justified".

* * *

We readily grant that there is force in everyone of these contentions. We are also prepared to agree that against the liability assumed by the Government in respect of payment of full value against further surplus rupees which they may be required to take over from the Reserve Bank, the maintenance of a separate reserve is advisable. But we suggest that before any decision is arrived at as regards the percentage of assets to the handed over at the initial start to the Reserve Bank in respect of external reserve, careful consideration should be given to the plea which we urged in the *Reserve Bank Supplement* for a far higher proportion than the one suggested in the Bill. We showed how it was absolutely essential that in the case of a country like India with heavy foreign liabilities of a recurring character, the currency reserve should contain an amount of foreign assets at least equivalent to the maximum of the remittance requirements of a twelvemonth period, over and above the minimum that was prescribed. The initial foreign assets should be, we urged, equivalent to the minimum percentage now specified *plus* the equivalent of £50 million, £50 million being approximately the total remittance requirements of India both on Government and private account. We also showed how the adequacy of the external reserve must be decided not only in relation to paper notes but in relation to the combined paper and silver notes. We should, therefore, reiterate that the Government should hand over, at the inauguration of the Reserve Bank, a total amount of gold coin and bullion and sterling securities which shall be not less than 60 per cent. of the note liability. Subject to 60 per cent. being the criterion of the adequacy of the external reserve, we fully endorse the proposal for the creation of the Silver Redemption Reserve.

* * *

The further details of the Silver Redemption Reserve are as follows:

(*a*) The sale proceeds of surplus silver are to be credited to this Fund.

(*b*) While it is agreed that the whole of the Government's gold holdings will, in any case, be handed over to the Bank, it is suggested that if there be any margin of external assets which the Government, at the time when the Bank is set up, did not consider it necessary to hand over to the Bank, and which they would consequently retain for their own purpose, such surplus should be appropriated by being transferred as opening balance to the Silver Redemption Reserve.

(*c*) (1) Surplus on account of gold is to be considered firstly in regard to any sales that may be made. The Government consider that sales of gold are unlikely.

(2) The second consideration is in the case of profit on revaluation. It is recognised, in this connection, that such paper gain should not be swallowed up in ordinary revenue but should be devoted to some currency purpose. It is suggested that such profit should be used as additional fortification of the Silver Redemption Reserve.

(*d*) The funds in the Reserve would be invested by the Government in their entirety in gold or sterling securities.

(*e*) The Reserve should be allowed to accumulate until it reaches the total of Rs. 10 crores.

(*f*) Interest on the investments held in the Reserve should not be added to the Reserve but transferred to current revenue.

* * *

We agree with (*a*). As for (*b*), we agree subject to the proviso that the initial assets in the external reserve should be 60 per cent. of the liability and that any excess over 60 per cent., if any, is to be transferred as opening balance to the Silver Redemption Reserve. Turning to (*c*) (2), we are afraid that the 60 per cent. margin which we insist upon can be provided only by the Reserve being given credit for the hidden profit in gold holdings. In any case, this clause suggests the need of the maximum of the accumulation in the Silver Redemption Reserve being kept at a figure higher than Rs. 10 crores. In regard to (*d*), we suggest that the entire funds in the Silver Redemption Reserve should be invested only in gold. The British monetary authorities have been utilising every possible occasion to strengthen their stocks of gold. The American Government are now committed to a policy of buying gold at home and abroad at rates to be determined from time to time in consonance with market quotations. While gold standard is dead in most countries of the world, the craze for gold is as alive as ever. The Government authorities in India have been doing the greatest harm by allowing colossal shipments of gold to take place during a period when every other country was doing everything in its power to strengthen its gold holdings. It is time that the Government of India bestir themselves in this matter and take active steps to bring their policy in line with the policy of countries like Britain. We suggest that the members of the Central Legislature should insist on the Finance Member giving an undertaking that all proceeds of silver sales and other accruals in the Silver Redemption Reserve would be utilised for the purpose of buying gold. The Government should have no option, as is now suggested, to buy sterling securities. We know what the option to buy gold or sterling securities means in practice. Past experience clearly indicates that the option of this kind means that Government buy only sterling securities and never gold. It is dangerous to permit to the Government an option of this character. They should be under statutory obligation to invest the funds of the Silver Redemption Reserve in gold and gold only.

* * *

With regard to (*e*), there is no case for laying down that the Reserve should accumulate only up to Rs. 10 crores. There should be no upper limit suggested on the present occasion. When India places her monetary system on a permanent basis as and when international conditions become clear, then will be the time for taking proper account of the actual profits realised from revaluation of gold. That will also be the time when any limit for the maximum accumulation of the Silver redemption Reserve should be fixed. When the Gold Standard Reserve was created, no attempt was made to fix the maximum up to which the Reserve was to accumulate. The amounts creditable to the G.S.R. continued to be invested without any thought of an ultimate total being reached. When the Reserve reached £40 million, it was only then that it was decided to maintain the Gold Standard Reserve at the figure of £40 million. Similarly, there is no need for fixing, at the time of creation, the upper limit for the Silver Redemption Reserve. As for (*f*), we regret we can-

not sympathise with the Finance Member in his capacity as the framer of the budget. We would like him to remember his responsibility as the currency authority. The interest on the investments, if any, of the Silver Redemption Reserve must be utilised, as was done in the case of the G.S.R., in further strengthening the Reserve.

SELECT COMMITTEE MOUSE

The majority and minority reports of the Joint Select Committee on the Reserve Bank of India Bill, as well as several subsidiary reports, were presented by the Finance Member to the Legislative Assembly early this week. They together cover 32 foolscap printed pages and are said to "be the heaviest ever received from any select committee." It would not be perhaps strictly accurate to describe the documents as majority and minority reports. It would be truer to say that the report of the committee has been signed by all the members amongst whom, however, a good many have appended joint and several Minutes of Dissent. The central report is ably drafted, lucidity, precision and felicitous expression being its outstanding features. While we can and do congratulate the Finance Member and his lieutenants on the *manner* of the report, we must express our profound disappointment at the *matter*. In form perfect, the report amounts to nothing in substance. It is more or less an endorsement of whatever was put forward in the report of the London Committee. The Government have not conceded on one single point of real importance. They were sure of a majority in the Committee and they were, therefore, adamant in their attitude.

* * *

It has ben freely talked about that in one or two details, the Finance Member was prepared to make some concession or other. In fact, our information is that, in the first week's discussion, Sir George Schuster agreed to the suggestion that the Governor of the Reserve Bank should be one who had at least five years' banking experience and also expressed concurrence in the principle that the minimum gold holding of the Reserve Bank should be Rs. 44½ crores valued on the basis of old parity. We further understand that despite his commitments in these two matters, the Secretary of State would not accede to the two changes made unanimously during the first discussion of the Bill. When, after the conclusion of the evidence of the bankers and other witnesses, the Committee undertook a second study of the detailed provisions of the Bill, the Government members were unwilling to agree to the qualification prescribed for the Governor and the minimum limit suggested for the gold holdings in the Reserve. These proposals were, however, carried by a majority in the Committee. Sir George Schuster and Mr. J. B. Taylor have, therefore, found it necessary to append a note in which they differ from their colleagues in regard to both these questions. The Government members observe that while they agree that the Governor should be a person commanding the confidence of the business community in India, they feel that the qualification proposed by the committee, namely, tested banking experience of at least five years, might prove extremely embarrassing in practice. As regards the holding of gold in currency reserves, they point out that so far as statutory provisions are concerned, they should not be so framed as to hamper the discretion of the Bank to utilise its currency reserves in whatever manner would be most effective for maintaining the stability of currency. They also affirm that the minimum gold holding should not be raised above Rs. 40 crores which is the figure they have accepted in the Committee by way of compromise.

* * *

It is an open secret that the Secretary of State would not give a free hand to Sir George Schuster in even the smallest detail. From this point of view, Sir George was between the Devil of non-official members demanding a larger measure of liberalism in the proposal and the Deep Sea of the Secretary of State refusing to budge from his reactionary attitude. We can well imagine that in a situation of this kind, Sir Basil Blackett would have "chucked the job" and be done with it. It is the suavity of Sir George that has enabled him to put up with the peremptory dictates of an unyielding autocrat. It would have been far better for India if Sir George had been less suave. .As it is, the Bill, as envisaged in the central report, is detrimental to the interest of the country and totally unacceptable. For our part, we would rather go without a Reserve Bank till the time when we can have a Reserve Bank that is fashioned in the truest and best interests of India. In its present form, the Reserve Bank of India will be nothing but a tool and instrument for the Secretary of State to carry out his dictates and enforce his fantastic safeguards. It will perpetuate the political influence of London and annihilate the economic aspirations of Indian nationals. It will be an institution which will be a preserve for the powers-that-be and such Indians as are acceptable to the powers-that-be. In no sense can the Reserve Bank, as now planned, become a national institution. Vested interests and vested interests alone will control it and continue to control it.

* * *

Amongst the more important Minutes of Dissent, one is signed by nine members and another by three ; and the two of them cover more or less the same ground. As the press report has it, "the Minute of Dissent by Messrs. S. C. Mitra, Azharali and Bhupat Singh covers the ground traversed in the main minority report in all important respects." We may, therefore, consider that, for all practical purposes, the main minority report is signed by twelve members. This report emphasises three points: (1) The Central Bank should be a State Bank ; (2) The ratio must be lowered ; and (3) So as to encourage banking development, free internal remittances should be made available to all scheduled banks through the use of currency chests, and "approved banks" (for which the Reserve Bank should maintain a list subject to the condition that a bank can be put on the list only if it is registered in India and satisfies certain criteria laid down by the Reserve Bank) should be given by the Government interest-free deposit of Rs. 3 lakhs for the first five years for every branch opened by an approved bank at a centre where no approved bank has a branch.

* * *

So far as the question of a State Bank is concerned, the signatories urge that Sir Basil Blackett himself had accepted this proposal by his agreeing to clause 4 of the Joint Select Committee Bill of 1927 ; and that the Central Banking Enquiry Committee, on which European commerce, exchange banks, Imperial Bank, Indian commerce, Indian agriculture and Indian co-operative movement were duly represented have unanimously recommended a State Bank. The plea put forward to the effect that a shareholder plan affords the most impartial and non-political electorate is completely exposed. A passage is quoted from the evidence of Sir Osborne Smith before the Joint Select Committee, to show that the Directors of the Imperial Bank, in most cases, are elected at the meetings of directors and not at annual meetings of shareholders. The real thing is done at the Directors' meeting and the formal thing at the shareholders' meeting. To argue that shareholders exercise any influence in the election of the Directors is proved to be a myth and fiction. The Minority Report has made an unanswerable case in favour of a State Bank.

* * *

At the same time, the signatories realise that insistence on a Central Bank may not be practical politics. Without prejudice to their settled convic-

1. If, at any future date, the Reserve Bank delivers further surplus rupees to the Government, the latter are bound, under the provisions of the Bill, to take them over and pay full value. So long as a liability of this kind is imposed statutorily upon the Government, it is argued that a separate reserve against such liability must be maintained.

2. From a practical point of view, accumulation of excessive funds in specially earmarked reserves may, on the one hand, involve a substantial loss of interest or may, on the other hand, prevent the utilisation of surplus assets for repayment of outstanding loans. It is pointed out that the repayment of the £15 million sterling loan in January, 1932 from the Home Treasury Balance had a far better effect on the credit of the Government than would have been the case if the extra resources had been merely used for accumulating reserves.

3. Over-ample assets in the external reserve might "put the Bank into a position of being able with undue ease to expand the currency against rupee assets when that was not justified".

* * *

We readily grant that there is force in everyone of these contentions. We are also prepared to agree that against the liability assumed by the Government in respect of payment of full value against further surplus rupees which they may be required to take over from the Reserve Bank, the maintenance of a separate reserve is advisable. But we suggest that before any decision is arrived at as regards the percentage of assets to the handed over at the initial start to the Reserve Bank in respect of external reserve, careful consideration should be given to the plea which we urged in the *Reserve Bank Supplement* for a far higher proportion than the one suggested in the Bill. We showed how it was absolutely essential that in the case of a country like India with heavy foreign liabilities of a recurring character, the currency reserve should contain an amount of foreign assets at least equivalent to the maximum of the remittance requirements of a twelvemonth period, over and above the minimum that was prescribed. The initial foreign assets should be, we urged, equivalent to the minimum percentage now specified *plus* the equivalent of £50 million, £50 million being approximately the total remittance requirements of India both on Government and private account. We also showed how the adequacy of the external reserve must be decided not only in relation to paper notes but in relation to the combined paper and silver notes. We should, therefore, reiterate that the Government should hand over, at the inauguration of the Reserve Bank, a total amount of gold coin and bullion and sterling securities which shall be not less than 60 per cent. of the note liability. Subject to 60 per cent. being the criterion of the adequacy of the external reserve, we fully endorse the proposal for the creation of the Silver Redemption Reserve.

* * *

The further details of the Silver Redemption Reserve are as follows :

(*a*) The sale proceeds of surplus silver are to be credited to this Fund.

(*b*) While it is agreed that the whole of the Government's gold holdings will, in any case, be handed over to the Bank, it is suggested that if there be any margin of external assets which the Government, at the time when the Bank is set up, did not consider it necessary to hand over to the Bank, and which they would consequently retain for their own purpose, such surplus should be appropriated by being transferred as opening balance to the Silver Redemption Reserve.

(*c*) (1) Surplus on account of gold is to be considered firstly in regard to any sales that may be made. The Government consider that sales of gold are unlikely.

(2) The second consideration is in the case of profit on revaluation. It is recognised, in this connection, that such paper gain should not be swallowed up in ordinary revenue but should be devoted to some currency purpose. It is suggested that such profit should be used as additional fortification of the Silver Redemption Reserve.

(*d*) The funds in the Reserve would be invested by the Government in their entirety in gold or sterling securities.

(*e*) The Reserve should be allowed to accumulate until it reaches the total of Rs. 10 crores.

(*f*) Interest on the investments held in the Reserve should not be added to the Reserve but transferred to current revenue.

* * *

We agree with (*a*). As for (*b*), we agree subject to the proviso that the initial assets in the external reserve should be 60 per cent. of the liability and that any excess over 60 per cent., if any, is to be transferred as opening balance to the Silver Redemption Reserve. Turning to (*c*) (2), we are afraid that the 60 per cent. margin which we insist upon can be provided only by the Reserve being given credit for the hidden profit in gold holdings. In any case, this clause suggests the need of the maximum of the accumulation in the Silver Redemption Reserve being kept at a figure higher than Rs. 10 crores. In regard to (*d*), we suggest that the entire funds in the Silver Redemption Reserve should be invested only in gold. The British monetary authorities have been utilising every possible occasion to strengthen their stocks of gold. The American Government are now committed to a policy of buying gold at home and abroad at rates to be determined from time to time in consonance with market quotations. While gold standard is dead in most countries of the world, the craze for gold is as alive as ever. The Government authorities in India have been doing the greatest harm by allowing colossal shipments of gold to take place during a period when every other country was doing everything in its power to strengthen its gold holdings. It is time that the Government of India bestir themselves in this matter and take active steps to bring their policy in line with the policy of countries like Britain. We suggest that the members of the Central Legislature should insist on the Finance Member giving an undertaking that all proceeds of silver sales and other accruals in the Silver Redemption Reserve would be utilised for the purpose of buying gold. The Government should have no option, as is now suggested, to buy sterling securities. We know what the option to buy gold or sterling securities means in practice. Past experience clearly indicates that the option of this kind means that Government buy only sterling securities and never gold. It is dangerous to permit to the Government an option of this character. They should be under statutory obligation to invest the funds of the Silver Redemption Reserve in gold and gold only.

* * *

With regard to (*e*), there is no case for laying down that the Reserve should accumulate only up to Rs. 10 crores. There should be no upper limit suggested on the present occasion. When India places her monetary system on a permanent basis as and when international conditions become clear, then will be the time for taking proper account of the actual profits realised from revaluation of gold. That will also be the time when any limit for the maximum accumulation of the Silver redemption Reserve should be fixed. When the Gold Standard Reserve was created, no attempt was made to fix the maximum up to which the Reserve was to accumulate. The amounts creditable to the G.S.R. continued to be invested without any thought of an ultimate total being reached. When the Reserve reached £40 million, it was only then that it was decided to maintain the Gold Standard Reserve at the figure of £40 million. Similarly, there is no need for fixing, at the time of creation, the upper limit for the Silver Redemption Reserve. As for (*f*), we regret we can-

not sympathise with the Finance Member in his capacity as the framer of the budget. We would like him to remember his responsibility as the currency authority. The interest on the investments, if any, of the Silver Redemption Reserve must be utilised, as was done in the case of the G.S.R., in further strengthening the Reserve.

SELECT COMMITTEE MOUSE

The majority and minority reports of the Joint Select Committee on the Reserve Bank of India Bill, as well as several subsidiary reports, were presented by the Finance Member to the Legislative Assembly early this week. They together cover 32 foolscap printed pages and are said to "be the heaviest ever received from any select committee." It would not be perhaps strictly accurate to describe the documents as majority and minority reports. It would be truer to say that the report of the committee has been signed by all the members amongst whom, however, a good many have appended joint and several Minutes of Dissent. The central report is ably drafted, lucidity, precision and felicitous expression being its outstanding features. In form perfect, the report amounts to nothing in substance. It is more or less an endorsement of whatever was put forward in the report of the London Committee. The Government have not conceded on one single point of real importance. They were sure of a majority in the Committee and they were, therefore, adamant in their attitude.

* * *

It has ben freely talked about that in one or two details, the Finance Member was prepared to make some concession or other. In fact, our information is that, in the first week's discussion, Sir George Schuster agreed to the suggestion that the Governor of the Reserve Bank should be one who had at least five years' banking experience and also expressed concurrence in the principle that the minimum gold holding of the Reserve Bank should be Rs. 44½ crores valued on the basis of old parity. We further understand that despite his commitments in these two matters, the Secretary of State would not accede to the two changes made unanimously during the first discussion of the Bill. When, after the conclusion of the evidence of the bankers and other witnesses, the Committee undertook a second study of the detailed provisions of the Bill, the Government members were unwilling to agree to the qualification prescribed for the Governor and the minimum limit suggested for the gold holdings in the Reserve. These proposals were, however, carried by a majority in the Committee. Sir George Schuster and Mr. J. B. Taylor have, therefore, found it necessary to append a note in which they differ from their colleagues in regard to both these questions. The Government members observe that while they agree that the Governor should be a person commanding the confidence of the business community in India, they feel that the qualification proposed by the committee, namely, tested banking experience of at least five years, might prove extremely embarrassing in practice. As regards the holding of gold in currency reserves, they point out that so far as statutory provisions are concerned, they should not be so framed as to hamper the discretion of the Bank to utilise its currency reserves in whatever manner would be most effective for maintaining the stability of currency. They also affirm that the minimum gold holding should not be raised above Rs. 40 crores which is the figure they have accepted in the Committee by way of compromise.

* * *

It is an open secret that the Secretary of State would not give a free hand to Sir George Schuster in even the smallest detail. From this point of view, Sir George was between the Devil of non-official members demanding a larger measure of liberalism in the proposal and the Deep Sea of the Secretary of State refusing to budge from his reactionary attitude. We can well imagine that in a situation of this kind, Sir Basil Blackett would have "chucked the job" and be done with it. It is the suavity of Sir George that has enabled him to put up with the peremptory dictates of an unyielding autocrat. It would have been far better for India if Sir George had been less suave. As it is, the Bill, as envisaged in the central report, is detrimental to the interest of the country and totally unacceptable. For our part, we would rather go without a Reserve Bank till the time when we can have a Reserve Bank that is fashioned in the truest and best interests of India. In its present form, the Reserve Bank of India will be nothing but a tool and instrument for the Secretary of State to carry out his dictates and enforce his fantastic safeguards. It will perpetuate the political influence of London and annihilate the economic aspirations of Indian nationals. It will be an institution which will be a preserve for the powers-that-be and such Indians as are acceptable to the powers-that-be. In no sense can the Reserve Bank, as now planned, become a national institution. Vested interests and vested interests alone will control it and continue to control it.

* * *

Amongst the more important Minutes of Dissent, one is signed by nine members and another by three ; and the two of them cover more or less the same ground. As the press report has it, "the Minute of Dissent by Messrs. S. C. Mitra, Azharali and Bhupat Singh covers the ground traversed in the main minority report in all important respects." We may, therefore, consider that, for all practical purposes, the main minority report is signed by twelve members. This report emphasises three points: (1) The Central Bank should be a State Bank ; (2) The ratio must be lowered ; and (3) So as to encourage banking development, free internal remittances should be made available to all scheduled banks through the use of currency chests, and "approved banks" (for which the Reserve Bank should maintain a list subject to the condition that a bank can be put on the list only if it is registered in India and satisfies certain criteria laid down by the Reserve Bank) should be given by the Government interest-free deposit of Rs. 3 lakhs for the first five years for every branch opened by an approved bank at a centre where no approved bank has a branch.

* * *

So far as the question of a State Bank is concerned, the signatories urge that Sir Basil Blackett himself had accepted this proposal by his agreeing to clause 4 of the Joint Select Committee Bill of 1927 ; and that the Central Banking Enquiry Committee, on which European commerce, exchange banks, Imperial Bank, Indian commerce, Indian agriculture and Indian co-operative movement were duly represented have unanimously recommended a State Bank. The plea put forward to the effect that a shareholder plan affords the most impartial and non-political electorate is completely exposed. A passage is quoted from the evidence of Sir Osborne Smith before the Joint Select Committee, to show that the Directors of the Imperial Bank, in most cases, are elected at the meetings of directors and not at annual meetings of shareholders. The real thing is done at the Directors' meeting and the formal thing at the shareholders' meeting. To argue that shareholders exercise any influence in the election of the Directors is proved to be a myth and fiction. The Minority Report has made an unanswerable case in favour of a State Bank.

* * *

At the same time, the signatories realise that insistence on a Central Bank may not be practical politics. Without prejudice to their settled convic-

tion that a State Bank and a State Bank alone is suitable to the conditions and requirements of India, they are prepared to compromise on the basis of the Stockholders Scheme sponsored by Mr. S. Srinivasa Iyengar and approved of by Sir Basil Blackett. In a stockholders scheme there are two obvious advantages. The yield that is to be offered on stocks would be the same as the borrowing rate of the Government at the time when the stocks are issued. In the case of shares, the yield proposed works up to 5 per cent. There will be a saving of a clean one per cent. by way of annual distribution in the form of dividend. In the second place, the stockholders do not get any vested interest in the reserve fund and other accumulations of the Reserve Bank. They are only entitled to the return of their principal. It may also be added that in the case of the Stockholders Scheme, it would be easier to lay down that at the end of ten or fifteen years, the stockholders would be paid off. The regional plan contemplated in the Stockholders Scheme is calculated to satisfy the provincial ambitions in a more satisfactory way. The electoral college proposed in the scheme will be less open to manipulation than will be the case in regard to the Local Boards now proposed which, in effect, are to be electoral colleges but with only five members elected by shareholders. From every point of view, in fact, even from the Government point of view, there cannot be any objection whatsoever to the Stockholders Scheme. It is only a shareholder plan rid of all its inherent defects.

* * *

As the signatories of the main Minority Report observe, the possibilities of the scheme have not been fully explored. We may go so far as to say that the scheme has not been thought of at all. We shall go so far as to say that if the attention of Sir George Schuster had been drawn to this scheme at an early stage, he might certainly have seen his way to adopt it. We do not see any reason why it should be considered too late even at this stage to adopt it. This is a scheme by the acceptance of which the Government would be able to claim complete unanimity for the fundamental structure of the Reserve Bank. In tht case of an institution like the Central Bank, which depends a great deal on the goodwill and co-operation of the public and banking world and which should command the confidence of the population, the Government should realise the wisdom of doing whatever is possible to secure as large a measure of support as is possible for the scheme ultimately decided on. We appeal to the members of the Assembly to impress the advantages of the Shareholders Scheme on the authorities. We make an even more earnest appeal to Sir George Schuster to pause and enquire whether it is not worth the while to secure the goodwill of the Opposition by agreeing to a scheme which has the hall-mark of approval of diverse interests.

* * *

The Minority Report has made a pithy and powerful plea for the lowering of the ratio. It would appear that the Government members sought to make out that the ratio was only a subsidiary issue of the Reserve Bank Bill ; and that it would be beyond the province of the Select Committee to discuss the exchange position in relation to the Reserve Bank scheme. Great stress would seem to have been laid on a remark of the London Committee that "exchange obligations incorporated in the Bill must necessarily be in accord with the rupee-sterling ratio existing at the time when the Bill is introduced". The Bill was introduced last September in the Simla session. The Government, therefore, claimed that in the light of the recommendation of the London committee the obligations had been incorporated on the basis of the ratio prior to the introduction of the Bill ; and that objection, if any, should have been raised at that stage ; and that, in the Joint Select Committee discussions, the matter could not be reopened. If refuge is sought in a technical point, we can also give a retort basing our answer on a technical point. According to the statutory obligations imposed on the Government by the Currency Act of 1927, India cannot be said to have any ratio. A ratio implies a lower point and an upper point. The Currency Act of 1927 gives only a lower point in terms of sterling and no upper point in terms of sterling. If there was no ratio in force prior to the Bill, there could be no question of incorporating obligations in respect of a non-existing ratio. The Government may argue that though there was no *de jure* rate, 1s. 6d. sterling was the *de facto* rate. Have the Government made any announcement at any time that the upper point would be 1s. 6 3/16d. ; and that they would buy unlimited quantities of sterling at this level? The public demanded an assurance of this kind but the Government did not give it. In the absence of a categorical statement on this matter, we are left with the assumption that we have only a lower point and no upper point even on a *de facto* basis.

* * *

There is no use arguing on technical points. The matter is too serious to be trifled with. Indian and European interests have combined, on the present occation, to demand an immediate revision of the ratio. A businessman of the position of Mr. H. H. Sawyer says that the whole position must be reviewed, all the circumstances must be reconsidered and the ratio revised accordingly and immediately. Mr. Sawyer suggests that if the ratio is not changed, the country should not allow the Reserve Bank Bill to be passed. This view is put forward not by the much-maligned Bombay businessmen or the still-more-maligned political agitator, but by a sane and influential European merchant. Sir Montagu Webb is equally vehement. So is Major Van Renen. Mr. Ramsay Scott is busy speaking from platform and addressing the press on this question. When the varied interests of the country are thus stressing the urgent and imperative need of a lower ratio, it is only an irresponsible and irresponsive Government that can sit still, turning a deaf ear to all protests, appeals and warnings. The Minority Report proves convincingly that if the monetary authorities in the case of the New Zealand Reserve Bank can be allowed to take the view that the ratio was part and parcel of the Reserve Bank, the same argument is equally applicable to India. It is disingenuous and not even ingenious to suggest that the ratio is a subsidiary question. In the present world situation and in the light of the example of other countries, the ratio is the principal question—it is of even more importance than the Reserve Bank proposal. To brush it aside in the way in which it is done shows utter apathy to public opinion in India.

* * *

In regard to free internal remittances, we understand that the Government have accepted this suggestion. We do not as yet know whether they have likewise approved of the proposal to give interest-free deposits to new branches opened by "approved" banks. This idea was strongly recommended by the Banking Enquiry Committee. Sir Basil Blackett was also favourably impressed with it as one of the surest ways of fostering branch-banking development in India. In the Memorandum which was presented to the Select Committee by the Allahabad Bank, the case for such interest free deposits to approved banks is thus stated :

> "The Government have time and again averred their desire to give all possible encouragement to the development of branch banking. In pursuance of this profession, the original bill of 1927 contained a provision to the effect that the Imperial Bank was to be given an interest-free deposit of Rs. 3 lakhs for every new branch opened. All that we ask is an extension of this provision to institutions that satisfy definite criteria laid down by the Reserve Bank backed, if necessary, by deposit of government securities to the extent of the amount so advanced. The acceptance of this suggestion would undoubtedly contribute greatly to the acceleration of banking development throughout

the country, an object which, we trust, will be of special future concern to the Reserve Bank and to Governn.ent."

We have reasons to think that Sir Osborne Smith is strongly in favour of the proposal. We hope that the Assembly members will realise the importance of the suggestion and secure its confirmation from the Treasury benches.

* * *

In regard to the question of compulsory deposits, Mr. B. K. Basu and five others express the opinion that only after indigenous bankers have been linked with the Reserve Bank could the question of compulsory deposits from scheduled banks be properly and usefully taken into consideration. The proposition hereon stated is so self-evident that we need do no more than emphasise it as a reasonable point of view which the Government should be only too glad to accede to. As regards the constitutional question whether the Indian Legislature shall have power to make any modification in the Reserve Bank Bill, we realise that it is an issue in which a discussion is not possible without reference to the White Paper. Nevertheless, the Assembly would be perfectly in the right in insisting that the power of the legislature should not in any way be curtailed. The changes that have been suggested in the various Minority Reports are not only reasonable but must be described as the minimum that is necessary if the Rsserve Bank Bill is to be acceptable to the country. In the absence of a sympathetic attitude from the Government, we, for our part, would not be sorry to see the Bill dead, coffined and buried. Either a satisfactory Reserve Bank or no Reserve Bank at all. This is so fundamental a question that it does not admit of compromise on essentials.

THE ACHIEVEMENTS OF FASCISM IN ITALY

A plea for an open mind and considered judgment of the various economic experiments that are being carried on to-day is made in a lengthy article appearing elsewehre in this issue. And it is interesting in the light of such a plea to examine the report of Mr. R. M. A. E. Turner, Commercial Counsellor to the British Embassy at Rome on the economic conditions in Italy, issued by the Department of Overseas trade in Britain. The world has known enough of Fascism to accept without demur Mr. Turner's conclusion that "the Italian experiment merits the closest attention of the rest of the world". But it would appear that Mr. Turner has not been at pains to preserve that colourless and dispassionate recital of facts and opinions which may be regarded as essentially characteristic of a Blue Book. The author of the report has evidently been infected with enthusiasm for Fascism and all that it has attempted and achieved in the sphere of Italian domestic economy. But there is no reason to suppose that admiration for the better side of Fascism in Italy has vitiated the value of the report for the disinterested student of modern economic organisation and the possibilities of the future in this regard. Mr. Turner has not allowed his recognition of the merits of Fascism to lead him to commit the two natural errors of any narrative account, namely, the suppression of facts that point to a contrary conclusion and suggestions which if they were explicit, would involve a deliberate misstatements of facts.

* * *

In the predicament in which nearly all the nations of the world find themselves to-day, defects of economic policy in matters of detail are of little or no importance. What matters to the mass of people primarily affected and the world as a whole is whether, as a result of the policies that are followed in one country, the ggeneral trend of economic fortunes in that country is towards a better state of material well-being for the people and whether such success has a lesson for the rest of the world by way of suggestion or example. There can, indeed, be little doubt that the Italian people have fared far less badly in the present depression than most other peoples of the world. For one thing, their outlook has remained distinctly optimistic and to-day it may truly be said that the Italian people sincerely believe that if a reduction in the standard of living is the lot of all the peoples of the world, they would have to suffer less than other peoples. Equally, if a recovery is in store, Italy would be able to take much better advantage of it and to achieve much greater economic progress than her neighbours. This is, indeed, the essence of optimism in economic outlook. The report of Mr. Turner affords us an insight into this psychology of the people. In his recent budget speech Signor Jung, the Italian Minister of Finance, stated that the "whole Italian financial machine was based on confidence in the State and the wisdom of the head of the Government." There is no matter for surprise that the whole of Italy reposes this amount of confidence in Signor Mussolini and his ability to maintain the economic prosperity of the country as high as it is humanly possible to-day. For not only has he the sturdy qualities required of a practical administrator but he has that magnetism which inspires others with an unquestioning confidence in one's ability.

* * *

The result of this confidence is seen most clearly in the phenomenal stability of the external value of Italy's national currency. It is a matter of common knowledge that, when the Fascists came to power, they had inherited from the previous government a currency that was inordinately overvalued in relation to its internal purchasing power. But it was part of the Puritanical rigours of Fascist administration that relief should not be sought through a craven policy of devaluation. And the Fascists strove, might and main, to carry the weight of the overvalued currency ; and through a policy of rigorous reconstruction of foreign borrowing and expansion of the export trade of the country, a state has now been arrived at in which the external value of the lira easily maintains itself at a high level. While even the French franc, buttressed as it is by vast holdings of gold in the bank's vaults, is almost daily suspect of devaluation, the lira has been singularly free from bear raids. The Administration have repeatedly affirmed their intention to stick to the gold standard ; and what with this affirmation and the continued evidence of their ability to maintain the value of the currency, the lira has been almost an exception to the various national currencies of the world.

* * *

In the technique of maintaining the stability of currency, however, the world has little to learn from any one country. The Italian experiment is, therefore, more valuable on the side of internal economic organisation. The economic policy of Fascism is largely derived from its political theories and its political origins. The Fascists, who came to power as the result of determined *coup de etat* and have retained it ever since by methods, which are not strictly in accord with the accepted principles of modern democracy, had, perforce, had to evolve the idea of the Corporate State, which, in theory, makes concessions to the federalistic conception of society but would, in practice, take the sanctions of the Hegelian State. Just as in politics it has had little compunction in stamping out opposition ruthlessly, so in economics, it has asserted the right of the whole to direct and discipline economic activity in the interests of the nation in contradistinction to the interests of any one or more parts thereof. The fundamental thought underlying the Fascist economic theory is that the nation exists as the result of productive effort and that all productive effort must, therefore, be disciplined for the benefit of the whole, that is, the State. The practical manifestation of this idea is the "corporative movement" ; and it is used to

describe in general terms all the developments of Fascist social, economic and industrial policy. This policy has gone forward on the strength of the recognition that the State has the inalienable right to trample the opposition of all sectional interests to the pursuit of a comprehensive plan formulated by the Corporate State. Fascism claims to be free of partiality between the classes ; because it is ruthless in the application of force against strikes and lock-outs alike. The Charter of Labour concedes more of the claims of the working classes than any purely class domination would have afforded. Malcontents amongst the ranks of industrialists and financiers are dealt with, with equal severity. There have been cases of bankers who have been sent to jail for attempts to speculate in the currencies to the detriment of the financial interests of the nation. And latterly, the Fascist Government have carried farther their policy of controlling production in the interests of a balanced economy. It has been proclaimed from time to time that in certain specified industries, enlargement of plant or the erection of new factories cannot be undertaken except with the permission of the Fascist Government. All this only points to the truth that, once State regulation is on the move, there can be no drawing the line at which it should stop.

* * *

While these measures show clearly that the Fascist State has cut off its moorings from capitalism, it is yet to prove its capacity to steer clear of what it considers to be the rocks of socialism. It will be remembered that Fascism first came into prominence as a creed of belligerence against the socialists and the communists. And even if Signor Mussolini were to become a sincere convert to socialism, he would have to keep up his attitude of opposition to socialists for some time. After all the essence of socialism is the assertion of the right of the State to discipline economic life in the interests of the whole. Whether economic equality, such as socialists have preached, is practicable or not is yet to be seen. Encroachments on equality might, for aught we know, be as expedient for a future socialist government as encroachments on *laissez faire* and freedom of trade have proved to be for the anti-socialist governments of to-day. What matters now is the recognition that the choice between mankind is a choice between the end of civilisation and the end of *laissez faire*. Signor Mussolini has made the choice unhesitatingly. But he cannot claim any doctrinal identity or consistency for Fascism. In politics, Fascism asserts the prevalence of the strong arm, however wise. In economics, it stands for regulation. But there can be no strength except in the consent of the masses. And no regulation can go on for long, unless it be in the interests of the majority. And this is all that socialist democracy asks for. For the present Signor Mussolini has gained the support of the working classes, whom he had alienated by his denunciation of socialists and communists. There is also the widespread feeling that the Italian working man is better off than his confrere in many other countries. But these feelings wear off soon ; for there is staleness even in prosperity, more so in mere feelings of comparative prosperity. The moot problem of social organisation is not solved by alleviation of material distress.

* * *

All said and done, the achievement of Fascism in the sphere of economic development is one to be justly proud of. Its admirers can point to the series of measures culminating in the constitution of the Instituto di Ricostruzione Industriale to support their contention that in Italy individual uneconomic undertakings are being eliminated and their gradual liquidation ensured ; the remaining economically potential undertakings, or the new ones, are being carefully organized, and all the national forces coordinated and disciplined with a view to increasing the trade of the country and developing export markets against the time when the hoped-for economic revival begins.

* * *

In agriculture owing to the low state of previous development, the Government have been able to achieve much more. The health of the people has been improved by a campaign against the scourage of malaria. The reclamation of bogs and the extension of wheat acreage have redeemed the country's dependence on foreign nations for foodstuffs. New towns have been built up ; and the expansion of industry has been helped forward by developing the resources of the country in hydro-electric power. It is certain that many of the schemes of land reclamation would have been unthinkable if the Fascists had accepted the ideas of productivity preached by capitalist economics. They have had their due effect

on the national budget which shows a considerable deficit, according to Mr. Turner's Report. But Signor Jung contends that the deficit in a large measure represents the investment of the savings of the people in productive enterprise. If Fascism is not a capitalist ruse or decoy, it is an unconscious preparation for socialism.

U.S.A. & U.S.S.R.

A significant relief from the growing embitterment of international politics in recent times is afforded by the rapproachement between the United States and Soviet Russia. It is, indeed, natural that the United States should have taken so long to overcome the profound aversion for Bolshevik Russia and regard the question of diplomatic relation from a commonsense standpoint. For at the time of the Bolshevik Revolution and the establishment of the Soviet Republic, America was, as even now she is, the most successful capitalist nation in the world. She had little reason for even those faint feelings of insecurity, which Britain and France and Germany felt in regard to the stability of the economic organisation in which we live. To the American the rugged individualism which has now fallen into disfavour, had a peculiar appeal; and under its inspiration America had gone forward to heights of prosperity to which other nations yet remain perfect strangers. To such a country, the spectacle of an armed revolution and the establishment and maintenance by force of a system of social organisation, to which the whole world was alien, seemed an outrage on civilisation. All that America held dear was disowned by the Soviet Republic; and there was on the top of it all the telling argument that the Soviet Republic had repudiated all the obligations of Russia to foreign countries. It is no wonder, therefore, that the U.S. Secretary of State under President Wilson wrote as follows in regard to the question of diplomatic recognition and relations :

* * *

"We cannot recognise, hold official relations with, or give friendly reception to, the agents of a Government which is determined and bound to conspire against our institutions; whose diplomats will be the agitators of dangerous revolt; whose spokesmen say that they sign agreements with no intention of keeping them."

President Hoover, who showed no imagination in his dealing with the numberous problems which confronted him, was even more unimaginative on the Russian question and continued the policy that had been handed to him by his predecessors. Equally may it be said that the freshness of outlook and the all-pervasive commonsense, of which Mr. Roosevelt gave evidence even before he came into office, have enabled him to right the one grievous wrong which America had inflicted on Russia, and the world generally, by refusing to resume diplomatic relations with the Soviet. On May 16, President Roosevelt sent a letter to M. Kalinin inviting the latter to send a representative to Washington. President Roosevelt pointed out the absurdity of "the present abnormal relations between the 125,000,000 of population of the United States of America and the 160,000,000 of population of Russia by which these two great nations, between which a happy tradition of friendship advantageous to both sides existed for over a century, find themselves now without any practical method of direct intercourse with each other." Needless to say M. Kalinin accepted the invitation, on the ground that "the abnormal situation reflected in the general international situation is increasing the elements of unrest, complicating the process of strengthening the general peace and encouraging forces directed towards the revival of peace." For bringing the discussion to a successful end, the credit is due to M. Litvinoff, the Soviet Commissar for Foreign Affairs, who undertook the mission himself to Washington. The career and achievements of M. Litvinoff in the field of international politics are worthy of emulation by his confreres in the other governments of Europe. Even if one should discount, as is generally done, the activities and utterances of M. Litvinoff in the Disarmament and other international conferences as lacking in sincerity or practicality, one cannot forget how much he contributed to the termination of the economic hostilities between Britain and Russia. At the same time he paved the way for this consummation during his stay in London on the occasion of the World Economic Conference, he had also sown the seeds of that reconciliation between Russia and America which have now, happily, borne fruit. Now that two great nations so great and yet so much of strangers to the tortuous diplomacis of the European powers, are drawn together in mutual intercourse, is it too much to hope that the prospects of world peace will substantially improve from now?

THE READING ROOM

A Survey of the Marketing of Fruit in Poona by D. R. Gadgil and V. R. Gadgil: Published by the Gokhale Institute of Politics and Economics; Poona: pp. 184, Rs. 2-8.

The success of the recent experiments made in Bombay to export Indian mangoes to the London markets has brought the question of organised production and marketing of fruits to the fore-front. The present volume which is, therefore, of an extremely topical interest, is the third of a series of publications by the Gokhale Institute of Politics and Economics and is an attempt at a systematic study of the existing marketing organisation of the fruit industry in the district of Poona, which, as far as Western India is concerned, may be said to be the chief fruit-producing district. The material for the publication has been collected by experienced investigators sent out by the Institute and as such may be taken to be fairly indicative of the existing conditions of the trade. Of course, dealing as they had to, with agriculturists, commission agent and other occupants of the rural parts, where the level of education is very low and the general response to enquiries practically nil, the survey could not be as thorough and reliable as could be wished.

Even as it is the book gives the reader an idea of the utterly disorganised state of the trade. The lack of co-ordination between the producers; the absence of any information regarding wholesale prices; the not-very-honest dealings of the Dalals, Khotidars and other commission agents; the wide disparity between wholesale and retail prices—all these are fully brought out and these in turn bring out prominently the helpless state of the producers who are practically at the mercy of the commission agents for the marketing of their produce. An effective orgapisation among the fruit growers on the lines of the Bombay Presidency Fruit Growers' Association, but with increased membership and wider activity, which could deal with such matters as production control, improved quality of the produce and other similar matters; the formation of Bulking Societies to pool all the marketable produce from large as well as small growers, increased activity by the Agricultural Department in organising a band of grading inspectors to select and grade the different fruits; a systematised Statistics and Market Intelligence Service to be attached to every Municipal Market—these among others are some of the recommendations suggested by the authors for the betterment of the conditions of the fruit trade.

While mainly attempting at an organised marketing machinery, the question of marketing finance appears to have escaped the attention of the authors. It is only too well known that the chief disability of the Indian ryot is his indebtedness; and the case of the fruit Grower is by no means an exception. What the *mahajan* is to the agriculturist, the commission agents are to the fruit grower, a necessary evil. Any attempt at relief should, therefore, be first directed towards the producer. The co-operative societies in spite of their increase in the branches and extension of their activities, have either failed to meet the ryots in this respect or the latter have not fully utilised the services of the societies. Financing the organisation in all its stages of production and distribution will have to be arranged if the questionable activities of the middlemen are to be eliminated.

SOUTH INDIA

(From Our Correspondent)

Madras, November 21.

The meeting of the Sugar Committee at Coimbatore has helped, if nothing else, a realisation of the immediate problems and the future possibilities of the Indian sugar industry and the industries allied thereto. The meetings of the Committee were well attended, with Sir T. Vijayaraghavachariar the President of the Imperial Council of Agricultural Research in the Chair, and the Governments of provinces connected with sugar growing and Native States such as Baroda, adequatey represented. The scheme for an Imperial Sugar Research Institute was among the first to be taken up for discussion. Mr. Burt emphasised the readiness of the United Provinces Government to view with sympathy the proposals the Sugar Committee might put forward in this regard and the necessity for the Indian sugar industry of such an institute. The Directors of Agriculture, Madras and Bihar, stressed the need for an agricultural section for the proposed technological institute. It was then unanimously decided that the Harcourt Butler Technological Institute should be taken over and developed, the work being carried on independently of the Government of the United Provinces under the direct and exclusive control of the Research Council. The proposal that the institute should have an agricultural section received the warm support of the Committee. And it was decided that the Imperial Sugar cane breeding station should be part of the new institute. It would, thus, have an agricultural section for testing the milling qualities of cane by the authorities in co-operation with the provincial departments of agriculture. It is estimated that the institute will cost Rs. 13 lakhs and as at present planned will consist of research in Indian sugar factory problems and in sugar technology in general with special reference to Indian conditions. A fruitful line of research is the utilisation of the by-products of the sugar industry, which forms a separate field by itself. In addition the institute will also aim at the provision of scientific assistance to all factories which need it, the carrying out of extended tests on new varieties of cane under factory conditions, the collection and tabulation of scientific control, returns from factories, the issue of technical reports to factories on the results of the collection of the control data, constant critical study of the working of Indian sugar factories, a comparison of individual results with the best established Indian practice and the results obtained in other countries, demonstrations of new or improved plant or processes, training of students in all branches of sugar technology and short refresher courses for men already engaged in the industry.

The Committee rejected the proposal for setting up an entirely new All-India research and teaching institute.

The next proposal was in favour of the initiation of research into pests of sugar cane. And in the discussion on this question, Dr. McRea of Pusa pointed out that the location of the Research Institute at Pusa was attended by difficulties, like lack of housing accommodation for the staff, which would not be encountered if the Institute were located at some place in South India like Coimbatore, Poona or Bangalore. On the financial side, the scheme would cost about 7 lakhs; but the outlay could be spread over a quinquennial period. After some discussion the Committee accepted the report of the Sub-Committee on this question, but subject, of course, to the examination of details and the points which have been raised in the course of the debate.

The meeting of the committee on November 16 was taken with the consideration of a number of applications for grant from the provincial governments. Mr. D. R. Sethi, Director of Agriculture, Government of Bihar and Orissa, moved for a grant of Rs. 6,000 spread over a period of three years for a scheme of investigation into the possibilities of manufacturing **khandsari** sugar by the single pan. He pointed out that the contribution of the local government towards the manufacture of **khandsari** sugar, which was definitely of more than provincial importance, would consist of plant and the necessary quantity of sugar cane and the labour required for investigation.

The committee agreed to make the grant and thereafter Mr. S. V. Ramamurthi moved on behalf of the Madras Government for a grant of 45,000 spread over a period of five years for a scheme of research work on the chemistry of sugar. Mr. Ramamurthi urged that in the absence of such research work there was the possibility of the development of the Indian sugar industry becoming altogether lopsided. And in this he was strengthened by Mr. Burt who suggested that the study of chemical side of sorghum hybrids is best made in the place of their origin. Mr. Burt took the view that as the scheme was rather expensive, no one provincial government could be expected to shoulder the responsibility all by itself, and that it was for the Sugar Committee to make the start and secure by negotiation the best help that the Madras Government could offer in the matter.

It was left to Mr. Srivastava, Sugar Technologist to the Imperial Council of Agricultural Research, to bring forward his proposal for an Indian Sugar Trade Information Service devoted to the Indian industry and the Indian markets. This scheme, which involves an expenditure of Rs. 30,806 in five years, was intended to supplement the sugar cable service which now gives information about the foreign markets. After sanctioning this scheme, the Committee passed on to record the resolution of the United Provinces Board of Industries relating to the starting of co-operative societies to encourage the cultivation and sale of sugarcane manufacture and the sale of gur, rab and sugar by small open factories and the manufacture and sale of sugar by modern factories and the setting up of state-aided factories for the disposal of molasses, for the manufacture of petrol, alcohol and motor fuel.

By far the most important subject discussed in the Sugar Committee from the standpoint of future development is the utilisation of molasses for the manufacture of power alcohol. In this matter the Sub-Committee scheme was adopted in full. The Sub-Committee thought that the more important step was to carry out experiments in the marketing and distribution of power alcohol for domestic use with petrol as motor fuel. In the opinion of the committee, it should be possible for power alcohol to be produced under the most favourable conditions at somewhere between 6 and 8 annas. Experiments in this regard can be conducted only in a limited area, where the offtake for a period of 10 years would be guaranteed by Government. For it is only on the strength of such guarantee that commercial firms would be prepared to put up the necessary special distilling plant; but such guarantees cannot be given unless the requisite legislation is passed before hand.

Another by-product, which could be developed, is paper, to be manufactured from sugar cane begasse which is the dry refuse of sugar cane after the juice has been expressed. And it is used as fuel fertiliser and in some places as stock for making paper.

Clive Street Gossip

After three weeks' stay in Delhi, I was glad to be back in good old Calcutta. During all the time I was in the Headquarters of the Government, I was constantly harassed by the thought whether all the time, energy and money spent in so prolonged a stay was really worth the while. This Reserve Bank business has come to exercise a tyrannical influence over me. In 1927-28, too, I appointed myself a kind of honorary non-official adviser. I should have then undertaken at least half a dozen trips to Simla and Delhi and expenditure far beyond my slender capacity. .It was through my efforts that a compromise in the nature of the Stockholders' Scheme was devised by Mr. S. Srinivasa Iyengar, Leader of the Opposition, and endorsed by Sir Basil Blackett, the Leader of the House. It was at my instance that, when, at this stage the Secretary of State gave sharp and curt orders for the withdrawal of the Bill, Dewan Chaman Lall moved the adjournment motion which caused "mixed feeling" in Sir Basil. A compromise was not only in sight; but had practically been agreed on. The Secretary of State butted in and chaos was the result. The subsequent history was one in which I could play no useful part. The Opposition side had got embittered over the Simon Commission episode. And the Reserve Bank Bill was wrecked on the rock of prejudice, rancour and conflicting politics.

* * *

When the Bill was subsequently withdrawn in the Spring of 1928, Mr. Jamnadas Mehta shot up from his seat and *audibly* and *vociferously* heaved a sigh of relief. I did not. My heart went out to Sir Basil. In the concluding part of his speech, the Finance Member, in his characteristic style, declared that when elders threw about valuable china, well, someone had to pay. The country, as it knows now, has paid dearly for the wanton gambols of 1927-28. The concessions, which Sir Basil had then agreed to, appear all the more valuable in comparison with the truculence and intransigence on the present occasion. I, for one, would be content to-day with a Bill embodying the points which Sir Basil had conceded. The minimum on which our legislators should insist is that the starting point should at least be the one where Sir Basil had left matters.

* * *

Again, I found myself, last September, in Simla at the time of the introduction of the Reserve Bank Bill. I was drawn to Delhi for the Select Committe stage. Why am I, one who has no official or other connection with the Bill and one who, by his position as Managing Editor of a financial paper, can have nothing to do in any capacity with the Reserve Bank when it comes into being, bothering myself as I do over the destiny of this piece of legislation? What is the Reserve Bank Bill to me? And what am I to the Reserve Bank Bill? These queries have been torturing me all the time. I have spent valuable time (over which the Editor grouses) and valuable money (over which my bankers get restive). And what is the laudable purpose of all this! And what earthly use can there be? A cynical friend suggested that I might have something up my sleeve. Perhaps, I have an eye on some fat job? Deputy Governorship or what? No, thank you. I am happy as I am. I so value the association with this paper, I am so proud of it, it is so much part of my life, being and happiness, that I would not forsake its Managing Editorship for the Managing Governorship of a thrice-puissant Reserve Bank! *Indian Finance* is my work, my mission, my first and last love; and there can be no other work or service for me.

* * *

The question remains still unanswered: What is all this bother of mine on the Reserve Bank due to? If I am asked what will confer Swaraj on India, I shall say that a well-conceived, well-planned and well-functioning central banking institution shall confer Swaraj. Conversely, an ugly, ill-fitting, ill-fashioned contraption of a central bank will only result in the reforging of the financial fetters in a way that we can never get free of them at any time. I stand for the ideal central bank as the core and centre, the fountain and inspiration, of national economy. And I have done all I could, and am doing all I can, to persuade our legislators to plan the scheme on lines which would fully subserve national interests. I am a self-constituted propagandist for a model Central Bank. Sir Basil recognised it and sought my co-operation when he was up against the India Office. Sir George is, however, in a tactically stronger position. He is too suave to take an aggressive stand against the Secretary of State. The Central Legislature as it is now constituted is too suave to take a determined attitude against the Finance Member. We had a strong Finance Minister, a strong Opposition and a strong Secretary of State in 1927-28. The first two were powerless in the face of the Grand Moghul; and a measure agreed to between the former was smashed by the latter. We have now an accommodating Finance Member, an accommodating Assembly and a strong Secretary of State. We have, therefore, a Bill drawn up on the inexorable commands of the Moghul; and we shall see that it is sponsored by a persuasive Finance Member and passed as it is by an obliging House.

* * *

Which reminds me of a story. Once upon a time there was a king who ordered that each householder should, each day, bring into the State one seer of rice (grain, with husk removed) and take in return one seer of unhusked paddy. The population of the country were very dissatisfied, as one may

guess. The king died; and his son ascended the throne. He ordered that each householder should bring in one seer of unhusked paddy and receive in return one seer of husk. The population exclaimed how full of the milk of human kindness was the king that died. The Bill which Sir George Schuster asks us to accept is husk—mere husk—nothing but husk.

* * *

It must be obvious that with the comfortable majority which Sir George has in the House, he need not and and would not agree to a single amendment put forward by the Opposition on the lines of the Minutes of Dissent.

* * *

It is a curious paradox that Sir Cowasjee Jehangir, the Leader of the Opposition, finds himself in agreement with the views of the Government members and unable to append his signature to the main or any other important minute of dissent. One would have expected that the Leader of the Opposition would have been the first among the signatories to the dissenting minutes. Except for one or two minor points, Sir Cowasjee Jehangir gives his full adherence to Sir George Schuster. On the question of the ratio, he has now given up his "overnight" stunt and declares that "the ratio should be the *de jure* rate of the day before the Act comes into force." Is Sir Cowasjee aware that India has to-day no *de jure* ratio? According to the strict statutory position, we have only a lower point. The Currency Act of 1927 was suspended by the Ordinance issued on September 21, 1931. This ordinance was cancelled by an ordinance issued later in the week. The result is, the law now in force is the Currency Act of 1927. For any specified par of exchange, there should be an upper point and a lower point. A country could be said to have a *de jure* rate only when the law fixes the upper point (that is, the rate at which the currency authority should purchase gold or gold exchange or exchange of a specified foreign country) and a lower point (that is, the rate at which the currency authority should be under obligation to sell gold or gold exchange or exchange of a foreign country as the case may be).

* * *

According to the Currency Act of 1927, the Government are under obligation to sell gold, or sterling at the equivalent rate of 1s. 5 49/64d., the Government having the option to decide whether they should sell gold or sterling. The option in regard to gold disappeared the moment the rupee was unlinked from gold. There is, therefore, a statutory obligation to sell sterling at 1s. 5 49/64d. So far as the obligation to buy is concerned, the Currency Act of 1927 does not impose any obligation to buy sterling. The Government are now to buy gold at Rs. 21-3-10 per tola. From the time the rupee was divorced from gold, it may be said that the Currency Act contains no provision in regard to the upper point. In the strictly legal sense, there is, therefore, only the lower point and there is no upper point. But the endeavours of the Government have been directed towards maintaining exchange below 1s. 6 3/16d. Sir Cowasjee Jehangir is, therefore, making a confusion when he refers to the *de jure* rate of the day before the Act comes into force. There is only a *de facto* rate. A mistake of this kind either shows ignorance or a slipshod nature. Neither trait is satisfactory from the point of view of the responsibility that is involved in a discussion of so weighty a question as the Reserve Bank proposal.

* * *

In London Sir George had colleagues with a plastic outlook. In the Assembly he is assured of smooth sailing for his Bill. In the Select Committee, he could count on a comfortable majority. Where, then, is the use for a propagandist urging a model Central Bank? Is it not sheer waste of breath? Is it not a case of love's labour lost. Commonsense and prudence should have suggested the futility of any brave endeavour to organise the opposition to a well-entrenched Government. Where is the sense in knocking one's head against the wall? The main purpose of the efforts put up is, I believe, that it should not be possible for the Finance Member to claim that his shoddy plan has the universal support of the country. Up to the beginning of the Select Committee, he could, with some measure of justification, claim that the Government proposals had received the more or less unanimous approval of the members who sat on the London Committee. It is true that in one or two places, the London Committee report contains observations to the effect that this member or that has not agreed on a particular point. But the essential fact is that the report as such was signed by all the members wihout anyone of them appending a Minute of Dissent. Sir Purshottamdas Thakurdas has been distributing printed copies of "Notes on the Minutes of Dissent". Only when there are Minutes of Dissent can there be Notes on Minutes of Dissent.

* * *

As has been already stated, the posthumous notes of Sir Purshottamdas are futile, meaningless, purposeless, unconvincing and beside the point. He is one of the stalwarts who put up a fight for a lower ratio and for a State Bank in 1927-28. He was a member of the Joint Select Committee which passed the State Bank proposal by a majority. He was a member of the Assembly which unanimously passed section 4 of the Joint Select Committee Bill thereby ratifying the proposal of a State Bank so far as the Assembly was concerned. He was a member and Vice-President of the Central Banking Equiry Committee which unanimously recommended a State Bank. Two other colleagues of his on the London Committee were also associated with the Joint Select Committee and the Assembly of 1927-28. The country had every right to expect that these gentlemen should take the public into their confidence and give convincing reasons as to why they unceremoniously threw overboard a proposal which one or all of them had supported steadfastly and vigorously in the earlier stages. It was to me a great shock that the Parliamentary Paper embodying the report of the London Committee could be put forward by Sir George as an unanimous document. No one would have liked a like tragdy to happen in the case of the Joint Select Committee report. The voice of protest must be heard; and the views of those who protest must be put on record; and whether the protest came from a few or from many did not matter; the point was that Sir George be prevented from claiming for his Bill the universal support of the varied sections and interests. Is it not a glorious achievement that while a committee in which a veteran fighter like Sir Purshottamdas was a member lodged no protest against the reactionary proposals of the Government, twelve men of the Joint Select Committee elected from an Assembly which is but a pale and ineffectual imitation of the 1927-28 body have appended their signatures to Minutes of Dissent in which are stated their points of view with force and strength and cogency.

* * *

If there had been more team work, it might have been possible for the Select Committee even to have

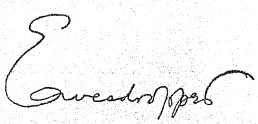
inflicted a defeat on the Government on a vital point. The clauses pertaining to the purchase and sale of sterling at specified rates were carried through by Sir George Schuster, fourteen voting for him and twelve against. Of the fourteen, one was Sir Homi Mehta who, a few days prior to voting, said as follows in a Currency League Meeting: "All that is needed is to encourage confidence in the people in regard to the stability of the rupee, and that can only be done by first strengthening the economic position of the country by *devaluating* it in terms of sterling and then to leave it alone to determine its own natural value in the field of international finance". Is it not curious that Sir Homi put up his hand for eighteenpence in the Committee? The Hon'ble Mr. Basu is, I believe, repentant that he voted as he did on the ratio question. On his return to Calcutta, he should have realised that he was mistaken in attaching undue importance to a sectional propaganda carried on for eighteenpence ratio in Bengal. Viewed from the standpoint of any province or any interest, there can be no case whatsoever for the present ratio. Sentiment and reason alike cry against an unnatural exchange. Prejudice and mischief may prop up a case for the ratio which is itself bolstered by so adventitious a factor as gold exports. But when one analyses all the arguments advanced by the upholders of the present *regime*, it would be found that they are without foundation.

If Sir Homi had voted as rightly in the committee as he spoke sturdily in the Currency League meeting, and if Mr. Basu had thought as calmly and dispassionately in Delhi as he has since then, the motion of Sir George would have been defeated by 15 to 11. The Opposition missed victory by the barest of flukes favouring Sir George. We may, however, console ourselves that it is better to have fought and lost than never to have fought at all.

* * *

Two banking institutions hailing from Comilla performed the opening of their new premises in Calcutta during the current week. Sir Nripen Sarker and Mr. Nalini Ranjan Sarker officiated at the two functions respectively. It is a sore point with Bengalees that they do not yet have a first-rate bank of their own in the Presidency. The Bengal Central Bank is now a member of the Calcutta Clearing House and has attained thereby a certain status. The two Comilla institutions have started on a programme of expansion. I feel sure that those in charge of these banks have a full realisation of the responsibility that lies on them, especially as it is up to them to prove that they will keep themselves miles away from the lapses and defects which brought the Bengal National Bank to ruin. While the management has thus a grave responsibility, the public have an equal responsibility in doing all that they can to strengthen the hands of these institutions in their endeavour to demonstrate that Bengalee talent is fully equal to the working and conducting of a Bank on modern lines. In every enterprise which underlines and emphasises the economic aspirations of Bengal, we must needs extend a measure of special and understanding sympathy. If the Bengalee feels that he has had but little share in the wealth of the province, he is justified in being somewhat sore on this point. We should do all we can to make him feel that he will get every encouragement in the endeavours to make up for the leeway. It is in this spirit that I wish the two ventures of Comilla an abounding measure of progress, prosperity and success.



OLYMPUS

(*From Our Correspondent*)

New Delhi, November 22.

Manouverings for Reserve Bank Session: *ad hoc* Opposition specially for this Bill: Bengal "leaders" and the ratio: Sparing of speech but Versatile of writing: Silver Agreement: Taciturn Japan:

The special session of the Reserve Bank Bill commenced on Monday. The Select Committee reports were presented by Sir George Schuster; but no printed copies were available to the members or to the press. The central report prepared by the Government members was ready last mid-week. But the various minority reports were received only by Saturday noon. The documents run to 32 pages of printed matter; and it was not possible to get them ready in time for Monday's meeting of the Assembly.

* * *

According to rules, the papers have to be laid on the table for a week before the discussion can start. The Bill will, therefore, come up for consideration next Monday. One whole week might be taken up by the speeches of members. There is no time limit to the speeches in connection with a Bill; and I understand that quite a few of the members would take at least three hours. The second week of this session would, therefore, be a carnival of speech-making.

* * *

From the third week will start the discussion on amendments. There is bound to be a plentiful crop of amendments. Again, speeches *galore*. It is doubtful if the Assembly session will conclude in time for the opening of the Council of State on December 14.

* * *

If the Bill does not pass the Assembly by December 12, and drags on to the following week, it might well mean that the Council of State would have either to rush through the Bill within two or three days before the Christmas holidays to take it up more leisurely early in the New Year.

* * *

The Opposition feels considerably bucked up by the fact that while in the London Committee, the report was unaccompanied by any Minutes of Dissent, the Joint Select Committee has resulted in twelve members differing from the Government and signing important and comprehensive Minutes of Dissent. The total number of members in the Select Committee was 28. One or two were absent; two were Government members. It may be said that barring these cases, the Select Committee was 24 strong. The Minority Report is, therefore, signed by half of this number. The Assembly feels quite jubilant on a feat of this nature.

* * *

At the time of writing, strong canvassing is going on with a view to form a united opposition for the Reserve Bank Bill. It was mentioned about three weeks ago in the columns of *Indian Finance*. There are some vested interests which are offering resistance to this idea. All the same, there is every chance of an *ad hoc* opposition being formed of 30 to 35 members.

* * *

So far as voting strength is concerned, the Government are on perfectly safe ground. The

opposition cannot win on any point as against the Government. Nevertheless, the formation of a special opposition and the fact of such an opposition acting in perfect unison should make a powerful demonstration and create a striking impression on the minds of the people at home and abroad.

* * *

Once there is an opposition of this kind and this strength, Sir George Schuster would not be able to feel complacent about the support which he is bound to receive from official benches, the usual satellites and some members of the Opposition benches who feel bound to stand by the London proposals.

* * *

Sir Basil Blackett had no qualms about carrying through his ratio by a narrow majority of two votes. But as regards the Reserve Bank, he was keen and earnest in appealing for the largest measure of support. He did not want to carry out the Reserve Bank proposal by brute strength. If an opposition is formed on the lines now proposed, it will be a final and convincing demonstration that Sir George is relying on his strategic advantage and not on popular support.

* * *

While it will be true to say that the non-official members may be able to secure a majority on the ratio question if this were brought up on its own merits, it is quite likely that a good few would swallow the sugar—coated pill of Sir George Schuster. The sugar-coated pill is, that while Sir George has every sympathy for the views of those members who differ from him on the ratio, he would urge them to consider whether a question which is subsidiary to the Reserve Bank need be raised in a manner that would wreck the Reserve Bank.

* * *

On the question of the ratio, much has been made by the official members of the opinion expressed by Bengalee leaders, at least persons who claim to be leaders. Sir P. C. Ray, an admitted authority in Chemistry, has now started dabbling in economics and seeks to lay the law on the question of the ratio. He gave apt aid to Sir George in an awkward situation. Here is Bengal which opposes a lower ratio, argues the Finance Member.

* * *

Another Bengalee whose opinion has been broadcasted is Mr. Jadunath Roy. This gentleman is reported to have been innocent of one single question to any of the witnesses during his membership on the Central Banking Enquiry Committee. He is, perhaps, a sparing speaker but a versatile writer. Anyway, people cannot be blamed if they argue that he has allowed himself to be a tool in the hands of those who are, for their own reasons, organising a propaganda against the advocates of the lower ratio.

* * *

Mr. Nalini Ranjan Sarker has given a crushing reply to Sir P. C. Ray. Mr. Sarker is one of the favourites of Sir George. But the latter has not cared to quote his favourite friend on the topic of the ratio.

* * *

The Assembly in the current week has to put up with what might be called enforced idleness. But the Government have been in no mood to pay Rs. 20 a day and leave them without work. A number of miscellaneous matters is being discussed in the interregnum. Amongst such matters, the Silver Agreement is by far the most important. The following resolution was moved by Sir George and accepted unanimously by the House after discussion :

> "This Assembly recommends to the Governor-General in Council that he do ratify the Memorandum of Heads of Agreement entered into by the Delegates of India, China and Spain as holders of large stocks or users of silver, and of Australia, Canada, the United States, Mexico and and Peru as principal producers of silver, at the Monetary and Economic Conference held in London, July, 1933."

Sir George put forward modest claims in favour of this agreement.

* * *

The Finance Member said that it was not a very large achievement but still it was really significant as a token of international co-operation. He hoped, in particular, that it might help to promote good understanding with the United States. The Agreement will, Sir George claims, remove unnatural and accidental factors which were operating to depress the price of silver. It neutralises the effects of putting back on the world markets accidental accumulations of the Government of India's stocks of silver. It creates a healthy position in which the market is relieved of the uncertainty of Indian Government stocks hanging over the market.

* * *

At the same time, Sir George uttered a warning lest people should expect too much of the Agreement. He said : "I think it will stabilise the position and remove the chance of further collapse but as to any real or lasting improvement in the silver position that can only be brought about by general improvement in the world's trade".

* * *

In emphasising this caution, Sir George made an examination of India's own position. He gave the following figures :

> "Taking the five years from 1925 to 1930 and allowing for Government sales, India as a whole during that period absorbed on balance an average quantity of ninety-two million ounces of silver annually from the world's supplies. On the other hand, in the last financial year (1932-33), the import on private account had practically ceased and allowing for Government sales, India as a whole not only did not absorb any silver but actually put back eighteen million ounces of silver on to the world's market. There has thus been a change over of a hundred and ten million ounces per annum in India's relations with the silver market. As the world's annual production has never been more than about 200 million ounces since the War and is now only about 150 million ounces, the enormous significance of the change in India's position is brought out."

Japan has kept tantalising us for over two months. Any moment, the final agreement may be announced as ready. Meantime, newspaper reporters keep making daily pilgrimage to the Maiden's Hotel where are foregathered the Japanese delegates. They are a cute crowd. Reticent mostly, but loquacious when it suits them.

HILL-BIRD.

ECONOMIC EXPERIMENTATION

A PLEA FOR AN OPEN MIND

To the historian of the future, the present will most probably appear as the period of economic experimentation. But it is necessary to recognise that there was no experimentation as such in the past. In the primitive stages, economic activity is instinctive, rather than volitional; and even when human society attained to a stage in which man had some claim to having been civilised, there was little recognition of the capacity of society as such to transform appreciably the economic fortunes and wellbeing of the individuals. The theory of economics was a late development in human history. And when it assumed a form, in which it could be called a body of definite knowledge, it was rather a study of natural trends and tendencies, than an exploration of the possibility of consciously transforming the economic state of affairs in accordance with a premeditated end. The Mercantalists of the Middle Ages were victims of crude notions, which could little help either a normal or a formative study of economics. It is unfortunate that the real development in the science of economics should have taken place during a time, in which economists suffered a violent reaction from the leading ideas of Medieval Mercantilism. For the reaction meant that economists were powerless to check the violent swing of the pendulum from the crudely protectionist ideas of the Middle Ages to the advocacy of a grossly extreme form of *laissez faire* individualism. The result was that the fatalism, which held economics in its grip for ages, came to acquire a scientific and philosophic justification, which has acted as a deadweight on economic thought till but yesterday. I am pointing this out at length only to show that in the conditions and opinions that prevailed in the past, there could possibly be no spirit of experimentation in the sphere of economy.

Meaning of Experimentation

Let me now explain what I mean by economic experimentation. We are all experimenters in the sphere of our own individual economies trying to change aims and means as often as we like or may be necessary. It is not in that sense that I am talking of economic experimentation. What I mean really is the freedom from the established dogmas of traditional and classical economics, together with the readiness to follow new paths. In this sense, neither the Mercantilists nor the absolute free traders could possibly be the authors of any experiment. For both were equally dogmatic about the correctness of their views. It, therefore, follows that the first experimenter in economics is the protectionist of the 19th century, who was prepared to grant the core of truth in the doctrines of free trade, but who none-the-less was prepared to recognise that by his own effort he could achieve ends, which in the automatic course of affairs would either not be fulfilled at all, or would take an unconscionably long time to fulfil. And if I may anticipate something of what I shall have to say at greater length later on, I may point out that we owe the era of economic experimentation directly to the protectionists all over the world. For it is because of their activities that the present depression with its peculiarly deadlock character has been brought about. But for the depression, which seems to militate against all current doctrines with equal strength, there would not be that freedom from established dogma and readiness for exploration, which I consider to be the essence of scientific experiment.

Depression destroys Dogmas

In both these directions, the depression has helped mankind forward a long way. The one calls for changes in the views and outlook of academic economists. The other condition is satisfied, only when it becomes expedient for the economic governments of the world to confess that they are not in certain posession of economic panaceas, and that it is necessary to proceed warily in respect of economic policy, discarding paths that are found to be misleading and persisting in measures of demonstrable usefulness.

So far as economists are concerned, it is a mistake to suppose that the present depression or any other phenomenon that might occur in the future will have the effect of denying the truth of economic laws or stigmatising all economists as people who knew nothing of what they were talking about. What the depression has done, hawever, is to open the eyes of economists to the fact that the policies we have pursued, the doctrines we have preached and the zeal with which we have criticised rival views, have so little sanction in what we have regarded as the laws of economics. The laws are true; substantially true. The deductions that we have made therefrom, the sanctions that we have sought, in other words, their validity under given conditions, their applicability or reliability, our ideas in this regard, the depression has shown to be tremendously faulty. Economics taught us, by suggestion, let it be remembered, rather than explicitly, that we could rely on the forces of economic equilibrium to adust themselves; that a depression called for nothing more than patient waiting, that overproduction can never reach the point at which the wheels of trade and exchange could get so jammed as to be for ever inextricable. We did not foresee the conditions in which the ordinary measures of economy like balanced budget, reduced wages and the like, far from helping us towards recovery, would only aggravate the disequilibrium between poduction and consumption. In other words, scientific and industrial development has taken economics by surprise. It has remained the economics of scarcity; and though the truth of its laws is unaffected, its doctrines intended for actual practice, have lost a substantial part of their validity. Even in its theoretical side, our eyes are opened to the crudity of some of the basic concepts.—I might afford the instance, which comes to my mind first, of the idea of the purchasing power of money, which for all practical purposes has been blown up into thin air by Mr. Keynes in his *Treatise on Money*.

By far the most important in the orientation of economic ideas is the change in the attitude of economists to the notion of economic equality. Except among the most clear-sighted of economists, there was little recognition of the fact that economists as such could have little to say about the issues connected with individualism *versus* socialism. The response of an individual to fixed rewards is a purely psychological question. Whether society would prefer the stability of livelihood to the possibility of multiplication of material wealth, which individualism promises, is entirely the choice of the members of each community. Only so late in the day do we meet with Prof. Lionel Robbins of London recognising that economics deals with the relation of scarce means to ends and has little to do with the choice of ends itself, which is a matter for the community or the individual concerned.

opposition cannot win on any point as against the Government. Nevertheless, the formation of a special opposition and the fact of such an opposition acting in perfect unison should make a powerful demonstration and create a striking impression on the minds of the people at home and abroad.

* * *

Once there is an opposition of this kind and this strength, Sir George Schuster would not be able to feel complacent about the support which he is bound to receive from official benches, the usual satellites and some members of the Opposition benches who feel bound to stand by the London proposals.

* * *

Sir Basil Blackett had no qualms about carrying through his ratio by a narrow majority of two votes. But as regards the Reserve Bank, he was keen and earnest in appealing for the largest measure of support. He did not want to carry out the Reserve Bank proposal by brute strength. If an opposition is formed on the lines now proposed, it will be a final and convincing demonstration that Sir George is relying on his strategic advantage and not on popular support.

* * *

While it will be true to say that the non-official members may be able to secure a majority on the ratio question if this were brought up on its own merits, it is quite likely that a good few would swallow the sugar—coated pill of Sir George Schuster. The sugar-coated pill is, that while Sir George has every sympathy for the views of those members who differ from him on the ratio, he would urge them to consider whether a question which is subsidiary to the Reserve Bank need be raised in a manner that would wreck the Reserve Bank.

* * *

On the question of the ratio, much has been made by the official members of the opinion expressed by Bengalee leaders, at least persons who claim to be leaders. Sir P. C. Ray, an admitted authority in Chemistry, has now started dabbling in economics and seeks to lay the law on the question of the ratio. He gave apt aid to Sir George in an awkward situation. ECONOMIC EXPERIMENTATION

A PLEA FOR AN OPEN MIND

To the historian of the future, the present will most probably appear as the period of economic experimentation. But it is necessary to recognise that there was no experimentation as such in the past. In the primitive stages, economic activity is instinctive, rather than volitional; and even when human society attained to a stage in which man had some claim to having been civilised, there was little recognition of the capacity of society as such to transform appreciably the economic fortunes and wellbeing of the individuals. The theory of economics was a late development in human history. And when it assumed a form, in which it could be called a body of definite knowledge, it was rather a study of natural trends and tendencies, than an exploration of the possibility of consciously transforming the economic state of affairs in accordance with a premeditated end. The Mercantalists of the Middle Ages were victims of crude notions, which could little help either a normal or a formative study of economics. It is unfortunate that the real development in the science of economics should have taken place during a time, in which economists suffered a violent reaction from the leading ideas of Medieval Mercantilism. For the reaction meant that economists were powerless to check the violent swing of the pendulum from the crudely protectionist ideas of the Middle Ages to the advocacy of a grossly extreme form of *laissez faire* individualism. The result was that the fatalism, which held economics in its grip for ages, came to acquire a scientific and philosophic justification, which has acted as a deadweight on economic thought till but yesterday. I am pointing this out at length only to show that in the conditions and opinions that prevailed in the past, there could possibly be no spirit of experimentation in the sphere of economy.

Meaning of Experimentation

Let me now explain what I mean by economic experimentation. We are all experimenters in the sphere of our own individual economies trying to change aims and means as often as we like or may be necessary. It is not in that sense that I am talking of economic experimentation. What I mean really is the freedom from the established dogmas of traditional and classical economics, together with the readiness to follow new paths. In this sense, neither the Mercantilists nor the absolute free traders could possibly be the authors of any experiment. For both were equally dogmatic about the correctness of their views. It, therefore, follows that the first experimenter in economics is the protectionist of the 19th century, who was prepared to grant the core of truth in the doctrines of free trade, but who none-the-less was prepared to recognise that by his own effort he could achieve ends, which in the automatic course of affairs would either not be fulfilled at all, or would take an unconscionably long time to fulfil. And if I may anticipate something of what I shall have to say at greater length later on, I may point out that we owe the era of economic experimentation directly to the protectionists all over the world. For it is because of their activities that the present depression with its peculiarly deadlock character has been brought about. But for the depression, which seems to militate against all current doctrines with equal strength, there would not be that freedom from established dogma and readiness for exploration, which I consider to be the essence of scientific experiment.

Depression destroys Dogmas

In both these directions, the depression has helped mankind forward a long way. The one calls for changes in the views and outlook of academic economists. The other condition is satisfied, only when it becomes expedient for the economic governments of the world to confess that they are not in certain posession of economic panaceas, and that it is necessary to proceed warily in respect of economic policy, discarding paths that are found to be misleading and persisting in measures of demonstrable usefulness.

So far as economists are concerned, it is a mistake to suppose that the present depression or any other phenomenon that might occur in the future will have the effect of denying the truth of economic laws or stigmatising all economists as people who knew nothing of what they were talking about. What the depression has done, however, is to open the eyes of economists to the fact that the policies we have pursued, the doctrines we have preached and the zeal with which we have criticised rival views, have so little sanction in what we have regarded as the laws of economics. The laws are true; substantially true. The deductions that we have made therefrom, the sanctions that we have sought, in other words, their validity under given conditions, their applicability or reliability, our ideas in this regard, the depression has shown to be tremendously faulty. Economics taught us, by suggestion, let it be remembered, rather than explicitly, that we could rely on the forces of economic equilibrium to adust themselves; that a depression called for nothing more than patient waiting, that overproduction can never reach the point at which the wheels of trade and exchange could get so jammed as to be for ever inextricable. We did not foresee the conditions in which the ordinary measures of economy like balanced budget, reduced wages and the like, far from helping us towards recovery, would only aggravate the disequilibrium between poduction and consumption. In other words, scientific and industrial development has taken economics by surprise. It has remained the economics of scarcity; and though the truth of its laws is unaffected, its doctrines intended for actual practice, have lost a substantial part of their validity. Even in its theoretical side, our eyes are opened to the crudity of some of the basic concepts.—I might afford the instance, which comes to my mind first, of the idea of the purchasing power of money, which for all practical purposes has been blown up into thin air by Mr. Keynes in his *Treatise on Money*.

By far the most important in the orientation of economic ideas is the change in the attitude of economists to the notion of economic equality. Except among the most clear-sighted of economists, there was little recognition of the fact that economists as such could have little to say about the issues connected with individualism *versus* socialism. The response of an individual to fixed rewards is a purely psychological question. Whether society would prefer the stability of livelihood to the possibility of multiplication of material wealth, which individualism promises, is entirely the choice of the members of each community. Only so late in the day do we meet with Prof. Lionel Robbins of London recognising that economics deals with the relation of scarce means to ends and has little to do with the choice of ends itself, which is a matter for the community or the individual concerned.

Let me now turn to a more practical issue. It was assumed that the price any one generation has to pay for the joltings of an individualistic regime is nothing compared to the illimitable increase in wealth which individualism promises. But these comparative values do not affect the attitude of the ordinary man to his sufferings of the present. He cannot be expected to take comfort in the immense progress that is in the womb of time. He is impatient; he prefers the bird in the hand. And when he finds that even on the theoretical side, the self-adjusting qualities of an individualist economy are not working as efficiently as the equilibrium economics has taught us to believe there is a readiness to explore the possibilities of economic equality which is so largely a condition of planned economy. All the smug assumtions, which made economic equality seem a just and natural dispensation, are again called in question; and because the political power of the masses has been on the increase, each government *has* to cut new ground in economic policy.

Necessity for Experiment

So much for theory and opinion. On the practical side, the conditions that have been brought about by the depression are such that all old dogmas and the old spirit of cocksureness have had to be abandoned. The only chance that is still left us for avoiding the necessity of exploring new paths is that of the restoration of the old order of international free trade. Many there are, who still profess the faith that, if the nations can be brought to restore, and observe faithfully, the rules of the international gold standard, with its emphasis on free trade and mobility of price levels, the world will have solved its monetary and economic problems. I have hardly the space, nor would it be strictly relevant, to attempt to show that such faith is not based on reason. But I may say that it was the regime of nineteenth century free trade, with its unequal distribution of the bounties of nature between the industrial and the agricultural nations, that contained the germ of the present depression. And what reason have we to believe that, if that regime were restored, the same lop-sided economic development will not occur again, with the inevitable gravitation to a crisis similar to the present?

Apart from this, the restoration of international free trade is happily not practical politics today. The nations of the world have gone so far on the lines of protectionism and sheltered industry that they cannot revert to the old regime without the risk of the gravest dislocation in their national economies. No nation is prepared to run the risk; and the World Economic Conference, which met to revive international trade, has in reality ended with sounding its death-knell.

Thus each nation is thrown on its resources. And the conditions that obtain within each country are that no party can claim to possess as I said, the economic panacea. Every nation has, so to say, to choose its resting place half way between the two equally impracticable extremes of international free trade and absolute economic self-sufficiency. This is, perhaps, best explained in terms of Great Britain and the United States, the one representing the maximum dependence on foreign trade and the other the maximum of economic self-sufficiency. And yet both are obliged to find a mid-point. Great Britain as you all know, has a population which is larger than its agriculture can support. The foodstuffs are imported and paid for by exports of manufactured articles; and if we recognise that the raw materials are imported, even like the foodstuffs, and both are paid for by visible and invisible exports you realise how difficult it is for Great Britain to remain self-sufficient. And yet international free trade is a forlorn cause. For the United States, though her foreign trade is but a small percentage of her total trade, the repercussions of the loss of foreign trade cause a dislocation in the internal economy which has to be seriously reckoned with. Both countries are, therefore, equally unable to chalk out a definite policy; and the method has to be one of a wary approach, rather than a kind of Cæsarian campaign.

I may at this stage say a word or two about the economic policy of Great Britain, as it would not fit in with the trend of my later discussion. As is well-known, Great Britain's interests are on the side of the restoration of the old order of international trade and finance; and that is why she was most enthusiastic about the professed aims of the World Economic Conference. But the trend of world economy is, assuredly, away from it, and it is not in the power of any one nation to achieve the restoration. Great Britain is not a nation which can aim at self-sufficiency without a serious reduction in the standard of living. Hence Britain has chosen a *via media* of continuing her slippery footholds on world trade through a series of bilateral trade agreements, the obvious alternative to a general reduction of tariffs all over the world. How far these trade pacts have helped the improvement of British trade during the last few months I cannot say at present. But what is important to my present purpose is that Great Britain has abandoned her traditional free trade, and while trying to keep her hold on foreign markets, she is at the same time exploring the chances of reducing her dependence on foreign trade. But there is as yet little sign of that leaning to socialist ideology which, to my mind, is more characteristic of the present era of economic experimentation than the abandonment under pressure of the prejudices of bygone days.

Abandonment of Individualism

The chief cause of the gravitation towards socialism and planned economy is the shock which the depression has given to the faith of the ordinary man in the feasibility of preserving stability in an economic regime of unregulated individualism. *Laissez faire* as you know, has applied as much to internal economy as to international relations. When international trade relations have got into a mess in which it is apparently hopeless to try to restore *laissez faire*, economic nationalism becomes necessary. Once state regulation is on the move, it is difficult to draw the line at which it should stop. If the support of the nation is required for a protected industry, the voter demands the right to regulate its internal management. The State cannot maintain even a semblance of impartiality, if it tries to secure the benefits of protection for a class. The breakdown of the international order in trade, the necessity for re-ordering of economy on national lines, the inevitability of protection and other state regulation in internal industry, the interference of the State, the payment by the consumer for the maintenance of industry, these form an inevitable gradation towards economic equality and the weakening of individualism in economics.

The Jungle Ahead

It would have been well if it could be said that the alternative to the old regime were clear. It is unfortunately true that such experience as we have of economic equality is not conclusively in favour of its immediate adoption. While it is futile to cast longing lingering looks behind at individualism, it is not as if the haven of communism is near and clear before us. Soviet Russia took the plunge into Communism with the same unquestioning faith in it as Britain and France had in capitalistic individualism. During the last few years Soviet Russia has, indeed, adjusted her aims and methods to means and conditions. But they are done under stress of necessity, not because her rulers have regarded communism in the spirit of an experiment and have kept an open mind in the issues involved. But others might well regard it as an experiment and shape their policies in the light of the conclusions which the experiences of Soviet Russia suggest.

One result of the Soviet experiment may be set down. We may dismiss all the hollow pleas of the apologists of capitalism, that economic equality must militate against the accumulation of capital, must starve the community of its capital requirements, that men assured of an income are apt to forget the morrow and live a butterfly life. Contrary to all this, the charge against Russia is that she has enlarged the capital equipment to the detriment of current consumables. I have said already that no economist can oppose communism on grounds which he, as an economist, is competent to appraise. The one result I referred to, and which is not in favour of communism, is that the workers, the men who form the masses, are disposed to offer resistance to a communist regime just as much, as or even more than, the capitalists who have immeasurably larger stakes in the present regime.

Need for Caution

The standpoint of a practical and impartial administrator would be: Granted economic equality offers peace from our present turmoil, that there is no theoretical objection, that, once established there is no reason why it should not function, where is the path leading to it? Is it not a fact that, if I endeavour to establish it, either I am thrown out of my seat of power or I am only temporarily successful and eventually my actions throw open the floodgates of communal illwill and chaos? No one, who is not rabidly communist, will deny the validity and force of these questions. In politics, we glibly talk of nation's life time and taking the long view, and all that cant, secure in our faith that this talk is not going to alter seriously the conditions of life in any one generation. But in economics the dislocation caused by a rash step means factories closed, lands fallow, ruined homes and starving millions, and these in turn set another chain of misfortunes in motion.

Value of the Scientific Spirit

Hence, I say, the present is a period in which we have to preserve the utmost scientific spirit in matters affecting economic policy. If I may sum up the remarks I have so far made, the breakdown of international trade and the virtual impossibility of reviving it in its old form, together with the fact that no nation can rely either on absolute self-sufficiency or free international trade relations, makes it necessary for governments to move cautiously in the sphere of economic policy, neither favouring self-sufficiency nor the unfettered international trade of earlier days standing neither for individualism nor for full fledged socialism or communism. Amongst academicians and the large mass of intelligensia in all countries, the bias in favour of individualism and the prejudice against economic regulation and economic equality are weakening. There is at the same time the recognition that there can be no leap over to economic equality without preparing the people through proper education and changes in ideology; and that if there is to be no going back to the palmy days of individualism, we have still to labour hard to clear the thick jungle that lies between us and the enchanting city of the communists. This experimental attitude is also shared by the average industrialist and businessman. He knows better than any socialist—for the knowledge has been at his cost—the futility of unrestricted competition as an agent working for restoration of order. He is for order today; and as his preferences are still for the past, he is prepared to co-operate to a degree in an attempt at regulation.

The conditions are thus helpful to economic experimentation; for the experimental attitude has been, so to say, forced on men. We may now make a rapid survey of the various national economic policies, though necessarily in a cursory manner, and determine the broad trend of economic policy in the world as a whole. Here it is necessary to utter a word of caution. Most governments are conducting their present programmes without the strictly scientific attitude on which I laid emphasis at the start. Nor can it even be said that these policies reflect either the wishes of the majority of electors or the considered recommendations of experts, competent to pronounce on these questions. But it must be remembered that the next government will necessarily have to view the results of present policies in a more dispassionate way and try to profit by them.

Soviet Russia

With this in mind, we shall see what the governments are doing. The first in the list of experimenters comes Soviet Russia. A discussion of its doings is generally a discussion of the *pros and cons* of communism *versus* individualism. But here we are concerned with the question from the more practical standpoint of whether the Soviet Government have been able to achieve a measure of economic prosperity for its people and, what is even more important, a measure of freedom from the troubles and turmoils in which the individualistic world has been pactically immersed during the last four years, and from which there is little hope of extricating itself before long. One might say straightaway that the tremendous instability of economic sustenance which is the lot of millions in capitalist countries is not suffered by the average man in Soviet Russia. But it has been asserted repeatedly by visitors of various persuasions to Russia that there is still an insufficiency of the primary necessaries of life which in the economic organisation that obtains in the country exhibits itself in the tell-tale phenomenon of bread queques in towns and cities. The bread queques have, doubtless, been made much of by those who are not noted for their sympathies with experiments in communism; but it is certain that at the end of the Five Year Plan, the Soviet has more of capital accumulation to its credit than production in abundance of current necessaries. It may be supposed that the persistent efforts of the authorities, which have achieved so much in the sphere of capital equipment, will not be unequal to the task of multiplying the production of current consumables. In fact, the Second Five Year Plan has been formulated mainly with a view to correct this deficiency in the old; and if the second Plan is at least as much of a success as the first, Soviet Russia will have deprived its present detractors of a handle which they have so far effectively turned against her.

Not a Failure—no more

But the real test, to my mind, of the success of communism would lie not in the statistics of production but in its ability to effect that change in the outlook and character of the masses of the population, which will induce them to regard communism, rather as the only acceptable form of social organisation, than as an unwelcome imposition from an autocratic authority above. In this regard, the progress that has been made since the institution of the Soviet Government has been lamentably slow and unsatisfactory. Much of this slackness may be attributed primarily to the persistence of old traditions and mental habits and partly to the propaganda of the supporters of the old order and partly to the fear that the communist regime might in the long run, have to give way under the combined pressure of an individualistic outer world. In judging the Soviet experiment, let us not forget that it is more difficult for one nation to preserve a socialistic regime in a predominantly capitalist world than for one democracy to thrive amidst a ring of autocratic Empires. The future of communist Russia would, to a large extent, depend upon the progressive conversion of the rest of the world to the ideals for which Russia stands in the sphere of economy, the same as that conversion depends on the ability of the Government to convince its people that communism is the best form of economic

government. It is sufficient for our purpose to note that there is nothing in the results of the Soviet experiment to indicate that its failure is inevitable or is, for any other reason, a foregone conclusion.

While there has been everything to sustain the faith of the Government of Soviet Russia in the correctness of the path it has been pursuing, the world outside Russia would still be justified in believing that to imitate Russia were to carry out a leap in the dark and that, if the older order has proved untenable, the change to the new must be attempted by slow and extremely cautious steps.

Fascism in Economics

It was left to Fascist Italy to realise that economic planning need not necessarily be of the "red" brand. The State might avoid the deep sea of unregulated individualism without going over to the devil of Marxian Communism. The economic theory of Fascism is a compromise between classical *laissez faire* and Bolshevik "regimentation". Add to this the political theory of the "Corporate State" and its willingness and ability to clip the wings of individual freedom where it threatens to go against the common interest, we have the theory of Fascist economics.

As for its practice, it is certain that it has abandoned the half truths of *laissez faire* economics and carried out vast schemes of internal economic development in defiance of the principles of "sound finance", so called. But I have seen more than one economist of repute suggesting that Fascism is but the last bulwark of dying capitalism and that, though under the iron heel of Signor Mussolini, capitalist interests have been prevented from interfering too seriously with the even tenor of Italian economic life, the succession of a less masterful personality would see the revival of all the embarrassing problems of capitalist economy in very nearly their old form again.

What is yet an allegation against Fascist Italy is a considered verdict in the case of Fascist Germany.

Arguing *a priori* there can be only one *raison d'etre* for Fascism, namely, that it marks the transition from capitalist to socialist economy, from a precarious instability to an assured stability, from conditions that are scarcely distinguishable from chaos to an order which provides for progress without pain or, shall I say, motion without jolt.

In so far as Fascism in Italy and Fascism in Germany are suspect of insidious attempts to perpetuate a social scheme in which human suffering does not enter into social cost accounts, they can hardly be regarded as a landmark in the road that lies before human economy.

New Deal in America

We may now pass on to the experiments of Mr. Roosevelt in America. This is more strictly an experiment than communism or Fascism. For both communism and Fascism are based on hide-bound doctrines, economic and political. Both are animated by a fanatic faith which has little tolerance for rival creeds. On the other hand, Mr. Roosevelt has a pleasant freedom from doctrinaire ideas. He sees the logical implications of the present depression, recognises that a broad basis of consumptive demand is necessary, if industry and trade are to revive and dismisses the crude argument that to revive industry through increased wages is to attempt to raise one's self by pulling the boot jack. He sees the small place which foreign trade occupies in American economy and argues that the main lines of his economic policy ought not to be governed by considerations of foreign trade. He is overwhelmed by the evidence of the huge weight of indebtedness and decides to devalue the dollar. When he sees the mischief done by speculators he comes out with his measures for the control of the stock markets. If reduction of acreage is necessary, he goes about it in a businesslike fashion. And all his schemes are related to the central idea of expanding consumption by increasing employment and wages. The Roosevelt policy cannot be discussed at length here; but all I wish to urge now is that it is truly an experiment carried out in a proper scientific spirit, and it is up to every one, who cherishes some concern for the common welfare, to watch the efforts of Mr. Roosevelt, if not with enthusiasm, at least with dispassionate interest. It may well be that, whether Mr. Roosevelt succeeds or fails in his present programme, he ultimately points out, by example or by warning, the safest path which leads from the individualism, which we have forsaken under pressure of logic and events, to that far off City of Equality and Peace which is beckoning to us from the other side of a sea of obstacles.

The Social Problem in India

For us, in India, economic experimentation has now but an academic interest, for the simple reason that we have not the freedom either to will or plan. We are content now to use what power we have to expand domestic production under the stimulus of protection without the fear that our exports may thereby suffer. For we believe that the maxim that you cannot sell unless you buy has not the same terrors for us as, for instance, for Great Britain. But let us not delude ourselves that the instability of an unplanned economy will not dog our footsteps or that the rising tide of economic egalitarianism will flow past our keel and leave us undisturbed. Too many of our business men believe that the problem before them is how best to organise propaganda against Pandit Jawaharlal. But to the dispassionate observer there can be no mistaking the fact that the problem is not how to foil the socialists but how best to reconcile the claims of economic equality without occasioning too grave a disturbance of social order or economic security and progress. And hence I say, let us watch the experiments in the spirit of an experiment.

"JNAN"

DESHERGER SEAM COAL

(SUDI COLLIERY)

Certified by the Indian Selected Coal Grading Board and by the Government of India Test House, Calcutta.

FORMULÆ:

Moisture	2·07%
Volatiles	33·40%
Fixed Carbon	57·55%
Ash	9·05%
Nature of Coke	Coking
Colour of Ash	Buff

SILVER REDEMPTION RESERVE

FULL TEXT OF GOVERNMENT'S MEMORANDUM

Our Special Representative at Delhi sends us the following memorandum prepared by the Finance Department for the Joint Select Committee. He writes: "The proposal contained herein was not considered in the committee. This question will, therefore, arise in the debate on the Reserve Bank Bill. The Finance Member made some such announcement in the course of his speech on the Silver Agreement. This document is not, therefore, confidential in the sense that is meant in conventional reference to the Select Committee."

In paragraph 21 of the report of the London Committee on Indian Reserve Bank legislation they made certain recommendations regarding the transfer of rupee coin between Government and the Bank which have been embodied in clause 36 of the Reserve Bank of India Bill, 1933, and as regards certain matters arising out of these recommendations the Committee proposed that they should be further examined in India.

(*a*) Heading (2) of the arrangement recommended was as follows:

> "Any surplus of rupees which this arrangement would enable Government to remove from the reserve should be held by Government in a separate account, the silver being held as bullion not as coin. **Subject to further consideration by the Government** of India any proceeds from the realisation of such rupees should not be used, except for the purpose specified in (3) below."

The purpose thus specified was the "payment of full value" (40 per cent. in external assets) for any further surplus rupees transferred by the Bank to the Government.

(*b*) The concluding recommendation of paragraph 21 was as follows:—

> "We do not propose any alteration in the figure (of external reserves) in the new Bill, but we think that this proportion may not necessarily be adequate and we recommend that the question whether a higher proportion is required at the outset should, before the Bank is set up, **be carefully considered by Government** in the light of all the prevailing circumstances."

2. In paragraph 25 of their Report they also remarked:

> "The possibility would obviously be present that the Bank might gain a large premium on the gold handed over to it by Government. The question as to how such premium should be dealt with, specially in the event of sales being made in the intermediate period pending revaluation of the gold, raises complex practical issues which we have not fully discussed. In principle such profits should belong rather to the Government than to the Bank, but our view is that this unrealised margin should in some way or other be kept available for strengthening the position of the currency reserves. We **recommend that detailed proposals should be worked out by the Government of India for consideration during the passage of legislation on this subject.**"

3. The points thus referred for further examination raise two problems which are closely connected and which, in the opinion of the Government of India, should be treated together. The following appear to be the main considerations which should be taken into account:

(*a*) The proceeds of any sales of the surplus silver (to be retained by the Government under the arrangement proposed) and of any surplus realised on the sale or revaluation of the gold (to be transferred to the Bank) would represent assets originally accumulated against the issue of currency and as part of the ordinary currency business of Government. Such assets should therefore be regarded as primarily earmarked for currency purposes.

(*b*) It does not however necessarily follow that such assets should be directly or immediately absorbed in the currency reserves of the Bank, because

(*i*) The Government must retain a separate reserve against the liability imposed upon it to pay full value for further surplus rupees which it may be required to take over from the Bank under the proviso to sub-clause (1) of clause 36 (cf. also the recommendation of the London Committee referred to above in paragraph 1 (*a*)).

(*ii*) Reasonable account must be taken of the general financial position of the Government which may react on the currency position. Looking at the matter from a practical point of view, it may not be good policy to accumulate excessive funds in specially earmarked reserves, because in the first place this may involve a substantial loss of interest seeing that in normal circumstances it will only be possible to earn a much lower rate of interest on such funds than the Government has to pay on its own public debt, and, in the second place, the general effect on India's credit of repaying outstanding loans may be of greater value than adding to accumulated reserves (cf. as an actual example in the past the repayment by the Government of India from its own resources of the £15,000,000 sterling loan in January, 1932).

(*iii*) If the Bank is started off initially with reserves in gold and sterling assets which afford amply adequate cover against its issue liabilities, the addition from outside of still further external assets would serve no useful purpose and might even put the Bank into a position of being able with undue ease to expand the currency against rupee assets when that was not justified.

4. The Government of India have carefully weighed the above considerations and I am directed to place the following scheme before the Committee for its consideration:—

(*a*) The silver which will be retained by Government, whether in rupee coin or bullion, should be regarded as stock purchased by Government from its Currency department. On the basis of the accounts of the Currency Department on the 31st August, 1933 (at which date the silver stocks attained the maximum point reached during the current year) Government after handing over 50 crores of rupees to the Bank would retain rupees and silver of a nominal value of 55,41 lakhs. Against this 55,41 lakhs would be set off the value of the assets of the Gold Standard Reserve, 53,33 lakhs, so that the net debt against the silver thus retained by the Government would be the difference between these two figures namely 2,08 lakhs.

(*b*) The proceeds of any sales of silver after the transfer would be credited to a separate fund more or less on the lines of the present Gold Standard Reserve which it is suggested might be called the "Silver Redemption Reserve". This reserve would be invested by Government in its entirety in gold or sterling securities.

(*c*) The book loss on sales of silver since the commencement of selling operations is approximately 31,63 lakhs, and this figure must also together with the 2,08 lakhs mentioned under (*a*) be regarded as a debt incurred against silver. To this debt will also have to be added the full nominal value of any silver

rupees returned by the Bank under clause 36 (1) of the Bill, while the full nominal value of any rupees sold to the Bank under clause 36 (2) will be deducted from it. The loss of 31,63 lakhs already incurred is at present held in a suspense account and it will continue to be so treated. Interest and amortisation provisions against the debt represented by this loss and the 2,08 lakhs balance of silver to be taken over together with any further silver which may be taken over will be made in the manner described in the following paragraphs.

(*d*) Interest on the outstanding loss which is in fact represented by a corresponding portion of the public debt (namely Treasury Bills in the Paper Currency Reserve) is at present met out of the revenues of the Government of India. This should continue both for the outstanding loss and any other additions to the silver debt referred to above, but the Government of India should be allowed to set off the interest which it receives from the investments in the Silver Redemption Reserve. In other words, the interest on this Reserve will not be added to the Reserve but will, as at present, accrue as a receipt to Government revenues.

(*a*) This is not really in the true sense a loss. It is the figure which represents the difference between the price and the silver sold as bullion and the face value of the rupees from which the silver was produced. In order to get a true picture of the position there must be balanced against this nominal loss the profits which the Government originally made when the rupees were put into circulation, from which profits inter alia, the £40 millions Gold Standard Reserve was built up.

(*e*) Provision will also have to be made for the amortisation of the outstanding "silver debt". At present no provision is made for the amortisation of Treasury Bills held in the Paper Currency Reserve so that in practice there is no amortisation provision for the debt representing losses on account of silver. The Government of India consider that some provision should be made but any plan for this must be dealt with as part of the Government's general plan for Sinking Fund provisions on the public debt —a question which must be dealt with separately.

5. It remains to consider how the funds which would accumulate in the Silver Redemption Reserve should be utilised. The considerations affecting this question have been set out in paragraph 3 above. Weighing up the various considerations, the Government of India consider that it would be a reasonable arrangement to allow the Silver Redemption Reserve to accumulate until it reached a total of 10 crores. Any further receipts should not be separately invested but should be taken direct into Treasury balances to reduce the outstanding "silver debt" described in paragraph 4 (*c*) *i.e.*, to be utilised for the reduction of debt either by the redemption of existing debt or the avoidance of new borrowing. A Reserve of 10 crores in external assets would allow for a return of 25 crores of rupees by the Bank to Government, that is to say the maximum amount which could be returned in five years. This should be adequate for all practical purposes and against locking up funds beyond this reasonable margin must be weighed the consideration mentioned in paragraph 3 (*b*) (*ii*) above.

6. As regards the second recommendation of the London Committee (paragraph 1 (*b*)) of this Memorandum, the Government of India do not consider that it would be practicable at present to decide whether and, if so, to what extent the Bank should be provided with external cover in addition to the 50 per cent. indicated in clause 35 of the Bill. It is of course understood that the whole of the Government's gold holding will in any case be handed over. Apart from this, if there should be any margin of other external assets which the Government at the time when the Bank is set up did not consider it necessary to hand over to the Bank and which it would consequently retain for its own purposes, the Government of India provisionally consider that the most suitable alternative method for appropriating any such surplus would be to transfer it as opening balance to the Silver Redemption Reserve proposed above.

7. As regards the third point in paragraph 25 of the London Report (*vide* paragraph 2 of this Memorandum), the Government of India do not consider it necessary to make any specific proposals regarding the utilisation of any hypothetical profits on the revaluation of gold. Such profits might arise in two ways :

(*a*) There might be sales, in which case there might be a considerable premium representing the difference between the market price and the statutory price as indicated in clause 33 (4) of the Bill.

(*b*) When the time comes to adopt a permanent currency standard as contemplated in the preamble to the Reserve Bank Bill, the new valuation as compared with the valuation at the old parity as adopted in clause 33 (4) might be such as to show either a paper gain or loss.

8. As regards alternative (*a*), sales are very unlikely and unless they were for a very large amount, the profit on them would not be sufficient to alter the dividend payable to the shareholders, in which case the whole of the profit on such sales would accrue to Government under clause 44. The Government of India do not consider it necessary to legislate for this highly hypothetical contingency.

9. As regards alternative (*b*), if there was a revaluation, clause 33 (4) of the Bill would require amendment, in which case it would be open to the legislature to make a further amendment of the Bill so as to ensure that the whole of the profits or losses on such revaluation would accrue to or be borne by Government. If there were profits, actual manner in which any such hypothetical profits would be utilised is a still more hypothetical question on which it appears to the Government of India to be even less necessary to formulate any specific scheme. It is obvious that any such paper gain should not be swallowed up in ordinary revenues but should be devoted to some currency purpose and this most probably would take the form of an additional fortification of the Silver Redemption Reserve. That, however, is a matter which could be left to be decided at the time.

10. The Government of India therefore do not consider that any provision need be made in the present Bill with respect to these recommendations, of the London Committee, but they would suggest that a note might be made in the report, possibly on clause 33 (4), on the lines indicated in the preceding paragraph, regarding the utilisation of any book gain or loss on gold, while they would also be glad to have the views of the Committee on the scheme for a Silver Redemption Fund set out in paragraphs 4 and 5 of this Memorandum.

An **Engineering Plant** fully equipped to undertake all classes of Railway works, General Engineering works and Machinery Manufactures, is for sale as a going concern. Full particulars on application to Box No. 10, C/o. "Indian Finance".

GREAT BRITAIN

ELECTION BUGBEAR

The reopening, on November 7, of the Parliament for a short-term Autumn resumption of its adjourned session, was the occasion for a series of quasi-social functions, in the City, which gave His Majesty's Ministers an opportunity to disburden themselves of the heavy thoughts, induced by East Fulham and Municipal elections.

London season, in political parlance, commenced on November 6, with the luncheon given at the Trocadero Restaurant by the National Labour Committee. The chief guests were the Prime Minister, Mr. Baldwin and Sir John Simon. The dominant thoughts of the guests centred round political omens in the country, and they were at pains to deceive themselves into the belief that their services, founded on their achievement, would be in demand for ever so long.

Mr. Ramsay MacDonald was pleased to observe that "the condition of the world now means that any attempt to return to Party Government—which is bound very soon to become partisan government—is not only a mistake, it is a crime". Referring to dictators in general, he asked them to remember that, in form, their will was imposed on the people; they had wakened something in the hearts of the people which had given a new vision and a new energy to pursue national affairs.

Mr. Stanley Baldwin was more explicit. He believed that it would be a long time before there was an election, and there was a great deal to be done, but the country was in an incomparably better position than it had been two years ago. He said: "At this moment we are the the sole guardians of that form of constitutional democracy which took its rise in this country, and towards which we have been working with tremendous accelaration, since the war, not for a generation but for centuries".

Sir John Simon contented himself, through sheer inanition, with salvaging an old saying of Sir William Harcourt's, "we are all socialists now", and callously believing that they were.

On November 9, the Prime Minister had another opportunity, at the Guildhall Banquet, to dilate upon achieving trade improvement. The imports of raw materials for the first quarter of this year were up by one-third,—"the key fact in national prosperity". Six hundred and sixty thousand insured people more, than twelve months ago, were earning their bread by the sweat of their brows. Regarding the onerous task of the National Government to provide for the nations of Europe security and peace, he claimed that the Government was spending, on fighting services, public money, just necessary for defence under present conditions.

Mr. Walter Runciman, President of the Board of Trade, speaking at the annual luncheon, on November 10, of the British Steelwork Association, observed: "Nobody knows what will be the result of the next general election,—though some people seem to have made a pretty shrewd guess."

After all, the National Government has only had the small sample of by-elections in eight constituencies, with but one thumping labour victory in East Fulham. The results of Municipal elections have but an indirect bearing on the Parliamentary electoral mind. But, there stares the broad fact, in the face of the National Government, of the increased labour percentage of votes. From 47.8 in 1929 and 43.7 in 1931 to 52.0 in 1933, in spite of the fact that it is harder to get the vote out at by-elections than at the General election, should rather disturb the otherwise complacent minds of the Cabinet of the National Government. No wonder, therefore, that Mr. Runciman should reluctantly admit that "some people seem to have made a pretty shrewd guess," regarding the result of the next General Election.

Bungling of Disarmament

Disarmament will, in all probability, prove the utter worthlessness of the National Government. Public opinion is keenly alive to this question. The short-term Autumn session of the Parliament, which was specially provided for, to enlighten the House of Commons on world affairs in these uncertain days, brought the sorry conduct of foreign affairs in lurid light.

Sir Stafford Cripps, describing, to his Bristol Constituents, Sir John Simon as the worst British Foreign Secretary for two centuries, remarked that "the British Draft Convention might well make the gods laugh if they desired the destruction of the human race." Sir John Simon smarted under the sting of the criticism and, during the Disarmament debate, described, without effect, Sir Stafford's remarks, as "a classic example of the morbid delight which some Englishmen take in fouling their own nest." His contribution to the debate, beyond this, was nil.

Mr. Lansbury was keen on securing a vote of the House on a motion, calling for the total disarmament of all nations, with the formation of an international police force and the control of civil aviation.

Sir Austen Chamberlain reminded the House that it was not the first time that Germany had prevented conferences for the promotion of peace and disarmament, but recognised the fact that it might be less favourable both to Germany and the other countries, if a Disarmament convention was signed, without Germany's signature.

It will not be out of place here to mention that the Archbishop of Canterbury led a deputation, including representatives of science and industry. The Prime Minister and the Foreign Secretary received it on November 10, at the House of Commons.

One of the principal speakers was Sir Josiah Stamp. He said:

> "Any general description of weapons may in course of time become more and more difficult of interpretation as, in course of time, new features are invented. We feel that it is worth while to explore a further limitation, which though inadequate in itself, may succeed where the others fail. I mean a monetary or financial limitation of armaments.
>
> "In any case, rather than forego the principle, I personally would suggest that it is perfectly feasible to introduce a sliding scale, as has already been recognised internationally nearly ten years ago in the Dawes Plan, which would overcome any general shifting in the value of money.
>
> "We feel that the principle could also be applied to particular categories of armaments and not merely to the armaments Budget as a whole without power of substitution. The economic effect of such arrangements upon all concerned could not be otherwise than good. They make certain where there is at present complete industrial uncertainty."

The Foreign Secretary's resourcefulness could only find an answer, in that there were tremendous difficulties, as the experts knew. It is clear he is but a mouth-piece.

The Prime Minister, after beating about the bush, without meeting Sir Josiah Stamp's argument, confessed that, as far as Disarmament was concerned, he thought a little friction had developed on the matter of method.

The problem of Disarmament, and the concommittant promotion of peace, has, in the hands of the Government, degenerated into the *traditional* tangle of diplomacy. The conduct of the Government on this matter justifies, to some extent, at least, Sir Stafford Cripps' caustic criticism.

Air Mail Week

The National Government is firmly convinced of enforcing peace by supporting France without equivocation. The talk of reconciling Germany's demand for equality with France's demand for security is meaningless jargon.

But, the public knew, to its cost in 1914, what an armed-camp peace meant. Evidently, the Government is on the horns of a dilemma. To support France is to pursue the policy of an armed-camp peace, and it carries with it the risk of an electoral defeat.

To back Germany is out of the question. The British Cabinet is convinced that Germany has already substantially rearmed, that she will rearm a great deal more, and that her intentions are warlike. Sheer diplomacy has put a curb on the tongues of the members of the Government, openly to say so.

By all tokens, Disarmament is dead. And yet, the Government is not free to choose to alarm France, or to antagonise the electorate.

A device to wriggle out of the dilemma is under way. Documents, indicating the extent of Germany's rearmament, are expected to be published in Belgium forthwith. The National Government will clutch at the "God-sent" opportunity to give them the fullest publicity, in order to appease an irate electorate.

But then, Mr. Lloyd George's criticism of the failure to implement the promises, given to Germany in 1918, remains unanswered. Can the publication of the German rearmament documents do it? Opinion is, however, gathering force that "the mere shifting of the basis of discussion from that suggested in the MacDonald plan played a great part in exasperating German opinion." Sir John Simon's bungling, without so much as actually stiffening the terms against Germany, has caused this mischief, by the mere fact of the British contemplation of a change.

The British draft convention fails to provide for a budgetary limitation on armaments, and preserves a powerful vested interest in competitive armaments, by leaving the manufacture of arms in private hands.

Baron Von Neurath has, in addition, introduced an uncertain factor, by declaring his willingness to co-operate with "a better League of Nations." There is no knowledge as to what changes he desires to be made, for the League to suit his liking.

On the other hand, some publicists in France are nursing the opinion that only an understanding with Hitler, if ever possible, will be of real value, as it offers a greater guarantee than others.

If Disarmament succeeds, its best chance lies in a direct understanding between France and Germany. Any such success will cost a lot to British prestige.

War Debts Negotiations

On the day of the reopening of the Parliament on November 7, the papers, relating to the British war debt to America, were published as a White Paper. Sir Ronald Lindsay, the British Ambassador at Washington, in his statement, said that, in view of the President's inability to accept payment in silver at a price of 50 cents an ounce, His Majesty's Government proposed to make a payment of $7½ millions in United States currency on December 15 next.

Mr. Cordell Hull, the United States Secretary of State, in his reply, among other things, stated that he ventured to recall the comments, contained in Mr. Phillip's note of June 15, 1933, to the British Ambassador, respecting the limitations on the President's power in the matter of debts owed to the United States.

President Roosevelt also issued a statement, from which the following passage is taken: "In view of these representations, of the payment, and of the impossibility at this time of passing finally and justly upon the request for a readjustment of the debt, I have no personal hesitation in saying that I shall not regard the British Government as in default."

In June last a token payment of 10 million dollars was made. But, the silver concession caused its reduction to about £1.6 million sterling. The present token will amount to about £1½ millions sterling. The aggregate of the two payments represents about a tenth of the amount of the interest, due under the settlement of 1923.

Not to describe these token payments as in default is an abuse of language. Public opinion has condemned the war debt negotiations as a failure, however much the respective parties may be accommodating to each other. How this delay in facing realities will help either party is incomprehensible. The excuse of abnormal financial conditions is simple camouflage. The negotiations are strongly believed to have broken down on the wide disparity between the British offer of 25 per cent. of all debts and the United States' claim of 75 per cent. The Congress is expected to be uncompromising. But, it is to be expected that, after the meeting of the Congress, President Roosevelt will be in a position to offer definite concessions, provide Congress relents.

The Unemployment Bill

The short-term Autumn session of the Parliament was reopened, not only to apprise the House with momentous world affairs such as disarmament and war debts, but also for implementing the recommendations of the Royal Commission on Unemployment Insurance, whose report was published almost a year ago. The Unemployment Bill is the only achievement of the Government, about which they can, in some measure, feel proud. The Bill is in two parts. The first part deals with Insurance benefit, by providing for a self-supporting Actuarially solvent Insurance Fund. The second part of the Bill lays down provisions for unemployment assistance.

The self—supporting Insurance Fund is to be placed under the supervision of a Staturory Committee, which will report to the Minister of Labour, when a deficit has to be met, or a surplus has to be disposed of. Those, who have made thirty contributions in two years will be entitled to twenty-six weeks' benefit. But those, who have contributed for five years, are to get benefit for fifty-two weeks. Agricultural workers, domestic servants and such others as have not been eligible for benefit before, are to be permitted to come under the Insurance scheme, which the Statutory Committee is to consider. Juveniles above fourteen years are made eligible. In their case, the State contributes 2d.; employers 2d.; and the juveniles 2d. But, juveniles under full-time instruction, between the years fourteen to sixteen, are allowed two shillings a week through their parents. Educational authorities in districts have to open instruction centres for juveniles below eighteen years, and attendence is compulsory. To meet the expenditure on this account, the local authorities should contribute 25 per cent., and the Exchequer and the Insurance Fund, the balance in equal shares. If the number of juveniles is small, instructional courses should be arranged for them. The debt of the Insurance Fund, amounting to £115 millions, is to be amortised at 3½ per cent. over a period of forty years.

The only important deviation from the recommendations of the majority report of the Royal Commission is in respect of the elimination of the local authorities from all part in the administration of unemployment assistance. The local authorities will only have, on their hands, the sick, the old, and the infirm. In some quarters, this elimination of the local authorities from administering unemployment assistance is criticised on the ground that their intimate knowledge with local condition is being lost. But, it is commonplace knowledge that, during the prolonged industrial depression, the local authorities found themselves unequal to the task of coping with

The Congress is expected to be uncompromising. But, it is to be expected that, after the meeting of the Congress, President Roosevelt will be in a position to offer definite concessions, provide Congress relents.

The Unemployment Bill

The short-term Autumn session of the Parliament was reopened, not only to apprise the House with momentous world affairs such as disarmament and war debts, but also for implementing the recommendations of the Royal Commission on Unemployment Insurance, whose report was published almost a year ago. The Unemployment Bill is the only achievement of the Government, about which they can, in some measure, feel proud. The Bill is in two parts. The first part deals with Insurance benefit, by providing for a self-supporting Actuarially solvent Insurance Fund. The second part of the Bill lays down provisions for unemployment assistance.

The self—supporting Insurance Fund is to be placed under the supervision of a Statutory Committee, which will report to the Minister of Labour, when a deficit has to be met, or a surplus has to be disposed of. Those, who have made thirty contributions in two years will be entitled to twenty-six weeks' benefit. But those, who have contributed for five years, are to get benefit for fifty-two weeks. Agricultural workers, domestic servants and such others as have not been eligible for benefit before, are to be permitted to come under the Insurance scheme, which the Statutory Committee is to consider. Juveniles above fourteen years are made eligible. In their case, the State contributes 2d.; employers 2d.; and the juveniles 2d. But, juveniles under full-time instruction, between the years fourteen to sixteen, are allowed two shillings a week through their parents. Educational authorities in districts have to open instruction centres for juveniles below eighteen years, and attendence is compulsory. To meet the expenditure on this account, the local authorities should contribute 25 per cent., and the Exchequer and the Insurance Fund, the balance in equal shares. If the number of juveniles is small, instructional courses should be arranged for them. The debt of the Insurance Fund, amounting to £115 millions, is to be amortised at 3½ per cent. over a period of forty years.

The only important deviation from the recommendations of the majority report of the Royal Commission is in respect of the elimination of the local authorities from all part in the administration of unemployment assistance. The local authorities will only have, on their hands, the sick, the old, and the infirm. In some quarters, this elimination of the local authorities from administering unemployment assistance is criticised on the ground that their intimate knowledge with local condition is being lost. But, it is commonplace knowledge that, during the prolonged industrial depression, the local authorities found themselves unequal to the task of coping with

Air Mail Week

very large numbers. Besides, some of them used the rates of transitional benefit as an instrument of bribing a section of the populace.

The second part of the Bill, which deals with unemployment assistance is to be administered by an Unemployment Assistance Board, consisting of not more than five members. The Board has to provide a course of physical training. All employed or employable persons, between the ages sixteen and sixty-five, who have fallen out of insurance, will be eligible for receiving assistance. But, the applicant has to attend a work centre, or to enter a workhouse. In dolling out assistance, the household is made the unit, and need will be relieved. Disability pensions are, however, protected. The present local authorities' relief is to be taken over by the Board. This scheme is estimated annually to cost £5 millions. The financing of it is apportioned between the local authorities and the Exchequer for the next five years, in the proportion of 60 per cent. and 40 per cent. respectively.

For the first time unemployment relief is recognised as a national institution. The dole, which, relegated the relieved to a life of idleness, was a great demoralising force to the physique, and to the mind, of the unemployed. Under the present scheme, care has been taken to compel the unemployed to a course of instruction, and devotion to physical improvement. The innovation is eminently good; but, the applicant to assistance is compelled to accept work when it becomes available, under penalty of being driven into the poor-house for non-acceptance. The *News Chronicle*, therefore, stigmatises the Bill as a thoroughly Tory measure, capable of being used with the greatest harshness and injustice by a Tory Minister. The *Daily Herald*, however, condemns, it as a measure to pauperise the unemployed. The bureaucratic rigidity, which should apparently grow out of the new system, should, anyhow, be safeguarded against.

The other serious objection is the saddling of the Insurance Fund, with the debt of £115 millions. In this respect, the *Financial News* has the following remarks to make:

The total cost, at a maximum, is probably about £7,500,000, and, if the 60-40 division is finally agreed to, the net new cost to the Exchequer will be about £3,000,000.

> The total new burden assumed by the Exchequer would thus be about £4,850,000. Against this, the Exchequer will relieve itself, as a result of the extension of the maximum Insurance Benefit period from 26 to 52 weeks, of about £8,350,000, which will be charged to the Fund. The Exchequer is thus a net gainer by about £3,500,000. Meanwhile, there is the question—can the Fund stand this new £8,350,000 per annum charge, in addition to the £5,500,000 per annum it is to pay for interest and redemption of its £115,000,000 debt? The Government Actuary has concluded that it should be able to do so; and that is really sufficient. According to figures given in Parliament, the Fund has accumulated a credit of £5,250,000 in (approximately) the first seven months of this financial year; even allowing for the seasonal unemployment in January and (possibly) part of February, it should, *ceteris paribus*, have a credit of £9,000,000 or so by the end of the financial year. It is clear, therefore, that the Fund is, in the absence of an industrial setback, well capable of looking after its new responsibilities.

It is estimated that 16 million persons will come within the scope of the new Bill, as against the 12 million persons, now covered by unemployment insurance. The additional cost of the new proposals to the Exchequer will be on the score of juvenile instruction courses, and administration and salaries, relief and new reconditioning centres as, and when, required, under the Unemployment Assistance Board.

The Bill was formally presented in the House of Commons on November 8, by Sir Hentry Better-

son, the Minister of Labour. Mr. Hudson, Parliamentary Secretary to the Ministry, announced that the unemployment fund, owing to the continued improvement in employment, has accumulated a surplus of about £5,250,000.

The Parliamentary Labour Party, at a meeting at the House of Commons the same day, arranged for a debate with respect to the position of unemployed persons under the National Health Insurance and Contributory Pensions Acts. Mr. Lansbury presided. The Labour Party on November 10 moved the following motion:

"That, in the opinion of this House, the hardships arising from long-continued unemployment will be unduly aggravated by denial of the benefits conferred by the National Health Insurance and Contributory Pensions Acts, and therefore provision should be made for a State contribution towards safeguarding the position of those insured persons who are victims of the present industrial depression."

The motion had the effect of a vote of censure against the Government.

Mr. George Hall, who opened the debate, declared that tens of thousands of unemployed persons had been deprived of their rights of sickness, disablement and maternity benefit. They would also lose their medical benefit at the end of this year. He regarded no cost to the State was too much, as unemployment was to be treated as a social disease. He consequently felt that persons, who were incapacitated by it, should not be obliged to bear the burden by the loss of their insurance rights.

The motion had the support of a section of the Liberals.

Mr. Buchanan clinched the question, when he said that many of the men, who were now the victims of unemployment, had helped to win the War, though they escaped being killed. When pensions were being given to the men who won the War, there was no talk of financial stability.

Sir Edward Hilton Young, Minister of Health, conceded that repayment of arrears of contribution could be postponed by four months i.e., until the end of next March. But, he defended that the financial stability of the National Health Insurance scheme was threatened by the long depression and unemployment, with the consequent failure of contributions income. The whole purpose and effect of the Act was to restore solvency to the scheme.

Mr. Arthur Greenwood asserted that benefits had become part of the warp and weft of the people, part of their standard of life, and deprivation of them, because of unemployment, amounted to nothing more than the permanent pauperisation of the people, because of circumstances over which they had no control. He charged the National Government with imposing, by its Act, on the people in 1934, the humiliation and degradation of the poor law system of 1834.

The Labour motion was up against a stone wall, and was defeated by 161 against 48.

Trade Recovery

In reply to a question, Mr. Runciman said that British exports of cotton piecegoods, on account of trade agreements, to Denmark, Iceland, Norway and Sweden were substantially greater in the period July to September, than in the same period last year.

Mr. J. H. Thomas, in reply to a question of Mr. Mitcheson said that, in Australia, the duties on United Kingdom goods had been reduced in 67 items or sub-items of the Tariff, and only increased in five items. In addition, reductions ranging up to 12½ per cent. *ad valorem* were to be made in the protective duties, applicable to British goods, in partial relief of the depreciation of the Australian currency in terms of sterling, in relation to approximately 850 items in the Tariff.

According to the Ministry of the Labour figures, issued on November 6, the number of unemployed persons on October 23, last, on the registers of employment exchanges, was 1,854,290 wholly unemployed, 357,669 temporarily stopped, and 86,794 normally in causal employment, making a total of 2,298,753.

This was 37,974 less than the number on the registers on September 25, and 448,253 less than a year ago.

The total on October 23, comprised 1,911,529 men, 52,220 boys, 297,686 women and 37,381 girls.

It is estimated that, on October 23, there were approximately 992,500 insured persons, aged 16 to 64 in employment in Great Britain. This was 44,000 more than the revised figure for a month ago, and 537,000 more than a year ago.

Between November 3,1931 and October 24, 1932 (51 weeks) 1,776,291 vacant situations were filled.

In the period October 25, 1932, to October 23, 1933, (52 weeks) the number filled was 2,166, 959.

The only decline was in building, public works contracting, the distributive trade, and hotel and boarding house service, in iron and steel manufacture and in the road transport and shipping services.

Electricity supply recorded continous expansion through the past three years to the aggregate extent of as much as 1,979,000,000 units, equivalent to an average annual increase in output of 659,000,000.

Of the industrial equipment installed in 1930, electric motors having a capacity of over 4,100,000 horse-power were then dependent upon factory-produced electricity, while prime movers having a capacity of the order of 6,700,000 horse-power were still installed for direct mechanical drive.

"This equipment thus represents a potential addition of over 10,000,000 horse-power to the existing industrial

load on the public supply systems as and when the factory generating plant and prime movers become obsolete."

The annual production of electricity at the stations, numbering upwards of 500 included within the scope of the returns, increased by 8,488,000,000 units in twelve years notwithstanding the fluctuating conditions of trade and industry during that period, representing an average increase of 707,000,000 units per annum.

Regarding Railway traffic of the year, the aggregate percentage declines for 1933 up to November 9, compared with 1929 for the same period, is 21.61. A week ago, it was 21.69, and a fortnight ago 21.77. The consolation is the decline in the percentage decrease.

The following table gives the percentage weekly declines of the the traffics of the four railways on 1929 and the aggregate decline:—

	Week's percentage decrease on 1929	Aggregate percentage decline on 1929
44th week	... 17.84	... 21.61
43rd week	... 18.44	... 21.69
42nd week	... 19.06	... 21.77

The progressive reduction in the percentage decline will be noted.

The total increase of the four companies was £118,000 as against £77,000 last week, and £112,000 a fortnight ago.

Dumping of Services

Sir Alan Garrett Anderson, President of the Association of the British Chambers of Commerce, at a luncheon of the Southampton Chamber of Commerce on November 8, observed, among other things, that uneconomic subsidies or the use of taxpayers' money to distort the ordinary relation in sea transport was an offence against the principles of world trade, in the view of shipowners. The shipping subsidy was analogous to the dumping of goods, and this dumping of services was particularly vicious and particularly harmful to British interests, at the present time. He instanced the South African subsidy of £150,000, a year to Italian lines, which would receive from the Italian taxpayer £300,000 per year, in order to maintain services in direct and unfair competition with the existing British and foreign lines. Sir Alan expressed his anxiety that they should complete the policy by carrying food and raw materials from overseas in vessels, which should not be withdrawn from their service at the very moment, when they should be of vital need.

Manchester Chamber's Good Sense

Appearing on November 10, before the joint committee on Indian constitutional reform, the Manchester Chamber of Commerce asked, in its memorandum and preface, for safeguards against discrimination under an elected Government in India.

But, the Chamber felt that it would greatly assist in securing a political atmosphere, in which a satisfactory Government of India Act could be passed, if a fresh agreement between the United Kingdom and India, dealing with the cotton trade could be negotiated forthwith.

In the oral examination, Mr. J. Herold Rodder, Chairman of the India Section and Director of the Chamber, in reply to Lord Linlithgow, the Chairman, however said that they had an emphatic preference for solution by co-operation as being superior to some of the arguments, that they had advanced, perhaps, in the joint evidence.

UNITED STATES OF AMERICA

OBSTRUCTION OF CAPITALIST DIE-HARDS

President Roosevelt's indomitable courage has prevailed over the obstruction of Capitalist die-hards. But, the President has only scored a conquest for the time being. The question of consolidating his success is still too premature to hazard an opinion upon. To wrangle about niceties of one monetary policy or the other is beside the point. The *motif* of the President's policy, supported by expert opinion, is what really matters. It is some satisfaction that those, that scoffed at the outset, have been obliged to recognise the success of his policy, if not yet to praise it. But, it is, obviously, no pleasant task for critics, unreservedly to own the triumph, however incomplete or impermanent, of their victim.

The capitalist class may or may not have found any real flaw in the President's policy. But, the human element of it went against the grain of capitalists. While the President started with raising the popular purchasing power, the capitalist die-hards made up their minds to run him down, not on the direct issue of improving the purchasing power of the masses, but on the indirect issue of the method, by which it was sought to be achieved. The growing power of the factory-hand and the farmer was an eyesore to the capitalists. When once the capitalist mind was obsessed with this bogey, raising of prices, first of the commodities and then of the industrials, lost their normal charm. The Wall Street called the tune, and the capitalists across the Atlantic caught it in crescendo. Subjectively viewed, the National Recovery Programme is gall and wormwood to the capitalists.

But, President Roosevelt, as head of the State, stands for the largest good of the largest number. After weeks of persistent barracking, as it were, on both sides of the Atlantic, President Roosevelt's present success has received a measure of recognition. A section of the British Press has conceded that "whatever way we look at it, it seems that the President has, for the time being, applied the screw to the dollar effectively." It is now admitted on all hands, subject to reservations regarding the future, that for the moment, at any rate, Roosevelt has succeeded in imposing his gold price as a measure of the dollar's external value. His success has rightly been attributed to the belief of foreign exchange dealers and owners of capital that Roosevelt means business. But, the detractors of Wall Street are adamant. And yet, since October 21, the day previous to the announcement of Roosevelt's policy, the industrial index has risen by about 17½ per cent. and the rails index by about 17½ per cent; wheat about 10 per cent; and cotton about 8 per cent.

But, leading commodities have not risen, because American money, taking shelter under the so-called element of uncertainty, has taken, and is taking, refuge abroad, instead of in American stocks and commodities, as in last summer.

General Johnson is not to be browbeaten by Wall Street. He has realised that something more drastic is required. At a meeting of Chicago businessmen, he said that, unless businessmen accepted the present plans of the Administration, more extreme measures would be put into operation. That businessmen are increasingly unwilling to accept the Administration's plans can be seen from the paean of praise, which Mr. Henry Ford's recalictrant attitude has evoked from those, who have not the courage to imitate him.

The Ford Co. announced that, in order to comply with the Automobile Code, which the Company already did,—which specified an average 35-hour week, it would have to lay off 45,000 workers and close down the Dearborn plant for seven days. This action is viewed by the N.R.A. officials as a violation of the spirit, if not of the letter, of the Automobile Code. But, President Roosevelt is determined not to relax Federal Control of Industry, until he is convinced that Industry is fit for self-rule in the public interest.

As the businessmen are confronted in this manner, the protagonists of "sound money", under the leadership of Professor Kemmerer, demand that

Air Mail Week

the Government should return to the gold standard by stabilising the dollar at two-thirds of its par-value, and should utilise the resultant savings to pay off government indebtedness to the Reserve Banks. The Guaranty Trust Company of New York gives the following summary of the case for "sound money" :

> It is not only the level of prices but also the level of business activity that determines prosperity, and it is becoming increasingly apparent that the recovery projects cannot lift the country out of the depression unless confidence is restored in the monetary medium in which business transactions are conducted. Lenders and investors are quite naturally unwilling to extend credit when there is any question regarding the value of the money in which they will receive payment, even a few months hence.
>
> At the same time, purchasers become subject to buying inertia. This retarding hesitancy exists both in domestic and foreign trade. At the time when America suspended the gold standard, it was argued that export business would be stimulated. While there has been a moderate upturn in the level of foreign shipments since then, the increase in exports has not only been smaller than the rise in imports, but has lagged far behind the expansion in some branches of domestic business.
>
> It is realised that slipping off the gold standard is much easier than climbing on again, especially since the dollar has been allowed to depreciate heavily. In part, however, the review contends, this difficulty could be overcome. For example, if the Administration should take a definite stand against currency inflation, a partial opportunity would be given for the dollar to show what its "natural level" would be. In the opinion of many observers the dollar, if thus left to itself, would make rapid strides towards its old parity.
>
> There is, of course, a fear that this would result in a sudden throwing on the market of commdities and securities now being held for an inflationary rise, thereby temporarily disorganising price levels. But certainly no such consideration should be placed in the way of a re-establishment of sound money.
>
> Inasmuch as temporary price readjustments are inevitable, it is better that they be precipitated for the express purpose of giving the country the sound currency so essential to lasting business progress.

N.R.A. contemplates to put the Government into the banking business, as the only solution of the opposition, all along, of financial circles to President's plans. It is openly advocated that the Government should purchase the Reserve Banks, on behalf of the public. This verbal advocacy is taken seriously in financial circles, whose fear is increased by the purchase of bank preferred stock, totalling about $232,000,000 up to November 6.

Financial circles are banking their hopes on external action, to defeat the policy of Roosevelt. They inspire Great Britain to put a check on the downfall of the dollar by purchasing dollars, with which to pay her December 15 War Debt instalment. Moreover, they broadcast forecasts of the imminent issue of fiat money, and particularly of silver certificates with legal tender status, in accordance with President's promise to do something for silver.

Experts hold the view that sterling cannot be depreciated on a scale, comparable to the fall of the dollar. The lack of understanding between American and British authorities may lead to a widening disparity between the two currencies, for want of any prospect of their linking together; to competitive depreciation of both currencies; or to keep sterling closer to franc than to dollar. In any case, it is, however, reported that Great Britain will intervene, only if the Administration's domestic price-raising programme fails.

Benefits to Agriculture

Mr. Edward F. McGrady, Assistant Administrator of the N.R.A., enumerated, in an address in Chicago, some of the things which had been done for agriculture. They are : a processing-tax, intended to raise $120,000,000 annually, placed on wheat, in order to give cash bounties to farmers; a similar tax on cotton, designed to raise $111,000,000; and similarly $350,000,000 for the benefit of hog producers. Marketing agreements have been drafted for various producing areas to assure higher prices for milk, and the Administration is preparing to purchase surplus butter and cheese.

The R.F.C. has agreed to advance the Farm Credit Administration $150,000,000 to help finance farm mortgages and another $250,000,000 will be made available for the same purpose, if necessary. New mortgage loans are being made to farmers, at the rate of $1,000,000 per day.

The strike situation among farmers in Iowa area has eased, since the visit of General Johnson. A movement has now begun among the farmers of Iowa to give the Government another chance, and an anti-picket league has been formed.

Processing taxes on the five primary commodities are as follow :—

Wheat	...	30 cents per bushel.
Cotton	...	4.2 cents per lb.
Tobacco	...	1.7 cents to 6.1 cents per lb.
Corn	...	28 cents per bushel.
Hogs	...	From ½ cent per lb. on Nov. 5, rising to 2 cents per lb. in February next.

Civil Works Administration

The delay in reaping the fruits of Roosevelt's mightily effort for National recovery is natural. Retail-buying is postponed on account of repayment of debts by wage-earners. With the opening of closed banks, under the auspices of the Deposit Insurance Scheme of the R.F.C., things will change for the better. The network of organisations to perfect the recovery machine is still being spread.

President Roosevelt just created a Civil Works Administration, authorised to spend $400,000,000 immediately in putting to work 4,000,000 of the men, who are at present receiving unemployment relief. This scheme will be financed out of funds, earmarked for expenditure on public works by the Thomas Amendment to the Farm Act. The 4,000,000 workers will be made self supporting through part-time work, at less than full wages. Mr. H. L. Hopkins, the Federal Relief Administrator, will be in charge of the scheme. Agencies are being set up all over the country.

Provision is also made for the unemployed, numbering at least 6,000,000, who will not come under the scheme. At relief camps, they can find food and shelter in return for work.

The American Federation of Labour estimates that N.R.A. has already given work to 4,000,000 persons. To find work for 8,000,000 persons out of 14 millions is a Herculean task, of which President Roosevelt may well be proud. The workers' total buying power has been increased by 8 per cent. In the next few months, a large volume of construction work will be started with $2,107,000,000, already allotted. Orders for materials will provide further employment by stimulating the heavy industries.

The Cotton Bureau of the United States Department of Agriculture estimated, on November 8, that the current cotton crop was 13,100,000 bales.

> Although some private agencies were forecasting a crop of around only 12,000,000 bales, the present report has caused little surprise generally. The weather has been very favourable to the crop during the past month, and the boll weevil has been conspicuously inactive.
>
> Further, it was known that farmers, while reducing their acreage, had intensified their cultivation of the remainder and had in fact leased to the Government only such land as promised the poorest yields.

September Trade Better

The September foreign trade of the United States brought a "favourable" balance of $13,000,000, which contrasts with an "unfavourable" balance in August of $24,000,000.

Air Mail Week

Exports were valued at $160,000,000 and imports at $147,000,000, the increase of exports over August shipments being about 22 per cent., although an increase of only about 14 per cent. is usual for this season. However, the gains in foreign trade were due not only to an increase in volume, but to higher dollar prices.

The increase of $29,000,000 in exports in September over the August figure is accounted for to the extent of $17,000,000 by increased cotton shipments. Other substantial increases were in manufactured tobacco and fruits.

Exports of raw material during September amounted in value to $68,570,000, compared with $41,970,000 during August. Exports of partly manufactured goods amounted to $21,260,000, against $20,470,000, while exports of finished goods were valued at $58,930,000, compared with $49,970,000.

Imports of raw material during September amounted in value to $48,330,000, against $50,660,000 in August. Partly manufactured goods were valued at $33,510,000, against $35,280,000, and finished goods $33,600,000, compared with $33,680,000 in August.

AUSTRALIA

ECONOMIC RECOVERY

The main interest in the recent devolopments in Australia is its economic policy. Before the rise in export prices, Australia tackled the problem of adjusting the economic life of the Nation to the swift and drastic loss of income, caused by the fall in world prices and the stoppage of external borrowing. The gold prices of Australian exports fell by no less than seventy percent. This fall in Australian currency was met by a moderate and well-controlled depreciation of the currency. Costs have been heavily reduced, while credits were granted to enable the Government to adjust their finances to the fall in income and to finance a limited programme of loan works.

But, reduction in the charges on some Government enterprises have still to be made, in order to bring them down to a level with other costs.

By the end of August, export prices rose by 30 per cent. For a complete recovery, a further rise is necessary.

The Commonwealth Budget estimates for 1933-34 show a net revenue of £55,330,000 and a net expenditure of £56,506,490, leaving a deficit of £1,476,490. The reduction in taxation operates only for a part of the budget year. The deficit will, therefore, be £4,848,000 for the two years, namely, the budget year and the following. But this may be set against the surpluses, totalling £4,860,699 for the two years 1931-32 and 1932-33. The surpluses arose out of the suspension of payments on account of War indebtedness to the British Government and to the swelling of customs revenue, owing to increased imports during 1932-33.

The reduction in direct taxation comprises the lowering of the company rate of income-tax from 1 sh. 4.8d. to 1 sh. in the pound ; a reduction in the personal exertion rate by 15 per cent. ; the special tax income from property from 10 to 5 per cent. ; and the arbitrary assessment in shipping abroad from 7½ to 5 per cent. In the land tax, a further reduction is made. The effect of these concessions will be to reduce interest rates, charged to industry.

Licensing of Wheat Exports

By way of implementing the International Wheat Agreement, some weeks ago, measures for the licensing of wheat export, in order to ensure that they did not exceed 105 million bushels, permitted under the agreement, were introduced.

It is now understood that such licenses will be granted to exporting houses, or pools, in proportion to the amount of wheat that such houses or pools have arranged to take from farmers during the present season, on condition that the houses, or pools, shall make their own arrangements for the purchase or storage of that proportion of the wheat, contracted for with the farmers, which is in excess of the amount licensed for export.

It is not clear whether the farmer would be able to demand cash for any supplies in excess of the export license, or whether the pool, or house, would merely undertake to hold the grain, on behalf of the farmer until the next season. But, in any event, the quantity of the excess supply in any house will be taken into account, when the following year's licenses are allocated.

CANADA

GLIMPSES OF PROSPERITY

The change in the economic outlook of Canada is, apparently leading her towards prosperity. The movement is, no doubt, slow. The Ottawa Agreement is hailed as having contributed in rescuing Canada from economic dependence upon the United States. In April last, the Canadian Premier paid a a visit to Washington. President Roosevelt sought for an understanding, in view of his Recovery Programme. He offered big concessions in favour of Canadian lumber and Agricultural products in the United States, in return for preferential treatment of American machinery, coal, steel, and chemicals. But, Canada preferred contacts with the sterling bloc, and, therefore, turned down the President's proposals. Whatever rise in prices occured in the United States, Canada automatically benefited, but without "codes", which have increased costs in the United States. Another advantage was that Canada was able to sell in foreign markets more easily than the United States.

The inflow of American money was also great. The crash of the Michigan Bank early in the year, and the subsequent rot in American banking, led to heavy deposits in Canadian banks. Again, the imposing or President's "codes" augmented further immigration of fugitive money into Canada.

The main items of achievements for Canada's prosperity are the reduction of unemployment by 250 thousands during the last five months; general increase in prices of farm products; steady improvements in Railway returns for the first time in two years; the favourable balance, for the twelve months ended August, of approximately £25,000,000; and the gold production of roughly £16 millions, during the current year.

But, in construction contracts and tourist traffic, Canada suffered reserves. In 1932, the total valuve of contracts awarded amounted to 2 million dollars. This year the total may not exceed 70 million dollars, as against the average, for the period 1924-28, of 384 millions, or the average, for 1911-20, of 294 million dollars.

The tourist traffic depended always very largely on American prosperity. Depending on the enormous proportion of the traffic before the slump, the Canadian Government spent large sums in constructing broad high roads. But, the American adversity intervened, and the American tourist vanished.

PRESENT DAY MOTOR INSURANCE PROBLEMS

IN THE UNITED KINGDOM

The present method of assessing motor insurance premiums in U. K. depends on the horse power of the motor vehicle and its value. There has been a growing opinion for several years past, that this method of assessing premiums is not a quite satisfactory one. Here the personal element, which in most cases is the chief cause of accident, is not at all taken into account. It is true that the horse power and value of the motor vehicle are factors to be considered, but they are of secondary importance. The value of the vehicle is necessary in determining the maximum amount of loss the insurance company may have to bear but it is only in very few accidents total loss results. By making the machine the basis of rating this method leads us to the inference that the machine causes the accident and not the man who drives it. There can be no doubt that in most of the accidents, it is the personal element of the driver that decides the root cause of the accident and as such any method of assessing premiums that takes this factor into account will alone be on the right lines.

The present method entirely ignores this element. A novice driving a small car of low horse power has got a much greater chance of producing accidents than an expert driving a costly car of high power. Yet insurance companies are prepared to cover the former risk at a much lower charge than the latter. This is an anomaly which the companies though fully aware of, yet tolerate for want of a better popular method. During the early history of the existence of motor insurance the companies in their keen competition against each other, introduced privileges and benefits, in their motor policies, which are to-day looked upon as unjust and inequitable. One of such privileges is the unrestricted driver. That is, the motor policy will hold good whoever was the driver (provided he possesses a license to drive) when the accident took place. Until recently the companies did not even care to know whether the driver had a previous black record or not. But now accidents occurring when driven by a driver with a black record are excepted. This does not exclude the novice driver who may not have black record simply because he had no opportunity to get one. The motor insurance proposal form can be satisfactorily answered by such a novice as it does not contain queries as to when, where and from whom the driving tution was obtained and as to the extent of his driving experience. And yet the novice is charged exactly the same premium as an expert. This is not equitable. There is no measure of the exact risk undertaken in each individual case. It is only on the principle of general average that insurance companies charge the same premium rates to all and offer the same privileges to all. This penalises those who have efficient and experienced drivers and who do not travel much, to the advantage of the opposite class.

But it may be mentioned that a solution to remedy this state of affairs is very difficult to find out. Many alternative methods have been suggested but almost all of them are either impracticable of application or do not command the confidence of the public. One method suggested is to take the amount of use made of the vehicle, as the basis of premiums. Vehicles which usually cover a longer mileage during the course of the year are to be charged more than those which cover shorter distances, all other conditions remaining the same. Insurance companies are already adopting this principle in their charging higher premiums to commercial vehicles assuming them to travel much more than private vehicles. The difficulties involved in adopting this method to private cars are too many. The only measure of the use is the speedometer and this may be easily disconnected by dishonest persons and besides, most of the speedometers are anything but accurate. So something far more accurate and foolproof than the speedometers has to be first invented for putting the "use" method into practice. Another method suggested is to assess the premiums, by the rates of repair charges of the accessories and parts of the car. That is, if the repair charges of a particular type of car will be heavy, then a higher premium is to be charged for this class of cars. Though this is a much better method than the former one, yet here also the difficulty of assessing arises when a third party only policy is required. A less costly repairable car is capable of running down a third person in just the same way as a car which costs higher for repairing. A third method suggested is that the premiums should be governed by the particular district in which the insured vehicle is to be used. The important difficulty in this method is due to the fact that private cars are usually used over an exceedingly wide area. In all these methods, the human element will be the dominating factor and this cannot be made the basis of assessing motor insurance premiums so long as the motor policy allows any person to drive.

Another important problem of the day to the Motor Insurance underwriters is the overwhelmingly increasing demand on account of passenger indemnity in private car insurance. During recent years the claims paid by insurance companies as third party passenger indemnity have so vastly increased as to make their trading profits very little thereby necessitating some of them to readjust and increase their premium rates. The Road Traffic Act is another menace to the motor insurance underwriters. Under this Act the companies may have to meet a much more heavy demand on account of pedestrians and persons, other than motor passengers, involved in motor accidents. Thus in all respects the liability of the company is increasing very rapidly and there is already a cry for the abolition of the free passenger indemnity cover offered to private car policies.

Prior to the war motor insurance policies never included a cover in respect of claims by passengers in the car at the time of the accident. It was assumed by insurance companies and car owners alike that if a person was being carried in a friend's car without any monetary consideration, he was doing so at his own risk. And if any damage or injury was caused to him while travelling, neither the motorist nor the insurance company was held liable. But immediately prior to the war, it was held by the English courts, in an important and then much talked of case, that the motorist was liable to pay damages to his co-passenger in such cases. This decision entirely changed the outlook of the insurance companies which in a high spirited manner began to include in their motor policies a free cover in respect of third party passenger indemnity. This privilege has since then been much abused to the detriment of the insurance companies. Collusion and fraud between the motor owner and the passenger resulting in loss to the companies, have since then been gradualllly growing. Sister

Insurance Section:

bringing an action against her brother, relatives against relatives and friends against friends, alleging that their injury was the result of negligent driving, became very common. And in all cases the insurance companies had to pay the damages as the courts usually turned a deaf ear to the defence set up and granted judgment in favour of the plaintiffs. Thus the public have taken a mean advantage of the generous protection given by the companies and it is only now that the companies have begun to realise the dangerous situation brought about by their own action. The free indemnity cover against third party liability granted by the insurance companies was never intended to include this sister versus brother case.

Many companies are now seriously considering the methods to avoid such collusion and frauds. The only effective method, according to the "*Post Magazine And Insurance Monitor*", will be to abolish this free cover against third party passenger risks and to charge the car owner an extra premium if he needs such cover. This alone will not do in successfully preventing fraud, for many persons may pay this additional premium and then perpetrate the fraud. The car owner should also be made to bear a substantial portion (say 25 per cent.) of the damages that may be awarded to the passenger. That is, this kind of cover should be given only for 75 per cent. of the damages that may be awarded, in lieu of an additional premium. Then and then only will these fraudulent private car passenger claims will cease.

Before concluding this article it will be of interest to the readers to know the general nature of improvements that are to be given effect to, in the new 1934 models of various makes of cars. The motor insurance correspondent ("Petrol") of the Post Magazine and Insurance Monitor says that most of these improvements are steps in the direction of safety on the roads and as such will be welcome by the motor insurance underwriters. The various exhibits in the recent motor exhibition at Olympia have shown that the car designers have done something in the interests of road safety. Reform in the gear-box will be the most striking feature of the future car. The existing type of crash gear-box is abandoned in almost all the models. In its place we have one of the three new types of gear-box. The pre-selector or the self changing gear-box introduced a few years ago by the Armstrong Siddeley has now found favour with many of the designers. Secondly the Synchromesh design has simplified gear-changing very much and is now widely used. Lastly the free-wheel type of gear changing which is already very popular in U. S. A. is now gradually finding favour in United Kingdom also. This method has other advantages besides the easy gear-changing. The wear and tear and the petrol and oil consumption are greatly reduced and its freedom from skidding on slippery surface is a further great advantage. All these 3 new types of gear-box enable very easy gear-changing and consequently simplify driving to a great extent and do not divert the driver's attention from the road traffic around him. To the underwriter this is a welcome alteration as it is an appreciable factor in road safety.

The other features of the 1934 car will be the universal use of safety glass, bumper bars, electric warning signs, reversing lights and rear petrol tanks. The safety move in the new cars from the fire point of view are a master switch to the battery by means of which the whole electrical current can be instantly cut off in cases of emergency, the rear petrol tank being concealed in the body skirt so as to avoid fire danger in cases of rear collisions, and the electric pump feeding of petrol to the carburetter instead of the usual vacuum tank (which is situated near the hot engine) feeding. These improvements are sure to improve the road safety and will be much appreciated by the underwriters. The two new features that are detrimental from the underwriters' point of view are the installation of radio sets in some of the costly models and the yet another squeeze, given to the already over-taxed engine, to gain greater power, speed and acceleration.

ALLIANZ UND STUTTGARTER VEREIN INSURANCE CO., LTD.

From the Annual Report for 1932 of the above Company we see that the Allianz Und Stuttgarter Verein Insurance Company, Ltd., the largest and strongest Insurance Company on the Continent, can look back with satisfaction on the excellent progress made during the year 1932, a year of universal trade depression. The Company has Offices, Branches or Agencies all over the world.

Their Head Office for Fire, Motor Car, Accident and Marine Insurance is in Bombay under very able direction. In India they have Branch Offices, in Calcutta and Rangoon, and have Chief Agencies in Karachi and Madras and Sub-Agencies in every City of importance in India.

At the close of the year under review the Premium Income of this Company, after deduction of re-insurance premium, amounted to Rs. 15,00,00,000 (Rupees Fifteen Crores) and the Total Assets including Life Funds amounts to over 28.6 Crores.

In Claims it has paid in 1932 the vast sum of Rs. 7,48,72,413. The Company received one claim a minute night and day and every hour paid claims to the amount of Rs. 8,666. It is indeed a record to be proud of.

From the figures before us we feel that the Company has not only come to stay but in the next few years it will be a power in the Insurance World.

Its indisputable strength, magnificent organisation and above all promt settlement of claims will, we are confident, place the Company in the forefront of similar enterprises in this country.

STATISTICAL INFORMATION

FOREIGN TRADE OF MADRAS

The total value of imports from foreign countries into the Madras Presidency during October, 1933, was Rs. 1,26,00,466 against Rs. 1,31,82 685 in the corresponding period of the previous year showing a deficit of Rs. 5,82,219. The principal commodities that accounted for the deficit were: Instruments, apparatus and appliances and parts thereof Rs. 2,24,163 (−Rs. 1,51,527); fuel oils 619,943 gallons, Rs. 2,15,740 (−2,455,059 gallons, −Rs. 3,16,634); cotton, twist and yarn 413,280 lb., Rs. 4,11,148 (−282,010 lb., −Rs. 2,97,831); piecegoods, grey (unbleached) 1,103,681 yards, Rs. 1,82,276 (−1,406,861 yards, −Rs. 1,64,644); white (bleached) 1,734,295 yards, Rs. 3,83,697 (−1,466,168 yards, −Rs. 2,84,848); printed, dyed and woven coloured 1,098,548 yards, Rs. 2,39,846 (−906,521 yards, −Rs. 1,98,574); artificial silk Rs. 2,86,535 (−Rs. 3,36,164); other articles Rs. 67,00,967 (−Rs. 7,41,351).

The total value of exports to foreign countries from the Madras Presidency during Octobter, 1933, was Rs. 2,07,19,554 against Rs. 2,07,39,797 in the corresponding period of the previous year showing a deficit of Rs. 20,243. The principal commodities that accounted for the deficit were:—Coffee 10,920 cwt., Rs. 5,85,554 (−9,050 cwts., −Rs.8,25,224); tea black 3,069,612 lb., Rs. 26,29,492 (−467,404 lb., −Rs. 4,44,489); cotton raw 1,085 tons, Rs. 6,86,309 (−966 tons, −Rs. 6,64,054); tobacco unmanufactured 883,955 lb., Rs. 2,31,025 (−508,132 lb., −Rs. 2,90,927).

CALCUTTA

The overseas import trade of Calcutta in private merchandise showed an impovement in October, 1933, over September's figures, the value rising from Rs. 2.25 crores to Rs. 3.05 crores against Rs. 2.73 crores in October, 1932. Exports remained fairly constant, being Rs. 5.71 crores compared with Rs. 5.70 crores in September, 1933, and Rs. 5.65 crores in October, 1932.

IMPORTS

A comparison of the values of the principal imports with the figures for October, 1932, is indicated below, the figures in brackets representing the increase or decrease as the case may be:—

	In lakhs of rupees.	
Machinery and millwork ...	59	(+31)
Cotton goods	35	(−20)
Oils, mineral	21	(+16)
Iron and steel	16	(+5)
Other metals	14	(+1)
Hardware	9	(+1)
Electrical instruments ...	7	(level)
Liquors	6	(+2)
Tobacco	1	(level)

Almost all the principal commodities on the import side showed an improvement with the exception of cotton goods. The heavy rise in machinery and millwork was again chiefly due to larger imports of sugar machinery mostly from the United Kingdom. The total yardage of coton piecegoods shrank from 28 million yards to 14 million yards and the value fell from Rs. 41 lakhs to Rs. 23 lakhs. The heavy fall under cotton goods was mainly due to lesser imports mostly of grey piecegoods. The value of mineral oil rose from Rs. 5 lakhs to Rs. 21 lakhs due mostly to heavy imports of kerosene oil from Russia. There was no importation of wheat.

EXPORTS

The variations in the values of the principal exports as compared with trade of October, 1932, are indicated below:—

	In lakhs of rupees.	
Jute manufactures ...	241	(−10)
Tea	141	(+32)
Jute raw	83	(−24)
Seeds (non-essential) ...	29	(+23)
Lac	18	(+5)
Hides and skins ...	15	(−2)
Pig-iron	6	(level)
Grain, pulse and flour ...	5	(−5)
Coal	3	(−2)

Raw jute, tea, manganese ore and lac were largely shipped to the United Kingdom. Germany was the chief buyer of hides . Pig-iron as usual went to Japan and gunny cloth to the United States of America and the Argentine . The United States of America was the principal consumer of skins, and gunny bags went mostly to the Commonwealth of Australia . Rice which formed the bulk of the trade under the head "Grain, pulse and flour" was largely shipped to the Union of South Africa.

BURMA

The following report on the principal variations in the Foreign trade of the Province of Burma during the month of October, 1933, as compared with the corresponding period of 1932, shows ts follows:—

The combined value of Imports and Exports was Rs. 201,05, lakhs as against Rs. 181.01 lakhs, showing an increase of Rs. 20.04 lakhs.

IMPORTS

The total value of merchandise decreased from Rs. 80,96 lakhs to Rs. 65.85 lakhs. The following were the principal articles which showed decreases, the value and the amount of decrease being noted against each:—

	Value. Rs. lakhs.	Decrease. Rs. lakhs.
Machinery and Mill work—		
Mining machinery, other sorts ...	1.42	1.25
Textiles—		
Cotton Manufactures—Piecegoods—		
White	3.75	2.43
Coloured	4.76	6.97
Wool manufactures—		
Piecegoods	0.73	1.53

Fuel oil to the value of Rs. 2.48 lakhs was imported during the month as against Rs. 0.08 lakhs recorded in the corresponding period of last year.

Imports of kerosene oil in tins valued at Rs. 1.23 lakhs were recorded during the month under review, whereas there was no importation in October, 1932.

EXPORTS

The total value of Indian merchandise recorded during the month was Rs. 135.20 lakhs as against Rs. 100.05, showing an increase of Rs. 35.15 lakhs. The following articles accounted for the increases, the value and the amount of increase being noted against each:—

	Value Rs. lakhs.	Increase Rs. lakhs.
Grain, pulse and flour—		
Rice	42.54	1.13
Metals and Ores—		
Pig lead	18.45	4.49
Tin Ore	5.94	3.46
Wolfram ore	10.35	5.04
Zinc, spelter, all sorts ...	4.57	3.07
Paraffin wax	31.29	19.67
Wood and Timber—		
Teakwood	3.50	1.98

There was practically no export of paddy during the month (the value recorded under this head being Rs. 375 only) as against Rs. 1.47 lakhs in the corresponding period of last year.

Coton raw to the value of Rs. 2.55 lakhs was exported during the month under review as against Rs. 4,13 lakhs recorded in October, 1932.

JAMNAGAR & DWARKA RAILWAY

The gross earnings of the Jamnagar & Dwarka Railway during the month of August, 1933, amounted to Rs. 1,02,770 as compared with Rs. 1,31,470 during the same month of the previous year. The working expenses during the month amounted to Rs. 85,457 as against Rs. 72,267 during the same month of the preceding year leaving a net income of Rs. 17,343 as compared with Rs. 59,203 last year. The total coaching and goods earnings during the month amounted to Rs. 56,023 and Rs. 36,826 as compared with Rs. 65,842 and Rs. 53,494 respectively during the same month of the last year.

The cumulative gross earnings, working expenses and the net earnings for the period from 1st April to 31st August amounted to Rs. 6,02,694, Rs. 3,75,798 and Rs. 2,26,896 as compared with Rs. 5,97,269, Rs. 3,62,564 and Rs. 2,24,705 respectively during the corresponding period of the preceding year.

The percentage of working expenses to the gross earnings during the month under review was 83.15 as against 54.96 during the same month of the last year.

COMPANY REPORTS

NUDDEA MILLS CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	66,79,500	Block (net) ...	82,94,164
Debentures ...	36,80,000	Jute ...	24,53,695
Reserves ...	15,76,034	Cloth & Bags ...	1,55,274
Other Debts ...	3,19,517	Stores ...	1,82,861
		Outstandings ...	4,10,069
		Investments ...	1,90,625
		Cash & Deposits	2,41,196
		Profit & Loss ...	3,27,167
Total ...	1,22,55,051	Total ...	1,22,55,051

Extracts from Directors' Report:

Report for the half-year ended 30th September, 1933.

The profit of working before providing for Debenture Interest and Depreciation is Rs. 3,55,132-12-8. Deduct—Debenture Interest Rs. 1,28,800. Depreciation Rs. 1,61,704-11-11, equal Rs. 2,90,504-11-11 balance Rs. 64,628-0-9. Add Dividends forfeited Rs. 839, total Rs. 64,467-0-9. Deduct—The Balance at debit of Profit and Account brought forward from the previous Account Rs. 3,92,633-9-6, leaving at the debit of Profit and Loss Account Rs. 3,27,166-8-9, which it is recommended should be carried forward.

Stock of jute has been entered at or under cost prices and stock of fabrics at contract rates.

The Company's mills continue on the single shift system, and in accordance with the Indian Jute Mills Association's Agreements worked 40 hours per week.

Hon'ble Mr. J. S. Henderson being absent from Calcutta does not sign the Report and Accounts.—G. W. Leeson, R. N. Mookerjee, W. A. M. Walker, D. Inglis Duff, Directors.

CONSOLIDATED TIN MINES OF BURMA, LD.

The operations for the year ended 30th June resulted in a net surplus revenue over expenditure of £13,301 (against £4,042 for 1931-32). This surplus extinguishes the debit balance brought forward and leaves a credit balance of £281 to be carried forward. Against current liabilities of £9,000, floating assets amount to £55,000. The latter figure excludes interest in subsidiaries standing at £57,937; the Auditor's report is given subject to the value of the interest in these companies, the main assets of which consist of shares in the parent company. The Directors state the liquid position has been considerably strengthened since 30th June by the partial raelization of the interest in the subsidiaries and that the available resources are considered adequate to meet the demands of a forward policy.

The improved results, the Directors point out, have been achieved notwithstanding the continuance during the greater part of the year of adverse conditions in the tin mining industry. The accounts, they add, bear testimony to the effectiveness of their conservative policy since the inception of the economic depression which has permitted a concentration of effort upon the reduction of costs. Production of mixed concentrates declined from 1,329 tons to 1,144 tons. "All-in" costs per ton were £62 19s. 1d. (against £61 4s. 7d.), but it is stated that the full significance of economies in relation to tonnage costs is less apparent by reason of the lower output and higher Government royalties and smelting charges—which are based on metal values. The average price realized for mixed concentrates rose from £63 18s. 2d. to £73 12s. 8d. per ton.

A systematic programme is now being considered for the future development of the properties on scientific lines. Whereas in the past measures for extending the scope of mining operations have through force of circumstances been held in abeyance, the Directors feel justified, in view of the improvement in price of tin and wolfram, in supplementing the normal sluicing and monitoring operations by the erection of a small milling plant at the Hermyingyi property.

BOMBAY, BARODA AND CENTRAL INDIA RAILWAY CO., LD.

In addition to the half-year's guaranteed interest of 1½ per cent., an interim dividend of 1½ per cent. has been declared in respect of the year ending 31st March next, payable in January, 1934.

The distributions a year ago were the same.

BRITISH BURMAH PERTROLEUM CO., LD.

A cable summary of the Annual Report of The British Burmah Petroleum Company, Limited, shows that there was a trading profit of £65,494 during the year as compared to £68,456 in the previous year.

Adding to this profit Interest profit on sales of securities and sundry receipts and deducting charges Debenture interest, depreciation, income tax, etc., the net profit shown is £34,376. Adding last year's balance brought over the disposable profits are £42,896. Setting aside the annual quota for the Debenture Sinking Fund of £41,562 only £1,333 remain which are carried forward.

The Directors regret they cannot declare any dividend.

The world market conditions and the high internal taxation, which virtually has removed any protection to the indigenous oil industry has compelled the Company to drastically curtail its development programme though its efforts in the development undertaken in Germany and in South Africa continue in association with foreign interests and in Germany during the year 1,700 tons of Crude Oil of high quality was won.

BENGAL-NAGPUR RAILWAY CO., LD.

Gross receipts again declined last year, the total for the 12 months ended 31st March being Rs. 6,87,76,376, against Rs. 7,22,25,462 in 1931-32 and Rs. 8,08,94,838 in 1930-31. Working expenses, however, were reduced from Rs. 6,11,26,262 in 1931-32 to Rs. 5,05,03,316 in 1932-33, with the result that net earnings were Rs. 71,73,860 higher at Rs. 1,82,73,060. Interest on the Secretary of State's capital and on the company's capital and debentures together absorb Rs. 2,78,21,022, so that there are no surplus profits to divide between the Government and the company. Shareholders received last July 1¼ per cent. as guaranteed interest for the first half of the year and an interim dividend from reserve of ¼ per cent. In addition to the second half of the guaranteed interest of 1¼ per cent. payable on 1st January the Directors recommend a further dividend of ¼ per cent. from the reserve, thus making a total return for the year of 4 per cent. (unchanged). After providing for the dividend now recommended and for other authorized expenditure the reserve, taking securities at their present market price, will stand at about £62,000.

BURRA DHEMO COAL CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	8,12,500	Block (net) ...	7,58,891

Total ...	9,00,142	Total ...	9,00,142

Extracts from Directors' Report:

Report—For the half-year ended 30th September, 1933.

Revenue Account shows a loss for the half-year of Rs. 14,032-13-0 resulting in a balance of Rs. 10,229-12-5 at the debit of Profit and Loss Account, which is carried forward.

Raisings and despatches were lower than in the previous half-year, and owing to an accumulation of stocks the Colliery was closed down for two months during the period under review. Stocks have now been reduced considerably and raisings have been resumed.—J. H. S. Richardson, David Ezra, J. S. Ker, Directors.

NEW TETTURYA COAL CO., LD.

Synopsis of Balance Sheet:

Assets.	Rs.	Liabilities.	Rs.
Capital ...	3,48,330	Block (net) ...	16,11,448
Debentures ...	1,00,000	Coal ...	3,253
Other Debts ...	13,25,964	Stores ...	5,990
		Outstandings ...	26,970
		Cash ...	875
		Profit & Loss ...	1,25,758
Total ...	17,74,294	Total ...	17,74,294

Extracts from Directors' Report:

Report—For the half-year ended 31st August, 1933.

The loss carried forward from last half-year is Rs. 1,07,455-12-4, to which has to be added:—Loss for this half-year Rs. 14,301-14-9, Debenture Interest Rs. 3,500, total Rs. 18,301-14-9, there remains a loss to be carried forward of Rs. 1,25,757-11-1.

The Managing Agents have decided to forego their Agency commission and to waive all interest charges for the period under review.

Sales.—The Colliery continues to work at half capacity only.—Shaw Wallace & Co., Managing Agents.

THE SUGAR INDUSTRY IN BENGAL

In the last issue of the Supplement we ventured to appeal to prominent industrial and commercial magnates of Bengal to exert themselves to realise the vast potentialities of this province in the sphere of the cultivation of sugar cane and the manufacture of sugar. Our appeal was based not on mere grounds of sentiment that this province should not lag behind others in what is assuredly, becoming one of the staple industries of this country, but on a calm and careful appraisal on the commercial possibilities of sugar manufacture in Bengal. We were glad that we could commend the establishment of sugar factories on other grounds as well. We stated it to be our considered opinion that the enlargement of sugar cultivation and the establishment of sugar factories in this province, would solve a number of problems besides the purely economic, and even within the economic sphere, they would afford much-needed relief to the cultivators and manufacturers of jute. On the social side, it would relieve, to some extent, the vast unemployment among the middle classes, ameliorate the conditions of Bengal agriculturists. And as the new sugar concerns prove to be a success, Bengal would be able to overcome the defeatist mentality which, in large part, is the cause of the lack of sympathy between this province and the industrial provinces of Western India. Thus, we made it clear that, on the one hand, social and political considerations should impel Bengal to explore the possibilities of expanding her industrial production and, on the other, the conditions of her staple industry, namely, Jute, require that the restriction of jute acreage, which the experiences of the past few years show to be necessary, must be compensated by turning the surplus land to the cultivation of a different crop. Here, sugar is clearly marked out as the most appropriate choice that can possiby be made.

We are glad to find that our appeal for the establishment of the sugar industry in this province has since been strengthened by the Government of Bengal by the recent issue of a pamphlet entitled *Sugar in Bengal*. Besides giving a short history of the sugar industry, it has gone, in some detail into the possibilities of sugar-growing. The pamphlet emphasises at the outset that Northern India, in all probability, was the home of sugar cane and that some of the earliest historical records make reference to the attempts made by neighbouring foreign governments to learn the cultivation of sugar cane and the manufacture of sugar from the agriculturists in India.

It might be thought that to dwell on this fact has little significance, if not relevance, to the problem on hand of initiating and making a success of new industrial ventures. It is true that sentimental admiration of the past is not of much help when one has to put one's shoulder to the wheel. But it has certainly a large place in creating an active desire for the establishment of the new industry. It would go a long way to persuade people that, if Bengal has, during the recent times, kept out of this sphere, it is more because of the general apathy and ignorance, than because Nature has forgotten to endow her with the requisite resources. With the spread of the knowledge that there was a time, when Bengal and the adjoining provinces were the inventors of the cultivation and manufacture of sugar and that the natural resources, which enabled that achievement in the past, continue unmitigated to the present day, there will be, we are sure, greater readiness to view the prospects of the sugar industry in a rosy light and to accord the industrialists, who may initiate new ventures, the necessary popular support. Amongst a people noted for their emotionalism, it would not be purposeless to recall the remarks of Bernier who visited India in the latter part of the 17th century: "Bengal abounds in sugar with which it supplies the kingdoms of Golconda and the Karnatik, where little is grown, Arabia and Meso. potamia through the towns of Moka and Bassora and even Persia by way of Bander-Abassi.

The pamphlet issued by the Government also emphasises the fact that the real reason for the disappearance of the sugar industry was not so much the incapacity of Bengal sugar to compete with the products of other provinces or those imported from abroad, but the gradual supercession of sugar by the golden fibre. It is true that the import of cane and beet sugar from foreign countries, together with the disappearance of the religious prejudices against the use of white sugar, created a condition, in which Inlian refineries found it increasingly difficult to hold their own. But while in the other parts of India the old established firms have retained life sufficiently to be able to take advantage of the newly levied protectionist duties for a fresh lease of life and fresh expansion, Bengal has hardly any such nucleus for further development at the present stage. This phenomenon can be adequately accounted for by the fact that jute actually invaded the territory of sugar cane cultivation and that with the spread of jute cultivation, the sugar cane from Bengal decreased; and "the decrease was so great during the last thirty years that the area under sugar cane has been reduced by half, if not more."

We have dwelt at some length on this aspect of the extinction of the sugar industry in Bengal only to carry conviction to investors that the possibilities of sugar industry in this province should not be surmised merely from the fact that there are at present no factories in actual working and that while other provinces have been quick to establish new factories, there has been no such stimulation of activity here.

It is, indeed, disheartening to note that while "there are about 12 sugar factories in the United Provinces and 11 in Bihar and Orissa, 6 in Madras and 2 in Bombay, there is not a single factory in Bengal". But no rash conclusions of unsuitability should be made from these facts. In their report to the Government of India on the sugar industry, the Tariff Board discussed at length the possibilities of starting sugar factories in Bengal. The Bengal Agricultural Department has been emphasising in successive years in their annual reports that there are other places where the surplus of cane remaining after fully meeting the demand for *gur* can feed a number of factories in Bengal.

The total area under sugar cane in Bengal is reported to approximate to 2 lakhs acres and the normal yield of gur is at 37 maunds per acre. But thanks to recent experiment and the introduction of improved varieties of cane by the Agricultural Department the yield has increased to over 50 maunds per acre. Even at the lower estimate of 37 maunds of *gur* per acre the total production of cane gur comes to 7,400,000 maunds. It has to be remembered that in Bengal sugar is derived from three sources, namely, sugar cane, date palm and palmyra. The last mentioned yields a negligible outturn; and the yield of date palm is estimated at about 2.8 million maunds making a total of 10.2 million maunds.

What will, perhaps, most appeal to the cultivator is that the changeover to sugar-cane cultivation would mean a relief in toil both for himself and for his animal stock. Though the average cultivator may continue even after the establishment of factories to make his own *gur*, it is certain that he will not attempt through these primitive processes to meet the needs of more than his own family or a few of the neighbours. There would thus always be a large excess of his product which will be available for sale to the factories. If the sugar-cane is thus made over to the factories it will free the cultivator's bullocks at a time, when he requires them for land preparation for *kharif* crops and will relieve them from the exacting work of cane crushing, which is just as hard as puddling, particularly when it is remembered that in the crushing season there is a scarcity of green fodder or grazing grounds for his cattle.

The incidence of a large expansion of sugar manufacture in Bengal on middle-class unemployment is too obvious to need any elaborate exposition. In fact, it may be said of the sugar industry that its establishment in Bengal is suggested by every imaginable consideration. Viewed from the standpoint of immediate need, it might almost be said to be a necessity. In the long view, it is a certain means of enriching the province as a whole and of utilising the resources with which it is endowed. It affords valuable help in the solution of the problems that now face the jute industry. It is capable of mitigating the middle-class unemployment which has already begun to manifest itself in evils which will not be restricted in their corrosive influence to the borders of this province, alone. Sugar offers a sphere in which Bengal might develop without the fear that it will have to stand the competition of older and more organised producing units in other provinces. For a long time past muct valuable preparatory work has been done by the Agricultural Department. Every day the Department is searching for better canes than have already been put out. There has been for a long time a cry that investment in land has hardened into an irrational habit amongst the wealthier classes of this province, and that at the same time it is not so easy for men of capital in Bengal to find out avenues for investment or scope for the business talent of the youngmen. Sugar offers a supreme opportunity; and there is every reason and hope that Bengal would grasp it and turn it to the best advantage of herself and the country.

SUGAR IN WORLD MARKETS

INDIA

Calcutta.—For the past several weeks the market here is ruling quiet but steady. The values have remained almost unchanged with only a small day-to-day fluctuations. The steadiness visible is due to the very low stocks of Java sugar in Calcutta, and the absence of indigenous product due to the season in India having not started, whereas the quietness is due to very poor demand and the anticipation of Indian sugar in the next month, at rates probably lower than those ruling in the market.

Bombay.—Steadier conditions have ruled in the Bombay market in contrast to those prevailing in Calcutta. This is due to the still smaller stocks. Ready stocks are at a premium of about 2d. per cwt. over the named steamers to arrive, while the latter are at a premium of 1d. to 1½d. per cwt. over the forward positions. Indian product not affecting the Western markets directly the values are always determined by Java prices and ready stocks.

Karachi.—Like Bombay the Karachi market has also ruled firm for spot and named steamers, but quiet for shipments and forward positions.

Stocks in Indian Ports.—The estimated stocks in main Indian ports at the beginning of the month are very much lower than what they were at that period during the past year. They are:

	1933 Tons	1932 Tons

New York.—During the last month and earlier part of the month, very steady conditions prevailed in the New York sugar market, and prices were several points higher on balance. It was due to the depreciation of dollar in a very short way. The rise, however, could not be long maintained and towards the close there was a sharp decline of 13, 12 and 11 points in December, March and May positions respectively. The decline was due to long December liquidation and the failure of the quota scheme.

London.—Due to unfavourable sterling-dollar exchange and December liquidation, sugar values eased off considerably and were on balance lower by 3½d., 2½d. and 2d. per cwt. for December, March and May positions. The premium over the readies to March and May positions has gone up by 2d. The long instead of cancelling their commitments have switched them off to these positions.

Java.—Quiet conditions have prevailed in the trade with an easier undertone. The quantity of business passing is rather small. The values on balance are lower and are quoted 4.45 for the West Coast and 4.75 for the East Coast of India. Nivas was, however, able to dispose off about 24,000 during the first week of November out of which 15,000 are for India. The December freight rates for India have been extended for January, 1934.

Despite the increase in the production of sugar in countries outside the Chadbourne Plan the statistical position is becoming sounder. The area under cane in Java is given as 34,900 hectares indicating a crop of 500,000 tons against 1,388,000 tons this year. A further reduction to 300,000 tons is being antici-

pated in 1934-35 with a view to eliminate the entire existing stock by April, 1936. The present estimated stock in Java is about 2.5 million tons.

JAVA

for the period ending 1st November, 1933

Terminal Markets were irregular without showing any pronounced tendency. After a small improvement, values in *London* eased off and close at about 1¼d. below last level. In *New York*, quotations show a small gain on balance of from 2 to 3 points. The ups and downs on *exchange* markets continued, on the whole rates tended downwards, which tendency was accentuated yesterday when the London/Amsterdam crossrate sagged about 10 points.

The Java Sugar Market continued in an uninteresting state with an easier undertone. In the *Second Hand* minor transactions were closed, the volume of which was even smaller than during preceding weeks. The *Nivas* managed to dispose of about 24,000 tons, of which about 8,500 tons rejected sugar for local consumption. Limits were subject to small fluctuations, more or less in conformity with the movement of the £ Sterling, and were at the close *f* 4.55 for the West Coast and *f* 4.75 for the East Coast of India. Although demand from China is at present more than disappointing, no alterations of the Nivas limits for this quarter have been announced so far, Superior being still held for *f* 5. f.c.

British India. Business has been done on a moderate scale both for East Coast and West Coast destinations at slightly below Java parity. Demand is still very restricted and confined to prompt shipment, preferably by named steamers, forward positions being wholly neglected. Indications received during the last few days point to a still lower level of prices locally, which however has not yet been responded to by the Nivas.

We are advised by the *Java-India Conference Lines* that their rates of freight for shipment up to end of December will also apply to shipments during *January, 1934.*

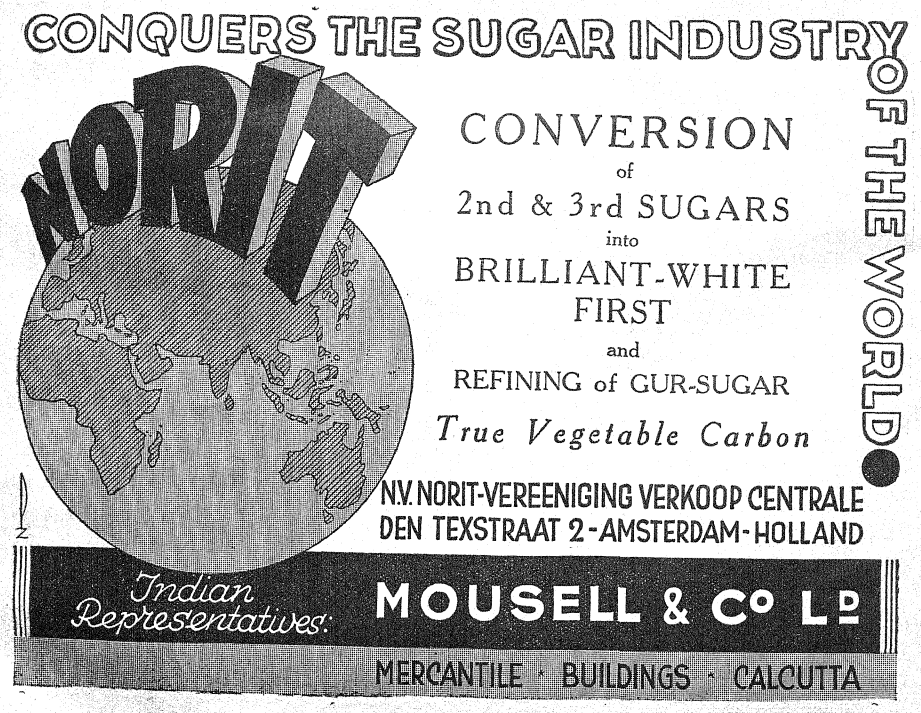
Hongkong/Shanghai. No interest whatsoever has been noticeable although stocks do not seem to be up to the usual level.

Japan. Business is hampered by the unfavourable exchange, nevertheless a line of 5,000 tons Browns for refineries has been done at a small increase in price, compared with the preceding transactions.

LONDON.

Nov. 5.

A further loss of ground in Sugar has been registered during the period, once more substantial in America and slight here. New York Futures lost an average of 10 points, equal to about 5d. per cwt. compared with an average of 2d. per cwt. on the London market. Correspondingly, the inter-market parity table discloses a further narrowing of New York's premium over London, which reflects the scope of the realisation of the existing Cuban preference rights in America of 50 points. The London market has been only very slightly favoured by the Dollar exchange movement which, after intermediate fluctuations between 4.41 and 4.60, receded at the close to 4.52, implying only a 5 cents improvement of the Dollar on the week. On the other hand, London Terminal December liquidation entered a more active stage and assumed a trend somewhat unfavourable to "longs." Instead of 1d. spread evidenced a fortnight ago between December and the next active month, March, we now see a premium for the latter month of 3d. to 3¼d. per cwt., with corresponding increases of the spread against positions further ahead. The widening of the difference is promoted by "long" interests taking free, and



almost universal, recourse to switches of engagements to positions further ahead, instead of simply cancelling them. The note of hopefulness for a brighter outcome of these operations still predominates sentiment and dictates that course. In the present circumstances and in face of anticipations that world affairs in general look like coming to a head in the near future, and may alter a great number of things in business life, the persistence of holders of Sugar to await events is not unnatural.

The prospects of nearby Sugars are undoubtedly suffering from buying abstinence on the part of U.K. Refiners. However, this is a seasonable feature, the importance of which does not need to be exaggerated. Compared with this time last year, Refiners are no better supplied with Raws, taking the combined total stocks in the United Kingdom and contracts booked ahead. Home-grown sugar production, the extent of which was estimated last week to amount to 425,000 tons white sugar, shows an excess of 89,000 tons over last year's output, which excess, however, is offset by prospective smaller arrivals from Natal and preferential sources as a whole.

The sharp decline on the other side of the Atlantic is a natural outcome of the abrupt dissipation of expectations of imminent enactment of inflationary measures, or at least its alternative, a rise in prices in consequence of the series of Government measures taken in the economic field. Also, the American sugar trade looked forward so much to changes in the scope of the Cuban duty preference in the United States that a sudden reverse in prospects created an anti-climax, very fateful for an over-bought market. During the period not merely New York Futures, but the actual "spot" market receded sharply, namely, from 1.37 to 1.20 basis cost and freight New York. The Philippines, which up till now kept back with sales of new crop, appear once more on the scene as active sellers, and also Cuban interests abandoned their selling reserve.

This, as far as the momentary position is concerned, is the aspect of things as can be foreseen for the next few days. The momentary position, however, is by no means a criterion for the appraisal of prospects, not merely in the distant, but in the near future. Inflation or fresh revolutionary measures in American business life, which now appear to be off the slate, may return as active factors practically overnight, driven once more to the forefront by forces called to life in the course of the great campaign inaugurated by the Administration last March. An entire change of front is also possible on the question of American treatment of Cuba. Things in the Island are still very unsettled and United States intervention, with which the granting of benefits to Cuba is habitually associated, is always an event which can be considered near at hand. That is why bullish or bearish sentiments in sugar, in normal times habitually traced to individual conception of the merits of the one or the other sugar factors or influences, have now very little meaning in themselves. The structure of the world problems as a whole is too complicated and vast to be embraced by traders or brokers in a given commodity and to be utilised as a practical basis for activities in business. Trading operations are now necessarily traversing a blind alley, the exit from which may be found in circumstances of any description.

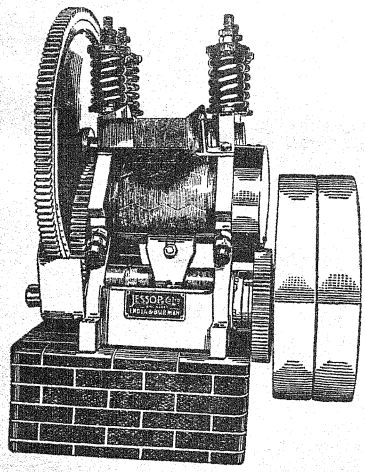
DESIGNED AND MADE IN

INDIA



SPECIAL FEATURES:

Unbreakable Side Frames of Solid Steel. Top Roll Running in Roller Bearings. All Shafts in Ball Bearings. Machine-cut Gears in full contact unaffected by adjustment of rolls. Spring-loaded Top Rolls. Trash turner with simple adjustments.

STANDARD SIZES:

3 Roller 10″ × 14″ Output 40/50 mds. per hour. Extraction 67/70%

6 Roller 10″ × 14″ Output 70/90 mds. per hour. Extraction 72/75%

Our fully detailed Catalogue No. 325 giving further information will be forwarded to you on application.

JESSOP & Co. LTD

INDIA & BURMA

ESTABLISHED IN CALCUTTA 1799.

Head Office: 93, CLIVE STREET, CALCUTTA.

London registrations in the period amounted to 29,300 tons, bringing the total since the 2nd January to 2,071,150 tons.

At the outset, an upward revision of the Refiners' prices for refined grades was anticipated, but did not materialise; in consequence, trade demand was sluggish, although holdings in the hands of distributors are supposed to be small. That this is so, is indicated by active withdrawals on old contracts. Messrs. Tate & Lyle's prices remain at 18s. 9d. for Standard Granulated, 18s. 3d. T.L.P. ex Refinery (T.L.P. ex Wharf, since about a fortnight ago, has been a totally nominal denomination, Refiners having withdrawn as sellers). Business in export of British Granulated has been quite satisfactory although strictly confined to immediate or prompt shipment.

In the section of Raws selling to Refiners, very little business transpired, due chiefly to buying reserve maintained by Refiners as well as by scarcity of first-hand offers. Earlier in the week some parcels were reported done at 5s. 1½d. for December shipment, second sellers later reducing their price ideas to 5s., and in some isolated cases to 4s. 11½d.

SUGAR INDUSTRY "ANARCHY"

BIG PRODUCTION RISE SINCE WAR

"The state of the sugar industry illustrates very clearly the general disorganisation of industry caused by the war all over the world," says the National City Bank of New York in its monthly "Review" for October.

About 70 per cent. of the sugar-making capacity of Europe, the Review continues, was destroyed during the war, causing a rise of prices which stimulated an excessive development of new capacity. Thus the sugar production of the United States and its insular territories increased from about 2,000,000 tons at the end of the war to over 4,000,000 tons in the present year.

Japan and India had previously supplied less than one-half of their own consumption, obtaining the remainder from Java. Japan is now fully self-supporting (from the Island of Formosa), and is reported as exporting some sugar.

Indian Development

The situation in India was described recently as follows:—

"Rapid developments of the sugar industry in India have produced a situation of international importance. In the 1931-32 season, 30 factories were working in India; in 1932-33, some 27 new factories came into operation, and 53 new factories are in course of construction for the present season, 1933-34. Calculating the prospective outputs of the 110 factories, it is estimated that they are capable of a production this season of 950,000 tons, equal to the total Indian home and import requirements last year."

Italy, Spain and France, formerly importers of part of their supply, are now self-sustaining.

Strange Case of Britain

One of the strangest cases is that of Great Britain, which has expended about £20,000,000 in the last eight years in subsidising the establishment of a beet sugar industry in England, although the cane sugar industry of its own colonies has been in dire straits. This policy of Great Britain towards its colonies has been identical with that of the United States towards Cuba, although the production of England had excluded Cuban rather than colonial sugar from the home market, while contributing to the general excess.

In all, this post-war expansion of sugar production in the face of existing over-production has curtailed the aggregate of sugar exports to the amount of about 6,000,000 tons, Cuba and Java being the chief sufferers. It has destroyed the purchasing power of sugar-producers everywhere.

Where Responsibility Lies

"No single word describes the sugar situation so well as anarchy," the "Review" says, "and before

TEA TOPICS

Australian Market.

A Trades Correspondent writes:—

A very weak point in India's export of tea is Australia; and the explanation is simple. Java and Sumatra are customers of such importance for Australia's agricultural products that Australia has naturally preferred to take her tea from them. At the first glance, it would seem as if the Indian representatives at Ottawa had overlooked this point, as the Indian import duties on groceries are 25 per cent. and there is no preference for British and Colonial produce. But India is also an agricultural country and Australian butter, for example, would be a deadly competitor if allowed in at a mild rate of duty. Still there is the problem; and the question is: what is the tea industry to do about it? Australia, as everybody knows, is a great tea drinking country. Her imports up to March 31, 1933, for twelve months amounted to 48,190,073 lbs. made up as follows:

Java	...	...	28,020,480
Sumatra	...	...	2,601,986
Ceylon	...	...	15,875,650
North India	...	...	1,680,865
South India		...	11,092
			48,190,073

So that of this large trade India is able to secure only 3 1/3 per cent. and this percentage is probably too great as it will be seen that no figures of China tea are included.

There is another serious handicap for India in the fight for the Australian trade with Java, and that is the geographical aspect of the case. A glance at the map will show that the distance between Batavia with the length of voyage from India. Added to this and the Australian ports is a mere nothing compared fact the shipping facilities between Australia and India are poor. But the shipping companies are clearly not to blame for this. If there was a demand for space nothing is more certain than that it would be forthcoming; freight is what shipowners are looking for. But a couple of million pounds of tea in a year is not particularly tempting. Naturally the Tea Cess Committee have all these facts and a good many more in mind. But what they are doing in the matter we must reserve for our next article, when we propose dealing with the activities of the Committee in question.

One point arises and it is a serious one. As a popular article, Indian tea can beat Java tea every time, judging from the demand for Indian tea in Great Britain. But has the taste for Java tea become a settled habit with the Australian public, and will it be possible to wean the people from it? But apart from this tea, Java has not been idle. It is generally acknowledged that tea grown in a tropical country such as Java, can never be of such high quality as tea grown in a subtropical country like the Indian tea districts. But any tea taster of experience will admit that Java and Sumatra teas at the present time compete in quality with the grades that come from Silchar and Cachar, and blenders are perfectly aware of that fact. Moreover the Java people have paid great attention to grading, and every benefit that science can yield has been devoted to the industry. The result is a bright marketable leaf that cannot be ignored as a competitor.

Sterling Tea Shares

There has been an enquiry in London for tea shares, due in part to the decrease in stocks which is beginning to take concrete form due to the restriction scheme and also to the better prices that tea is getting in Mincing Lane. There have also been *ad interim* dividends declared which have cheered shareholders and made their banking accounts healthier.

But the situation as regards Sterling Tea Shares is a very curious one. It is doubtful if there is any section of the Stock Exchange that can tell of more tightly held shares than tea. Many of the companies came into existence a few years after the Mutiny, and big blocks of the shares are still held by descendants of the original subscribers. They have seen the companies prosperous; they have seen them in the doldrums. If the tea trade is bad, they argue that the situation is only temporary; and they hold on. That is why when there is a slump, so few of these shares come on the market. The shareholders tighten their belts, move into a smaller house perhaps; but they hang on to their tea shares.

Take for example the slump that occurred after the South African War. Tea had a fearfully bad time then. But few shares came on the market. The same thing happened when the slump occured in 1921. Widows and orphans who hold shares may receive a report from the agents to say that the dividend has been passed, or reduced to a miscrosocopic amount. They grieve over the matter but calmly await better times. Anyone who has had the exprience of attempting to sell tea shares on the London market will bear witness to the correctness of these remarks. When there is a demand there is a but a limited supply both for the buyer and the seller, whichever happens to be in the market for his special purpose.

Malaria Control

In the last issue of the Industries Supplement brief allusion was made to Major Gordon Covell's book on this subject. But space being limited the full notice had to be held over. The book is not a very large one and covers a matter of 150 pages. But the author continues to cover every aspect of the subject and it is not too much to say that every tea garden in India should possess a copy. In fact, every industrial concern employming labour should study the book; for it is self-evident that a diminution of malaria among the working units must more than repay any expenditure devoted to mosquito destruction. In Major Covell's book, every device that has ever been advocated is analysed. For example he has a useful chapter on drainage helped out by illustrations.

On the subject of oiling he is encyclopaedic. Every preparation on the market is criticised and the

THE INDIAN TRADES EXHIBITION TRAIN

India is a land of distances and swadeshi enterprises feel the difficulty of making their products known through the vast country. The idea of exhibition trains is not new, but this particular one is run on liberal lines and has proved of great benefit to manufacturers. The train consists of nine bogies and accommodates twenty two exhibitors. Mr. M. H. Ismail, the Managing Director of the Indian Trades Exhibition Co., Ltd., is personally in charge of the train. This is the first occasion it has visited Bengal; previously it has traversed the United Provinces, and the Punjab; the present tour will conclude its activities next March. It started on the 15th October. During the journey it will visit 90 centres. Retail sales are allowed; a percentage of sales being paid to the Company. The Governor of Bombay saw the train started; and practically all Ruling Princes have visited it while passing through their dominions. Among these may be mentioned the Nizam of Hyderabad and the Maharajas of Mahanagar, Kolhapur and Ratlam. On the last tour, the retail sales on the train amounted to Rs. 3,26,212.

One point of interest is the very satisfactory results obtained by a group of Bombay cotton mills, the success obtained eliciting a testimonial from the Secretary of the Millowners' Association.

Among the more interesting of the exhibitors may be mentioned THE ELGIN LEATHER WORKS —the products are well finished and designed. A clever travelling device designed and made by them is a Wardrobe Trunk called the HUSAIN FULLKIT. This trunk will accommodate six suits of clothes on hangers and every detail of kit required when travelling. Readers should send for a descriptive pamphlet of this very clever device. The firm makes travelling cases for shoes to take 4, 6, 8 and 12 pairs, a great convenience. Attache' cases with files may be mentioned. But a fitted blouse case with a removable inside case is really most attractive; it is made in beige imitation crocodile. But we must not omit and mention a most attractive polo saddle made by this Company. Apparently it has won its way into the affections of polo players on the Bombay side. It is light, elegant and workmanlike. The Company's goods are an eloquent testimony to Indian workmanship and originality. The address is Elgin Leather Works, 109, Esplanade Road, Fort, Bombay.

The Nizam of Hyderabad's Cottage Industries have an interesting exhibit. The most attractive item being their carpets and rugs which are above the average in manufacture or design.

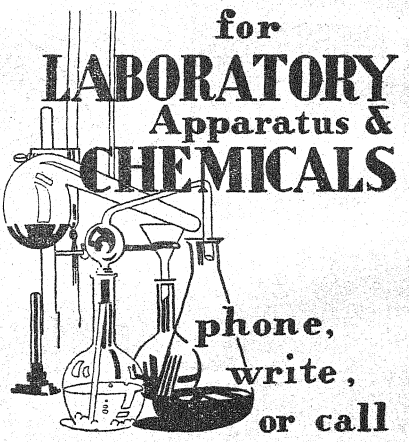
Parry & Co., Ltd., Madras had a show of their boled sweets. As far as we know Parrys are about the only people in India doing this trade which is so universal in Europe. The varieties shown on the train are admittedly only special varieties. It would be worth any dealers while to write for particulars. The goods are readily saleable and fully equal to the best imported sweets.

Sathe Bros., Poona showed biscuits. The varieties shown are well made and we were informed that agencies had been opened up all over the country.

Nastaliq Type. This is the result of a scheme sponsored by the Government of His Exalted Highness the Nizam to produce Urdu and Persian script in type. The result is certainly very beautiful and a book printed in 30 pt. Nastiliq or 24 pt. Suls would be an artistic production. Printers in Vernacular should write for particular to the Osmania Type Foundry, Government Central Press, Hyderabad Deccan. The manufacturers claim to have solved a problem that has defied the efforts of type founders since the beginning of the Nineteenth century. A fount of Nastaliq type 30 pt. weight 200 lbs. and is priced at Rs. 1-8 per lb. There are many other varieties of course. But the introduction of this type is in the nature of a revolution and should be widely known.

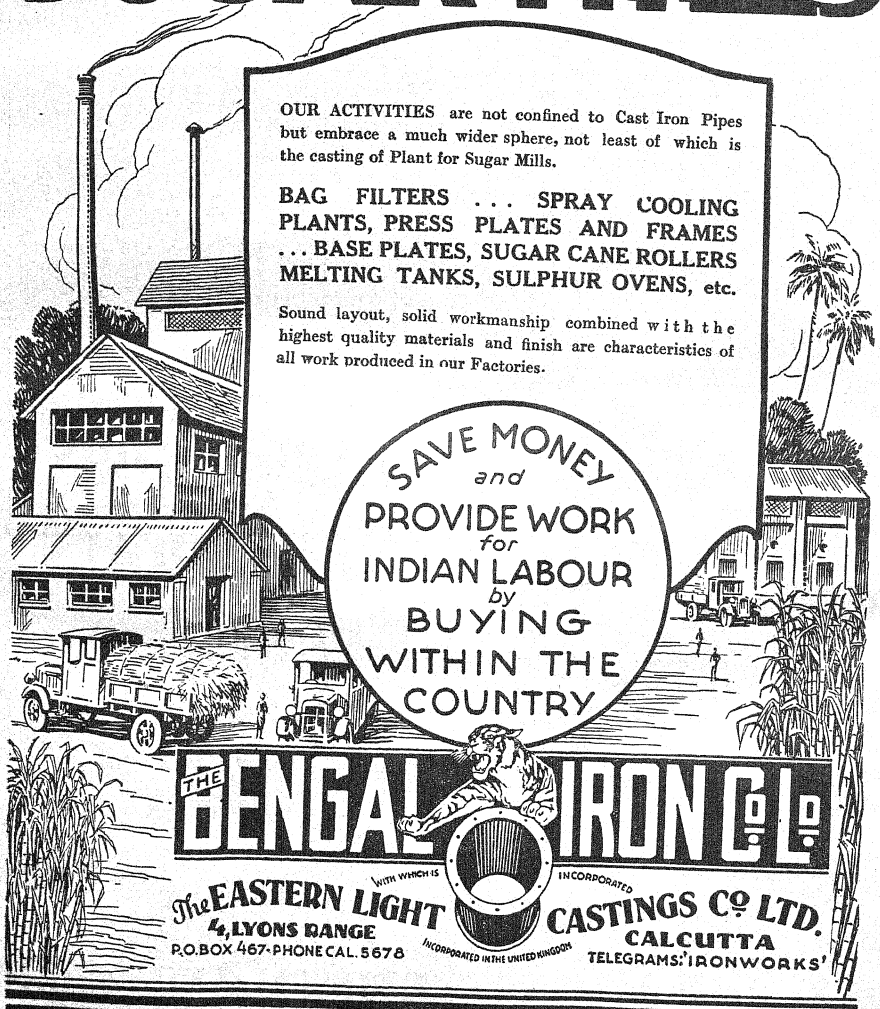
The Indian Woollen Mills Parekh Mansions, Sareu Road, Bombay showed useful travelling and other varieties of rugs. A typical speciment 60" × 100" at Rs. 25 and another at Rs. 16 are equal to any imported article at half the price. There were plenty of cheaper varieties also. The Company make suitings which are well worth an enquiry.

In leaving the subject of this interesting travelling exhibitions, we cannot resist a note of criticism. The railways appear to regard the affair as a mere question of haulage, and lack the vision to see how valuable it really is. Railways spend a great deal of money on publicity and they might well bruit the arrival of a train of this description when about to visit an important centre. A train travelling continuously for five months is an asset to be encouraged. Again originality should be protected. In the case of the train we are noticing the Railway authorities allowed another train to precede it on its own route which had been booked months before. In consequence the wind was taken out of their sails, if we may be allowed to mix our metaphors. The days of free trade are gone and protection is now the accepted maximum.



CASTINGS

OF EVERY DESCRIPTION for SUGAR MILLS



OUR ACTIVITIES are not confined to Cast Iron Pipes but embrace a much wider sphere, not least of which is the casting of Plant for Sugar Mills.

BAG FILTERS ... SPRAY COOLING PLANTS, PRESS PLATES AND FRAMES ... BASE PLATES, SUGAR CANE ROLLERS MELTING TANKS, SULPHUR OVENS, etc.

INCORPORATED IN THE UNITED KINGDOM

STEEL INDUSTRY---NEED FOR PROTECTION FOR FURTHER PERIOD

(Continued from previous Supplement).

145. The prices of Continental sections, bars and plates, in competition with which the Company has to sell its untested material, were, during the first three years, a little higher than the Board's estimates, but during the last three years they were very seriously lower than the estimates, while the prices of sheets, both black and galvanized, whether from the Continent or from the United Kingdom, have been lower than the estimates throughout the whole period, and were very much lower towards the end. The prices of other British material have in the aggregate been about equal to or slightly higher than the estimates, but the demand for the tested material which the Company sells in competition with British steel has been relatively so small that the maintenance or improvement of these prices has had very little effect in counter-balancing the falls in the prices of other steel.

146. The scheme of protection framed by the Board in 1926 did not make allowance for the costs of distribution of Indian steel (other than on railway freight) or for unavoidable differences between the net prices which could be realised by the Indian manufacturer and the nominal prices of imported steel. The scheme also assumed that the landing charges etc., connected with imported steel were higher than they are in practice. In respect of these factors and certain minor items, the Company's net realisations were in the aggregate seriously lower than the scheme assumed that they would be.

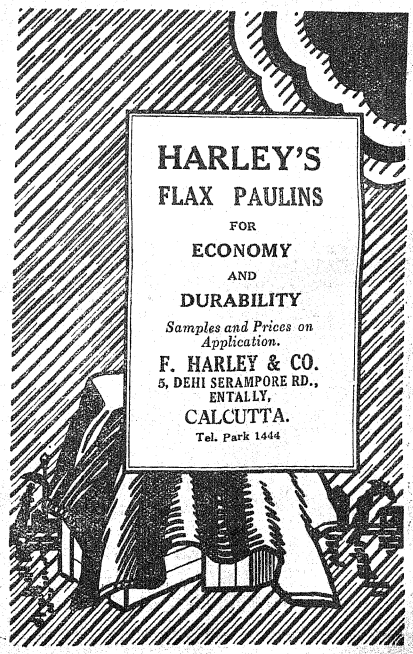
147. The only important factors outside the Company's own control which developed in a way favourable to the Company were the falls in the prices of coal, stores and spelter, but the fall in the price of spelter was one of the factors which led to the fall in the price of imported galvanized sheets; hence it did not actually benefit the Company. Government assisted the Company by increasing the duty on galvanized sheets from the beginning of 1931, although this was partly offset by further falls in the price of imported sheets, and by paying a higher price for the rails ordered for 1930-31 and 1931-32 only. This higher price, however, did very little to offset the effect of the fall in the quantities of rails ordered. In addition, the surcharge levied on all import duties since October 1931 assisted the Company to a moderate extent.

148. The total effect of the changes in the conditions in which the Company has had to work is that over the six years April 1927 to March 1933, the Company's surplus was less by about Rs. 4½ crores than it would have been if the Board's estimates of 1926 had been fulfilled. The Company gained about Rs. 2 crores by reduced prices of coal in comparison with the 1926 estimtes; on the other hand a somewhat larger sum was lost by the effects, direct and indirect, of the strikes of 1928; there was a deficit of nearly Rs. 2 crores in the Company's surplus due to the causes referred to in paragraph 139; the shortage of rail orders caused a loss of surplus of about Rs. 160 lakhs; the fall in prices of imported steel caused a loss of about Rs. 73 lakhs, after allowance has been made for the surcharge on the import duties; and the fall in the proportion of tested steel together with the change from freight advantages to disadvantages reduced the Company's surplus by Rs. 56 lakhs. The net profits of the Company during the last six years have therefore been only a small faction of what the Board aimed at providing.

149. The necessity for the continuance of protection is obvious from the satistics accompanying this representation. The Company suggests that the new scheme should be applied for seven years from April 1934. The Company will further develop its plant and it estimates that it will produce an average of 530,000 tons of saleable steel a year, as against an average of about 430,000 tons a year for the period 1927 to 1933 (excluding the strike year 1928-29.) On this rate of production, the Works costs should be as shown in paragraph 50. All these costs are lower than any hitherto attained.

150. In Chapter VI the Company discusses the valuation of the plant for the purpose of calculating the depreciation required and shows that it will be maintained fully up to the valuation: fixed by the Board in 1926. The various items of overhead charges are dealt with; and it is shown that the incidence of overheads and fair profit per ton of saleable steel to be produced will be slightly less than was assumed by the Board in 1926.

151. The prices of imported steel prevailing in the first six months of 1933 are set out in Chapter VII together with notes on the method of ascertainment of the prices and on landing charges. In the aggregate, these prices are seriously lower than those prevailing at the time of the Board's Enquiry in 1926.



152. The import prices need to be adjusted on account of the freight disadvantages to which the Company's steel is subjected as compared with imported steel landed at Indian ports. Further adjustments are required on account of discounts, commissions, rebates etc., and allowances must be made for such factors as the necessity of selling in complete wagon-loads rather than in small lots. The sales for 1932-33 are analysed in detail and the Company submits that suitable allowances should be made for all the above factors in framing the next scheme of protection.

153. The protective duties required are worked out both on a uniform basis and on a differential basis. If the latter is continued, the duties required on British steel will in all cases be less than those at present in force; for most kinds of steel duties at the rates of the existing revenue duties will be sufficient, but the duties required on bars and sheets from the United Kingdom are at somewhat higher rates than the ordinary revenue duties. On Continental steel substantial duties are still required, but they are lower than the existing duties for all kinds of steel except structural sections and bars, and the duties on these two materials also will be brought below the present levels if they are given the benefit of the surplus which the Company may expect to earn under the new scheme on rails, fishplates, British sections and plates. Proposals are made for certain changes in the Tariff Schedule to avoid evasion and also for powers to be exercised by Government if prices of foreign steel should fall further.

154. So far as the success of the industry is within the control of the manufacturer, the main factor is efficiency and economy in production. The extent to which the Company's efforts in this direction have been successful is shown in the statistics of costs. Marked improvements have been made in coal consumption, yield of good steel from ingots, increasing proportion of ingots produced by the cheaper method, increasing output per man and the closing down of old and relatively inefficient plant. These improvements have been due to close concentration by the staff and workmen on efficiency, to better organization and to the provision of new plant.

155. The Company has achieved substantial success in its endeavours to provide good technical training for practically all classes of its Indian employees. As a consequence, it has been able to Indianise its staff to such an extent that the number of covenanted employees (European) at the Works has fallen from 161 in June 1926 to 70 in April 1933. This policy will be actively continued as the experience of the Indian staff increases.

156. It is shown in paragraphs 136 to 141 that if the freights payable by the Company to the Bengal Nagpur Railway both on raw materials brought to the Works and on saleable products despatched from the Works were substantially raised, it would be necessary that the protective duties be correspondingly raised. This would involve an addition to the burden on the consumers of steel in India for which no responsibility would lie with the Company.

SUGAR PRODUCTION IN 1932-33

VAST INCREASE

Mr. Srivastava, Sugar Technologist, Cawnpore, writes :—

The impetus given to the sugar industry by the grant of protection in 1932 began to bear fruit during the season 1932-33, as the first batch of new factories commenced manufacturing operations during this season. Fifty-seven factories making sugar direct from cane worked during the season, as against thirty-two factories in the previous season, thirty-one out of the fifty-seven being old factories and twenty-six new ones. Figures relating to one new factory have not been taken into account, as this is a small experimental factory for training of students, with a nominal and uncertain output.

The following table shows the provincial distribution of factories working with cane during the last three seasons.

Provinces	Number of cane Factories Operating		
	1932-33	1931-32	1930-31
United Provinces	33	14	12
Bihar and Orissa	19	12	12
Punjab ...	1	1	1
Madras ...	2	2	2
Bombay ...	1	2	1
Burma ...	1	1	1
Total ...	57	32	29

The United Provinces, which include more than half the total cane acreage of India, registered the largest increase in the number of factories, Bihar and Orissa coming next. No new factories were built in any other province of India.

Duration of Season

Through the courtesy of the owners of sugar factories it has been possible to collect for the first time, information regarding the duration of the cane crushing season under review.

The cane crushing season started earlier by a fortnight in Bihar and Orissa than in the United Provinces ; 6 out of 12 old factories in the former province having started in the first week of November, whilst 10 out of 14 old factories in the latter province started in the third week of November.

The new factories were ready and began to operate earlier in Bihar and Orissa than in the United Provinces ; 6 out of 7 such factories having begun crushing by the third week in November, whilst several of those in the United Provinces were not ready till the middle of January.

A feature of special interest from the point of view of early starting of the season is that two factories in Bihar and Orissa began to work in the second-half of October.

Closing of Season

In respect of the closing of the season also, Bihar and Orissa had the advantage over the United Provinces of about a fortnight. All the old factories in the United Provinces had stopped by the third week

of May whilst as many as 5 out of 12 old factories in Bihar continued working till the beginning of June.

Increased Production

The production of sugar direct from cane in India totalled 290,177 tons during the season 1932-33 as against 158,581 tons during 1931-32. Out of the total production for 1932-33, the production of* sugar by new factories amounted to 102,492 tons, whilst that of old factories was 187,685 tons. The production of old factories thus shows an increase of 18.4 per cent. over the previous year. The total increase in the output of sugar during the season 1932-33 over that of the previous year amounts to 131,596 tons.

The quantities of cane crushed and sugar and and molasses manufactured during 1932-33 were considerably larger than those in 1931-32 in all the provinces.

The All-India increase in the quantity of cane crushed was over 87 per cent. and in that of sugar and molasses produced 83 per cent. and 88 per cent. respectively.

Average Recovery

It is gratifying to note that the average recovery of sugar in factories which worked for the first time during the season under review was as high as 8.55 per cent. In the United Provinces the recovery in the new factories was actually higher than in the old factories, the figures being 8.61 per cent. and 8.48 per cent. respectively.

*It may be pointed out that the present note does not deal with the total production of sugar in India, but only with the portton produced by modern vacuum panfactories directly from cane. In addition to this considerable quantities of sugar are manufactured from cane by small scale open pan factories and also refined from "gur" in vacuum pan refineries.

Of the 33 factories working in the United Provinces the extraction percentage for 10 was between 9.0 and 9.5 whilst it was between 9.0 and 9.2 per cent. for only 4 out of 19 factories in Bihar and Orissa.

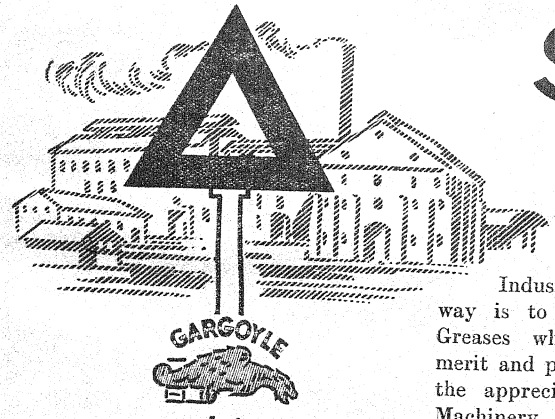
The highest recovery for the season was 11.1 per cent. as against 11.3 per cent. during the preceding season.

The average extraction percentage shows a slight decline in the United Provinces and Bihar and Orissa whilst for the rest of India there is a small increase. For India as a whole, the recovery has dropped from 8.89 in 1931-32 to 8.66 in 1932-33. The decline appears to be due partly to the larger quantity of cane crushed, necessitating a prolongation of the season.

The First Step

The season under review marks the first step in the programme of expansion of the sugar industry in India. When expansion is rapid, conditions are generally unstable and efficiency suffers, and this is what has taken place, to a certain extent in the present instance. But it is a matter for some satisfaction to those concerned with the technical aspects of the present development, that even in the first year of their operation the new plants have shown results which on an average are not inferior to those of factories established for several years. This augurs well for the future and in course of time, provided cane cultivation is properly organised, machinery is carefully looked after and only well qualified staff is employed, the efficiency as well as capacity of the new factories should show progressive improvement, and the industry as a whole should eventually find itself on a higher level of all-round efficiency than it has ever attained in the past.

The followng bookings list, issued by Messrs. Erdmann & Sielcken of Soerabaja, Java, is interesting



Safety first

In selecting Lubricants for Sugar Mills, as in any other Industry, the safe and economical way is to rely upon those Oils and Greases which, by their outstanding merit and proved performance, have won the appreciation and commendation of Machinery Manufacturers and Plant Executives alike.

LUBRICANTS

SOCONY-VACUUM CORPORATION

6 CHURCH LANE, CALCUTTA.

in so far as it affords final and conclusive testimony to the substantial diversion of the sugar trade from Bombay and Karachi to the Kathiawar ports. It will be seen that of the 7,450 tons shipped by s.s. Nizam, nearly half is for destination in the Native States territory of Kathiawar. Similarly, of the 5,459 tons shipped by s.s. Ranee nearly 50 per cent. represents sugar booked from Bedibunder and Bhavnagar. It is not surprising that Bombay should be so dreadfully agitated over the substantial loss of custom which is so markedly indicated in regard to the sugar trade. This loss pertains to many other commodities also. This raises very important questions concerning not only the welfare of Bombay as a port but the relation as regards customs between British India and Indian India.

SUGAR IN BENGAL

[*The following are extracts from the government pamphlet referred to in our leading article.*]

The total area under sugarcane in Bengal is reported as approximately 2,00,000 acres, and the normal yield of *gur* at 37 maunds per acre; but recent crop-cutting experiments indicate that the yield has increased to over 50 maunds per acre. This is due to the introduction of the improved varieties of cane by the Agricultural Department. Taking the lower figure of 37 maunds of *gur* per acre, the total production of cane *gur* becomes 7,400,000 maunds. In addition to this, date-palm juice yields *gur* estimated at about 2,866,500 maunds, making a total of 10,266,500 maunds.

As sugar constitutes an indispensable daily item of our food, it is unfortunate that India has become more and more dependent for its supply on foreign imports, and the country is spending a large amount of money annually to purchase this important commodity from outside. The outstanding reason, apart from other factors, for this annual outflow of many crores of rupees from the country, was the lack of an indigenous sugar industry on an extensive scale, able to compete with foreign sugar, owing to the poorness of the indigenous canes. These latter produced only about $\frac{5}{8}$ of a ton of white sugar to the acre, against $3\frac{1}{2}$ to 4 tons by Java. The magnificent work of the late Dr. Barber at Coimbatore has largely made up this difference, and the rapid spread of these Coimbatore varieties has made possible the revival of sugar-manufacture in India. In addition, the recent decision of the Government of India to impose a tax at Rs. 7-4 per cwt. on all imported sugars, and the desire of the people to use local produce even at a sacrifice, are bound to give an impetus to the establishment of sugar factories all over India.

There are about 12 sugar factories in the United Provinces, 11 in Bihar and Orissa, 6 in Madras, and 2 in Bombay; but there is not a single factory in Bengal.* The possibilities of starting sugar factories in this province have been fully discussed by the Tariff Board in their report to the Government of India on the sugar industry, and the Annual Reports of the Bengal Agricultural Department show that there are several places where the surplus of cane remaining after fully meeting the demand for *gur*,

*Four, however, are reported to be in process of erection.

can feed a number of factories in Bengal. Moveover, the ryots of Bengal have been faced with a serious crisis, owing to a considerable fall in the price of their agricultural produce, and Government are advising them to restrict the area under jute and utilise the land for sugarcane cultivation wherever possible. So the establishment of a factory industry for the manufacture of sugar direct from cane will lead the ryots to produce sugarcane as a good and profitable substitute for jute.

The Bengal Agricultural Department has introduced a very good prolific variety of cane, i.e., Co. 213, which is not only rich in purity of juice but also produces a heavy outturn. This variety, having wild sugarcane as one of its parents grows well in most tracts and can be ratooned for 1 or 2 years successfully. It is spreading very rapidly all over the sugarcane growing areas of Bengal, and the manufacture of sugar on a large scale, direct from canes of this variety, has now become possible in several places.

Turning to the possibilities of white sugar manufacture in this province, some comparison with other cane-growing parts of India might be made. First, it may be safely stated that the climatic conditions in Bengal are generally more favourable than up-country. This means a longer and heavier rainfall, with a corresponding longer period of growth. The grey silt areas, too, usually consist of fairly rich soil, so that these two factors should and do produce a heavier-yielding crop than in most other provinces, provided ordinary care is taken with cultivation. Irrigation, too, usually a fairly expensive business, is generally not required over the major part of the province, as the rainfall, both in incidence and amount, is sufficient for the needs of the crop. It should be noted here that this Co. 213 sugarcane is capable of standing water-logging; in fact it has been known to have grown in a foot of water, for one or two months during the monsoon, without any serious deterioration.

WORLD OF INDIAN FINANCE

Calcutta, Dec. 1.

There has been no appreciable change in the money conditions during the week. As in previous weeks, there was no demand from any quarters; and the paucity of demand has continued to manifest itself in ease of monetary conditions. The general sentiment in the market is still one of wistful hope that there would be something of a revival in this export season. In this respect the October trade returns are somewhat heartening. In September we had to comfort in the fact that though the figures for that month showed a fall as compared with August, the figures of the first six month's of the current fiscal year showed a substantial improvement over those of the corresponding period of the previous year. But hopes engendered by this fact would yield place to gloom, if October had repeated the poor performance of September. It is definitely encouraging that the table of comparative figures furnished in the official summary of India's foreign trade in October shows a paucity of the disheartening minus sign. Except in re-exports in October as compared with September and imports in seven month's ending. October 31 as compared with the corresponding period of 1932, there is a good margin of increase to show in the current year. We may dismiss the comparison with October 1932 as that belongs to a period in which we were unquestionably in the trough of the depression. But as compared with September last October shows an increase of 187 and 131 lakhs under imports and exports which amounted to 10,62 lakhs and 12,61 lakhs in the month under reference. Re-exports at 30 lakhs show a fall of one lakh. Taking the seven month's together imports fell by 14,79 lakhs but exports shot up by 11,42 lakhs or 15.8 per cent. Re-exports have increased by 9.8 per cent. The balance of trade in treasure shows a fall both in October as compared with the previous month and in the seven month's. It is something to rest our hopes on that in spite of a fall in gold exports of 374 lakhs in the seven months the visible balance of trade has increased from 27.22 crores to 50.75 crores.

The details of fluctuations in the import and export trades are not of much interest to a money market review. Suffice it that the review of trade in October is calculated to sustain the hopes of revival. But it is too much to expect that traders would so readily base their programmes on nice differences of exports, imports and balances of trade. For the present the revivalist sentiment is not strong enough to induce any marked demand for money and conditions in the market continue to be as easy as before.

The results of the Treasury Bills Tenders during the week suggest that the Government would before long benefit from the ease of monetary conditions. The amount offered on the last auction nearly touched the 5 crore limit. The yields have gone up so high that the lowest rate accepted on Tuesday last was Rs. 99-6 which works out to a yield of over 2½ per cent. The tap-rate has had a corresponding increase; and though sales of Intermediates were very low at Rs. 18 lakhs last week, the increase in the tenders clearly suggests that the bait of increased yields has at last begun to catch and that funds which had been kept idle so long will now come for investment in Treasuries.

The question of calling a halt to the weekly increase in the yield which we had considered repeatedly in these columns now comes to have an enhanced significance. It is quite understandable that with ways and means advances piling up and with maturities of 13½ crores staring them in the face the Government should start wooing the market from a long time ahead. But is it wise to continue the policy when its effects seem to be so apparent? For our part we would like to see Government making an attempt to rope in all the funds available at the present rate. But it seems probable at the same time that yet another increase in yield is in store for the market, if only because the ways of the Government are none too easy to foresee or direct. Much would depend on the sales of Intermediates subsequent to the last auction; but it should not be forgotten that such sales are themselves dependent on whether or not Government are prepared to the present rates as the highest they would offer.

While the ways and means position of the Government has improved, the giltedge market has registered further weakness over last week's closing rates. Paper has lost another 10 annas in com-

parison with last Friday. It is reported that there has been some demand for 3½% 1947-50, while there is a tendency for the sale of short dated scrip. Investment houses are still fighting shy of giltedge, though there seems to be a slow return of confidence in the longer dated scrips. 4% 1960-70 is in fair demand. December is not generally a good month for giltedge ; and, should there be any the slightest revival in trade, th existing quietness in the securities market will be further accentuated. One should, therefore, congratulate one's self, if there is no further deterioration in rupee securities. London now-a-days acts as a spur for racing down the slope not as a force to pull up.

While the securities market has lost ground, the exchange market has gained some strength. 1sh. 5 15/16d. is the prevailing rate at close of business to-day. The nightmare of reverse sales is now gone and with the huge stocks of gold at Bombay—it is estimated at between 900,000 tolas to 1 million tolas —the prospects of a further rise in the rate seem assured. It would have created an interesting situation at this juncture, if the yellow metal had become suddenly scarce and Government had been compelled to resort to measures to support the rupee ratio.

The closing rates are : 1s. 5 15/16d. December-January T.T. with 1s. 5 31/32d. available for Ready; 1s. 5 29/32d. February-April T.T.; 1s. 5 7/8d. March T.T. and onwards.

Three months sight bills may be quoted : 1s. 6 1/16d. with no life at that rate; 1s. 6 1/32d. February-March onwards.

Money was exceedingly easy with call money quoted ½ per cent. Onemonth twomonth and threemonth deposits may be quoted 1, 1¼ and 1¾ per cent. respectively.

(By Wire)

Madras, December 1.

The market is considerably steadier than when we wrote our report a week ago. No doubt a contributing factor to this feeling is the statement regarding the Rupee ratio made in the house of commons by Sir Samuel Hoare a few days ago. It is also reported here that there has been some resumption of gold exports from Bombay and if this be the case there seems every reason to expect the rupee to remain steady round about its present level. Banks here are sellers at 1s. 5 15/16d. to January, 1s. 5 29/32d. February-March and 1s. 5 7/8d. April to July. Three months sight bills are quoted 1s. 6 3/32d. to January and 1s. 6 1/16d. there after.

There is a slightly better demand for call money which is still quoted at one per cent.

MUNICIPAL GAZETTE ANNUAL

Eaves-dropper writes :—

Mr. Amal Home is, I repeat, no Editor of the humdrum type ; and it follows that the Anniversary Numbers of the *Calcutta Municipal Gazette* are not the humdrum affairs which most annual publications tend to become. It has come to be acknowledged, on all hands, that Amal's judgment and taste, jouralistic *flair* and æsthetic sensibility combine to make the Anniversay Number a star performance in Indian journalism. Each little detail has engaged his thought ; and there is planning of a concerted kind whether we review the publication as a whole or in its component parts. The frontispiece is striking, piquant and apt. A bust of Marcus Aurelius decorates the front page illumined by a pithy passage from his Meditations : "As thou art thyself a component member of a civic system so let every action of thine tend to the completeness of civic life." Mr. S. K. Basu, the Mayor of Calcutta, has conveyed his greetings on the fine record of the *Gazette* and testifies that "a living stream of the world's best civic thought has come down through its pages, and has cast its vitalising influence on our Municipal endeavours in this City". Mr. M. A. Razzak, the Deputy Mayor, reiterates the necessity of a vernacular supplement of the *Gazette* which, he considers, is a desideratum. There is a galaxy of brilliant contributors and it is my regret that, despite Amal's invitation, I could not have figured among them and achieved distinction even as the string gets its fragrance from the garland of Flowers. It is not surprising that the poet in Rabindranath Tagore has been offended by the chaotic expressions of culture in our city and our exterior life. "They have been imitation of Europe and their lives have flowed in channels which have been sometimes at tangent and sometimes parallel to our own. Now that India is slowly coming to her own, our towns should mirror our national culture and artistic sensibilities. I look forward to a Calcutta which will reflect this idea."

Equally inspiring is the beautiful contribution of Dr. W. S. Urquhart who writes on the City of God.

"These things shall vanish all
The City of God remaineth".

As it is, one knows that ours is the earthly city and that we all would like to escape to the Heavenly city. But why should the two cities be two and not one. From the narrowest lanes of our crowded cities a glimpse of the sky can be seen. In the darkness of the night the stars appear. So a vision of the Heavenly city ought to be possible for all those who go about their daily business in the streets of the earthly one.

> "The principles which govern such an Heavenly-earthly city ought to be not particular but universal. No city can continue in which the concern of all is not the concern of each, and the all must be inclusive not exclusive. And no city can continue which works merely for immediate ends, in which and for which the past and the future are not as real as the present."

Pandit Jawaharlal Nehru writes on Civics and Politics and declares that communism is but the municipalisation of the country of the world. Communism means the expansion and the application of the civic ideal to the higher group of the nation and ultimately to the world. And so the civic ideal becomes the national and the international ideal. It is a brief but thoughtful contribution. If Pandit Nehru is a socialist, who amongst the thinkers of the world can be in any other category than that of socialist?

FINANCE ABROAD

	Sterling dollar rate	Sterling franc rate	London price of gold
November 24 ...	5.20	83.65	126s. 1d.
November 25 ...	5.20¼	83.84	126s. 6d.
November 27 ...	5.11	84.50	125s. 3¼d.
November 28 ...	5.17½	83.87	125s. 6d.
November 29 ...	5.19⅜	84.31	125s. 6d.

There has been an apparent halt in the rapid depreciation of the dollar which began with the announcement of President Roosevelt's gold purchase policy. It may even be said that the dollar has had a slight recovery, as the cross-rate has declined from 5.20 to 5.11 on November 27, with a subsequent increase to 5.19⅜. But no such check is noticeable in the fall in the franc. Sterling has continued to appreciate till on November 29 it stood at 84.31 as against 83.65.84.50 was touched in the middle of the week. And it is interesting that certain sections in Paris actually believe in the possibility of a 100 franc pound. One of the important Paris houses is said to be buying sterling ; so great is its confidence in the appreciation of the British currency. But the generality of French opinion, as opinion elsewhere, must scout the idea of any such rapid increase in the value of sterling in terms of the franc.

Reports are current already that the British Exchange Equalisation Fund has endeavoured with marked success to keep sterling well within the limit of 84⅛ francs. It is highly uncertain whether the control will continue to interest itself in the franc, if the relevant factors should be increasingly adverse to Britain in the near future. There has been as yet no indication of the official policy in regard to the exchanges. Last week, attention was drawn in these columns to the demand of British publicists that the Government should no longer be indifferent to the increase in the external value of sterling and that their regard for the interest of the British export industries should induce them to take action calculated to eliminate the danger of increase in the value of sterling through the depreciation of foreign currencies. The weight and volume of such opinion induced the hope that before long the authorities in Great Britain would feel obliged to make a definite statement of policy. So far what has happened is that Mr. Neville Chamberlain, the Chancellor of the Exchequer, has been obliged to signify his awareness of the agitation that is now afoot. In reply to questions in Parliament, the Chancellor said that according to such information as reached him the depreciation of the American dollar had not up to the present seriously affected British trade. He was, he maintained, carefully watching the situation in all its aspects and consideration would be given to the question whether action would be necessary in the interests of Great Britain. In reply to another question, Mr. Chamberlain said that he had every reason to hope that the policy of maintaining the independence of sterling has been approved by British manufacturers.

As against the statement of the Chancellor of the Exchequer that the depreciation of the American dollar had not up to the present seriously affected British trade, we have on the authority of the City Editor of the London *Times* that American export trade has had a considerable expansion under the stimulus of a depreciated dollar. It would still remain to consider what part the expanded export trade of America is represented by goods that are sold in competition with British goods. For only in that case would it be possible to urge that the depreciation of the dollar has affected British export trades adversely. But it is certain, however, that the American monetary policy, even if it has not already inflicted any harm on British trade, is bound to do so, and in a marked measure, in the future.

What the next step in President Roosevelt's policy may be, it is nearly impossible to guess. There is, in the first place, the understanding between the three principal central banks which is still shrouded in a thick veil of mystery. Our "overseas" columns this week refer to its existence as a certainty and attribute the comparative equanimity of the French and the British Governments over the depreciation in the dollar to the existence of such an agreement. It is even suggested that there has been a degree of co-operation between the central banks in respect of the working of the gold purchase policy and all these can happen only when Britain and France have been reassured, through an agreement, that the policy would not involve any serious harm to the safety of their currencies and currency policies. This surmise fits in with a report in the *Statesman* that "rumours are current in Wall Street that the present sound money campaign is likely to upset the inflationary sentiment in Congress so as to permit President Roosevelt to adopt a middle course which, while involving devaluation of the dollar, will prevent any excessive undervaluation of it." But it may be questioned whether the correspondent of the *Statesman* has not allowed his wish to propogate the thought. We all know how much the average European would like the sound money campaigners in America to prevail over their President. But at the same time there is little room for doubt that the Congress is pronouncedly inflationary in sentiment and that so far the supporters of sound money have done little to ensure the sympathy or support of President Roosevelt. .The business and the financial interests have, on more than one occasion, actively endeavoured to foil the plans of the President, till the stage has arrived when Mr. Roosevelt would be perfectly justified in believing that he has nothing to gain by placating the "sound money" men.

We pointed out last week that the action of Mr. Sprague in suddenly springing his resignation on the American Administration may well have had the effect of turning President Roosevelt wholesale to the side of inflation. It is too much to believe that, just when President Roosevelt decided on the need for a more thorough inflationary policy than had been possible for him to pursue in the past, he would have agreed to tie his hands in material respects with an understanding with the Bank of France and the Bank of England. For our part, we are certain that, whatever the terms of the agreement with the central banks, President Roosevelt would have reserved for himself the freedom to implement the charge that Congress laid on him of bringing the value of the dollar to near about 50 cents. gold.

British correspondents have probably set too much store by the recovery of the dollar during the week now ended. Apart from the fact that every forward movement towards depreciation must have its periodical halts and setbacks, there is, at the present stage, a sufficient explanation available for the behaviour of the dollar in that the Government have to put through at the end of the year financial transactions on a big scale. It is interesting to reflect that the difficulties, with which President Roosevelt is confronted in his Recovery Programme, are not unlike the measures of financial sabbotage which a Socialist Government might have to encounter during the first few months of its office. While, probably, as a review of a book on this subject in this issue will show, a future Socialist Government, say in Britain, might be well prepared with a technique and programme of action for combating the sabbotageurs, President Roosevelt is learning by the somewhat slow process of trial and experiment. There is reference in our Overseas columns this week to the measures which President Roosevelt adopted in Air Mail week to ensure that no material part of his financial programme is upset by the defections of City financiers. It may be seen from this that the purely technical difficulties of putting through financial measures during a period of currency inflation would not stay the hands of President Roosevelt if he is otherwise determined to take the dollar down to still lower depths.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Easier conditions have prevailed in the Exchange as compared with the previous week. The volume of business has been very small and values in almost all sections was unchanged to easy. In Government Paper there was not much of change but values were tending to decline. Coals maintained their position but were not in brisk demand. Quotations in many cases showed that buyers were not keen for paying higher prices. Teas in spite of restriction and better sale returns showed no improvement whatsoever, on the contrary certain scrips were more for sale rather than in demand. Sugar shares were dull and featureless, the rise which took place previously proved to be short lived. Bank shares had not much interest shown. The values remaining unchanged. Jutes were quite neglected, only Kamarhattys being firm to steady in anticipation of a fairly good dividend. One important stock broker is reported to be interesting himself in the purchase of Indore-Malwa Cotton Mill Agency, and is reported to have left Calcutta for negotiating the business. If it results a new scrip in Cottons will be added to the exchange for operations. Indore-Malwas are quoted at Rs. 75 in Bombay.

MADRAS STOCK EXCHANGE

(*By Wire.*)

(From Our Correspondent)

Madras, November 30.

The higher rates paid for Treasury Bills and the increase in the quantity offered on the auction day have contributed towards the weakness in the securities market. There were sellers for short-dated securities which were daily marked down. 4½ per cent. 1934 changed hands at 101, 4 per cent. 1934-37 at 100-6-6 and Treasury Bonds at 105-12. Bombay Development Loan was offered down to 106-8 with buyers uninterested both locally and in Bombay. Medium dated loans were also lower. 1938-40 changed hands at 107-3 closing at 106-14, 1940-43 at 105-2, and 1939-44 at 105-3 with sellers now at 105. In the long-dated securities, excepting 1947-50 which kept steady on account of short-age of scrip coupled with some investment support, others were quiet. 3½ per cent. Paper touched 81-6, improving slightly at the close, whilst 5 per cent. 1945-55 was down 3 annas at 113-12. Amongst State loans, Mysore 4 per cent. 1953-63 was taken up at 4 annas premium with buyers over, whilst 5½ per cent. Mysore 1938 changed hands at 109-4. Cochin Loan was wanted at a small premium with no business resulting owing to absence of sellers. Madras Corporation debentures were offered on a 4½ per cent. yield basis with buyers uninterested at the moment.

In joint stock company debentures, Rajahmundry Electrics were asked up to 105 and Vellores at 102 per cent. United Nilgiri 7 per cents. were absorbed at 101 with further buyers at this. Amongst preferences, Tata Second preferences were a dull counter at 101 and Spencer B were transacted at 10-4 with more shares wanted at this price.

Banks were steady with no business in Imperial & Central. Bank of Indias were a steady feature at 103. Indian Banks Big was quoted at 93 whilst the Small shares put on 4 annas at 19-4. State Aided Bank of Travancore was done on several occasions at 16 and looked like moving down.

Mills were quiet excepting Maduras which were done at 31-8. There were buyers over at the close at this price.

In Electrics, Trichy Srirangams were done at 142, with more shares on offer, whilst East Tanjores had sellers at Re. 1 premium. Vellores were steady at 9-12 and Benares at 11-8 with none offering.

Cement shares were a more active market, Indians, Kathis and Shahabads attracting attention The last mentioned touched 250, but they all closed better. Coimbatore Cements were wanted at a small premium.

Sugars were a turn easier. Deccans after being done at 262-8 closed with sellers at his price. Distilleries were unchanged but India Sugars had sellers at 4 annas discount.

The *Planting* section attracted more attention. Peria Karamalais were a strong feature with small business done at 32 but closed at 33 buyers. United Nilgris jumped over 10 points without business resulting.

The Miscellaneous section was dull with deals in Murree Breweries reported at 179 and 178 both cum dividend.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From our Correspondent.)

November 30.

Securities.—Giltedge securities ruled very quiet during the period under review. Government paper for 3½% fluctuated within narrow range and on balance eased by eight annas. Rate closed last Thursday at 81-15-0, touched highest and lowest at 82-2-0 and 81-5-6 respectively and closed to-day at 81-7-0. There were no features worthy of note.

Shares on Friday and Monday only moderate. Turn over was witnessed on Saturday, Tuesday and during opening stage of Wednesday prices sagged alround due to heavy unloading but market steadied to some extent, thereafter, on rumours of stabilising of dollar-sterling exchange. Following table will give better idea of fluctuations:—

Bombay Dyeing close on 23rd 760, Highest 760, Lowest 750, closed to-day 753-12-0; Century 199-6, 201-14, 188-12, 192-8; Kohinoor 123-12, 124-6, 117-8, 117-8; Nagpur 231-4, Lowest 216-14, close to-day 223-12; Andhra Valley ordinary 1,326-4, 1,336-4, 1,302-8, 1,321-4; Tata Power ordinary 917-8, 921-4, 895, 903-12; Tata Hydro ordinary 143-12 lowest 135 closed to-day 139-6; Bombay Tramways 134-1, 131-9, 133-7; Bombay Burma Old 345, 350, 237-8, 347-8; Indian Cement 258-12, lowest 242-8, close to-day 253-2; Tata Steel ordinary 47-8, close to-day 45-12; Tata Steel Defd. 180-10, 183-2, 175, 177-8; Indian Bleaching 125, 147-8, close to-day 132-8; New India Assurance 24-14, close to-day 24/-.

JUTE AND JUTE GOODS

JUTE

During the current week the jute market has ruled steady but quiet with prices tending downwards. Business in firsts was done at Rs. 24-4 for 15th December, with sellers over towards the close. There are sellers for loose jute Jat LR and XLR at Rs. 4-2 and Rs. 3-10 per mand, mills on the contrary taking little interest.

December future was rather easier during the earlier part of the week, but was fairly steady on Tuesday and wednesday on bear covering. The highest price of the week, was Rs. 25-4 and the lowest Rs. 24-10 per ball.

The imports of jute in Calcutta for the season up to 25th November 1933, have amounted to 48 lakhs of bales out of which 30 lakhs of bales have been taken up by the mills in Calcutta and 17.8 lakhs exported outside India. The arrivals by this date last year were little over 41 lakhs bales only out of which mills took 25 lakhs of bales in Calcutta and only 11 lakhs bales were sent abroad.

The tendency of the market is easy with a steady undertone at declines only. Little support is lent to the market at rise.

JUTE MANUFACTURES

Comparatively steadier conditions have prevailed in the hessians market during the week under review. The lowest and highest for nine porter February hessians were Rs. 8-11 and Rs. 8-14 respectively. The strength was due to bear covering and better export reports. The exports of hessians during the current month is reported to be near 9 crore yards, a figure which exceeds market expectations. Due to better exports the stocks have remained at a figure slightly lower than the previous month and has therefore been a bull factor.

Heavy goods market however was not so steady except in sympathy with hessians. The stocks also are comparatively heavy and there is little chance at the moment for their being reduced to a figure which will be considered bullish and healthy for the trade.

It is reliably informed that negotiations for continuing the short-time agreement when it lapses are proceeding. Certain group of mills is reported to favour opening of 5 per cent. hessian looms out of 15% sealed. Against that closing down of 5 per cent. heavy goods looms is recommended. There is every justification for reducing the heavy goods looms, but opening of hessian looms will certainly have a bearish effect on the market. The stocks of hessians have been brought to a healthy point and just to increase them at this juncture is not very much desirable.

The tendency of the market has been firm to steady. A big speculator is reported to have sold hessians in very large quantities but at the moment it has been well absorbed.

COTTON AND COTTON GOODS

COTTON.

By Wire

(From Our Correspondent)

November 30.

American Cotton rates have moved within narrow limits. Operators kept quiet awaiting clarification of Government monetary policy. Gold price continues to advance which signifies that the President will stick to his Gold purchasing policy for raising commodity prices. On the other hand rumours are current about stabilising Dollar-Sterling rate. Locally the Broach rate touched lowest at 174/-. Oomra and Bengal rates have suffered more. Movement of crop has frightened bulls. No settlement has been yet arrived with Japanese. Hopes about lowering rupee hundi to 16d. have been destroyed.

Very dull conditions have prevailed in the cotton market during the current week, and values are considerably lower. Broach April/May stands at Rs. 177 after toucoing Rs. 174.

The weakness in Indian cotton was primarily due to the depreciating dollar which places American cotton in a very favourable position for buyers abroad. Despite the depreciation of dollar the trend of the cotton market in New York has been downwards the position there being over bought and thus technically bearish. New York March 1934 quotations losing 13 points on balance in the course of the week after a loss of 20 points.

The continued boycott of Indian cotton by Japan is another factor which is very adversely affecting the market. The negotiations which are being carried in the capital have been going on for a very long time without any result so far. The statement issued by the Japan cotton merchants and kindred unions in Osaka and reported by the Reuter's Agency the other day had a very nervous feeling on the market and under pressure of bull liquidation values immediately declined to Rs. 174.

What Japanese boycott has meant to Indian cotton will be abundantly clear from the following figures.

	Bales Season 1933	Season 1932
Exports of Indian Cotton to Japan	321	138,446
Exports of American Cotton to Japan	712,000	480,000

The result of fall in exports of cotton to Japan has led to a total shrinkage in exports to 194 thousand bales this season as against 345 thousand bales by this time last year. This falling off is in spite of the fact that Great Britain continent and China have all increased their purchases this year.

	Bales Season 1933	Season 1932
Exports to		
Great Britain ...	9,473	4,956
Continent	79,674	66,855
China	42,000	200

The weakness of the market is aggravated by the continued economic distress of the grower of cotton. The new crop this season is delayed and the full pressure of hedges is still to be borne by the market. The total arrivals of cotton in Bombay for the period ending Nov. 23 are 125 thousand bales as against 213 thousand bales during the same period last season. The total pressing up to Nov. 10 showing 142 thousand bales as against 193 thousand bales in 1932-33.

The deliveries against Dec./Jan. contracts in Oomras and Bengal will start this week. In the ordinary course with present low stocks a stiffening of rates would have been witnessed but there being no demand for spot lots a weaker market is to prevail as the delivery period progresses. One of the big speculators in Bombay is reported to be a heavy bear even at these prices as his idea is for lower price still. Judging the facts as they are at present there is little optimism in the Indian cotton in near future.

PIECEGOODS

Pending the Japanese settlement, the undecided position about the Lancashire goods, and fluctuating exchanges the conditions in the piecegoods were very dull and practically there was no new business in the market. Enquiries have been very numerous. Stocks are very much low in several styles when compared with past six months, and have led to these genuine enquiries which are in no way the feeler of the market. But the fluctuating exchange and depressed condition of the cotton market have placed the buyers limits at levels which are low enough for the sellers in U. K. So far as Japanese goods are concerned there is a consistent drop in imports for the last four months but there has been no fresh business in forward positions.

From the market point of view the stocks are gradually diminishing but the prices of agricultural products are so low that offtake is showing very poor results and stockists are not encouraged to increase their holdings.

The business during the week has resulted in Indian standard lines and in Lancashire white yarn Dhooties and dyed voiles and fancy goods for December/February positions.

YARNS

Comparatively steadier conditions have prevailed in the yarn market and values on balance are firmer. But with the decline in the value of cotton it seems doubtful if the same will be long maintained.

BULLION

GOLD

(*By Wire*)

(From our correspondent)

Bombay, 30th Nov.

Gold.—It is difficult for the new French cabinet to steer Budget Bill and on the Bourse it is talked about that the franc will be quoted at 100 per Sterling. On the other hand if America makes larger purchases of Gold from France, the latter may have to give up Gold Standard apart from Budget question. Hence trend for Gold cannot be determined. Locally Gold rate declined to Rs. 31-0-6 on Monday, again improved to 31-7-0 yesterday, and is standing to-day at 5-30 p.m. at 31-5-0.

Calcutta, 30th Nov.

Still easier conditions prevailed in the gold market and local values dropped to Rs. 31-4 per tola. London quotations have in sympathy with the Sterling-Franc Cross rate have gone down to Sh. 125-6. At the decline there has been heavy buying by Banks and it is also reported that buying on account of French Banks is going on.

Another important feature of the week was large holding of gold by merchants in Bombay and selling franc against gold in anticipation of France's going off the gold standard very soon. This mentality is visible in Paris also where it is expected that London Paris cross rate may rise to 100. One important house is reported to be selling franc and buying stetrling. The other day Lloyds were reported to be quoting in London the rate of 40 to 50 per hundred for France going off the gold by 31st December, 1933. This shows that there has been a strong hope of France's abandoning gold. The official circles however completely deny the same.

Stocks in Bombay are unusually heavy exceeding 10 lakhs tolas. Imports of gold from the interior have once again improved and consequently larger exports out of India are soon expected.

LONDON (Air-Mail Week)

Gold reserve against notes of the Bank of England was £190,538,384 on the 8th instant comparing with £190,447,031, the figure for the previous Wednesday.

Substantial supply of gold was available in the open market. Continent purchased most though destinations are not disclosed. Demand though keen was not such as to maintain the premium over thett franc parity.

Regarding American gold purchase abroad, it has been authoritatively stated that some purchases have been made both in Paris and London.

The following were the United Kingdom imports and exports of gold registered from midday on the 6th instant to midday on the 13th instant:—

SILVER

(*By Wire*)

(From Our Correspondent)

Bombay, 30th Nov.

Silver.—December rate which was quoted last Thursday at Rs. 56-9-6 was hovering between 56-8-0 and 56-11-0: but suddenly gave way on Tuesday to 56-2-0 due to liquidation by disgusted bulls and stands to-day at 56-5-0 at 5-30 p.m.

Calcutta, 30th Nov.

Easier conditions have prevailed in the silver market and values have shown a decline of about 4 annas per 100 tolas, the latest quotations are Rs. 56-10 per 100 tolas. The market has been supportless and feeling the weight of heavy stocks in Bombay. The bulls have to pay a premium of 2-3 annas at each delivery time and are therefore losers in the long run. The conditions in the market have remained so desultory and stagnant that there is little chance for the bulls to liquidate at profit. This has considerably reduced the number of small holders and the market is consequently deprived of these buyers.

The nefs that after transferring Rs. 50 crores worth of coin to the Reserve Bank, Government means to dispose off the remaining coins and bullion had a heavy feeling on the market and the bazar is feeling very shy.

In the foreign markets too there has been little support for the white metal, price are therefore tending towards decline.

Stocks and offtake remain almost unchanged.

25 YEARS TEST

REVEALS THE BEST

Service: For over 25 years "The Indian Mercantile" has served the Indian Public with complete satisfaction.

"Dependable" is no exaggerated description of this indigenous concern which has at the time Assets exceeding three times its paid-up capital and has paid, with rare exceptions, handsome Dividends since its inception.

Life policies issued by this Company are scientific, up-to-date and designed to meet individual requirements at competitive rates of premium.

Agency Terms are unique and treatment sympathetic.

LONDON (Air Mail Week)

During the week the market remained fairly steady and prices were very much at last week's level. A slightly easier tendency marked the earlier half of the week due to hesitancy of buyers. But the renewal of American support made recovery easy. China showed disposition to re-sell while Continental offerings continued. America also sold occasionally though she was a substantial buyer on the whole. The Indian bazaars bought without exerting pressure.

The outlook is uncertain depending as it does on the course of the dollar exchange and the price movements in the United States.

The following were the United Kingdom imports and exports of silver registered from midday on the 6th instant on midday on the 13th instant:—

SUGAR

There has been no change in the market during the current week the tone remaining rather easy all along. The demand is poor and the expected arrivals of Indian sugar in the course of next month is counteracting against the poor stock on hand. Statistically the position of Java sugar is becoming more and more healthy the new crop sowings are reported to have been reduced further. It is anticipated that the present stocks will be cleared by 1936. At the moment the trend of the local market is far from bullish.

INDIAN TEA SALES

At the London auctions on Nov. 27th 26,500 packages of Indian tea were submitted for sale. There was a fairly good demand. Prices were irregular. Common and low medium sorts and thin liquoring teas although easier, closed with some improvement. Better qualities were irregular.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 10¾d., to-day's auction 11d. lb; Common Broken Pekoe last auction 10¾d., to-day's auction 10½d. lb.; Common Orange Pekoe last auction 11¼d., to-day's auction 11d. lb.; Common Broken Orange Pekoe last auction 11d., to-day's auction 11¼d. lb.; Common Broken Pekoe Souchong last auction 11d., to-day's auction 11d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 11¼d., to-day's auction 11d. lb.; Clean Common Broken Pekoe last auction 11¼d., to-day's auction 11¼d. lb.; Clean Common Orange Pekoe last auction 11¾d., to-day's auction 11½d. lb.; Clean Common Broken Orange Pekoe last auction 11⅝d., to-day's auction 11⅝d. lb.; Clean Common Broken Pekoe Souching last auction 11d., to-day's auction 11d. lb.

CEYLON TEA SALES

At the London auctions on Nov. 28th 18,200 packages of Ceylon tea were submitted for sale.

Although there was a fairly good demand, prices were generally easier.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 11½d., to-day's auction 11¼d. lb.; Common Broken Pekoe last auction 11½d., to-day's auction 11⅛d. lb.; Common Orange Pekoe last auction 13⅛d., to-day's auction 12⅛d. lb.; Common Broken Orange Pekoe last auction 12⅝d., to-day's auction 12¼d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 11⅝d., to-day's auction 11⅝d. lb.; Clean Common Broken Pekoe last auction 12½d., to-day's auction 12d. lb.; Clean Common Orange Pekoe last auction 13⅜d., to-day's auction 12½d. lb.; Clean Common Broken Orange Pekoe last auction 12⅝d., to-day's auction 12⅜d. lb.

GRAINS AND SEEDS

WHEAT

Since reporting last week the wheat market has ruled quiet without much business passing. There has not been much change in values May Beta remaining throughout the week near Rs. 2-15-6.

The weakness as reported last week was due to heavy selling from stock holders in Northern India. The sales were partly on profit taking account and partly as hedges against the actuals. Despatches to port towns and trading centres have been comparatively larger.

The volume of business in Calcutta has been however better and a slightly improved offtake is to be reported. Larger consignments from Karachi are reported for Calcutta.

Stocks in India are not very large and though the prospects of new corp are fairly good the May positions are already at a discount of 4 annas as compared with tht ready positions. For this reason there is not much room for a heavy decline and purchases at dips will prove beneficial.

FOREIGN

Crops in Australia as previously reported are already smaller and the sowings in Canada as detailed below are less than last year. The yield per acre also as compared with last year is considerably lower. Stocks though large in Canada are gradually being abserbed and with poorer new crop prospects there is little ground for values to decline under sheer pressure to sell.

Estimates issued by the Canadian Bureau of Statistics put the area sown with winter wheat at 631,000 acres, compared with sowings on 595,000 acres last autumn. Winter rye sowings total 422,000 acres, compared with 472,000 last autumn.

The provisional estimate for the grain production of Canada for 1933, as compared with that for 1932, issued by the Dominion Bureau of Statistics is as follows:—

	1933 Bushels	1932 Bushels
Wheat	271,821,000	428,514,000
Oats	311,312,000	391,561,000
Barley	63,737,000	80,773,000
Rye	4,725,000	8,938,000
Mixed grains ...	33,204,000	39,036,000
Flax seed ...	678,500	2,446,000

This estimate of all the principal grains is lower than the estimates given in September. The changes are mainly slight, except in the case of rye.

PRAIRIE PROVINCES

The estimated yields for the Prairie Provinces as compared with 1932 are:—

	1933 Bushels	1932 Bushels
Wheat	253,000,000	408,400,000
Oats	181,071,000	245,726,000
Barley	47,653,000	63,114,000
Rye	3,645,000	7,738,000
Flax seed ...	613,000	2,367,000

This estimate of wheat for the Prairie Provinces is 4 per cent. under the September estimate. Manitoba is unchanged. Saskatchewan is down 3,000,000 bushels, Alberta down 8,000,000 bushels.

EASTERN CANADA

Eastern Canada estimates are slightly higher than in September. Since threshing is practically completed, the present estimate is more reliable.

The average yield in bushels per acre for the whole of Canada as compared with 1932 is as follows:—

	1933	1932
Wheat	10.5	15.8
Oats	23.0	29.8
Barley	17.4	21.5
Rye	8.1	11.6
Flax seed	2.8	5.4
Mixed grains	28.4	33.0

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE E AN IDEAL INVESTMENT.

ECONOMIC PLANNING FOR BENGAL

It is highly significant, but it is not altogether surprising to us, that Sir John Anderson, speaking at the St. Andrew's dinner in Calcutta, and Mr. Nalini Ranjan Sarker, speaking to the students in Dacca in the same week, have, referring to the economic problems of Bengal, covered more or less the same ground. It has been one of our special fads that the best way of establishing friendliness and common understanding among apparently opposing camps is to evolve economic programmes which are demonstrably in the best interest of the Government and the population. Politics is a disintegrating force. Economics is a unifying influence. Sentiment and prejudice are apt to cloud the vision of those who are purely politically minded. Those, who are devoted to the study and pursuit of economics, must needs reason, think, argue and base their conclusions on known facts and verifiable statistics. It is true that even in reference to economic problems, there are, in India, the European point of view and the Indian point of view. Such differences as have manifested themselves are due, in our opinion, to the lack of appreciation of fundamentals. If only the leaders of business in the European and Indian groups address themselves to economic problems free from bias and pre-conceived ideas, and determined to find solutions on intrinsic merits, much of the gap between the Federated Chambers of Commerce and the Associated Chambers would be narrowed. This is our firm and settled conviction which experience and observation of six years has only tended to confirm and emphasise.

* * *

In our columns, we have always advocated, and insisted on, due and proper consideration of all economic problems from the standpoint of national interests. We are not afraid to owning that as many of our political leaders claim to be nationalists in politics, we claim to be nationalists in economics. Loyal to a creed of this character, we have had no difficulty, however, in winning the confidence of, and securing a following among, European businessmen. The reason for the substantial support and backing which we have received from European friends is that it has always been the endeavour of *Indian Finance* to interpret all current problems in terms of fundamental principles. Sir Purshottamdas Thakurdas a member of the Legislative Assembly was not exactly a *persona grata* with, for instance, the members of the European group but his European colleagues on the Board of the Imperial Bank have always respected him as a reliable friend and safe guide. Business and economics are a solvent of dissension and difference. We are, therefore, glad that Sir John Anderson has taken a determined stand on the economic platform. He will find that this is a platform in which he will, ere long, be ably and powerfully supported by leaders belonging to parties on whom the Government are wont to look with suspicion.

* * *

Another gratifying feature of the Governor's speech is the definite recognition that unrelated, un-co-ordinated and confused activity must yield place to definite and scientific economic planning. This is a matter in which *Indian Finance* has carried on an agitation for five years. The need for planning in economic matters and the inevitability of the establishment of economic councils have been stressed on frequent occasions in these columns. It was in virtue of the strong plea urged by us, that Sir George Schuster invited Sir Arthur Salter to study conditions in India and formulate a scheme for the creation of economic councils. Sir Arthur spent a brief but fruitful three months in India; and at the end of it, he submitted a memorandum outlining the scheme of a Supreme Economic Council. Partly due to the political chaos that subsequently prevailed, partly due to the financial difficulties in the central and provincial budgets and mostly due to the tradition of scant courtesy paid by our Government to the reports of commissions and committees, the recommendations of Sir Arthur were consigned to oblivion in the Secretariat record room. So far as the Government of India are concerned, no action has so far been taken; nor are there indications that any early action is likely. It is, therefore, satisfactory that credit in this regard should go to the Governor of Bengal for taking the initiative in a matter that is admittedly of equal importance in the provincial and central fields. If Bengal makes a success of this experiment, it is sure to be an incentive and stimulus for the creation of like machinery in other provinces as well as at the centre.

* * *

Meantime, we are glad that Sir John realises that there is no use putting off constructive efforts till "the turn of the tide." In fact, the question he asks himself is whether Bengal can afford to wait for the turn of the tide. "I think not"—answers the Governor. "Our hopes in this respect have been disappointed time and again. We look around on a world still far from very settling conditions. Hard facts confront us everywhere in the economic sphere." If we keep still and wait in the hope that the day will come when hard facts confront us no more, we will have to wait indefinitely. The Governor is convinced that the most urgent problem for him is to give the impetus to a sustained endeavour to solve the problem of the reorganisation of the rural economy of the province. He is convinced that such an effort must be made; and he is determined that it shall be made. There can be no salvation for Bengal if the effort is either delayed or is made in a half-hearted fashion. The resolute terms, in which the Governor has expressed himself in this matter, are a happy augury for the economic plan he has in mind.

* * *

At the very outset, Sir John realises that the economic conditions of Bengal have a deal to do with the general atmosphere of the province being favourable to the propagation of subversive doctrine. As the Governor says, part, certainly, of the reason is to be found in the gloomy tinge that the outlook, both political and economic, is apt to assume for the Hindu intelligentsia the educated middle class, the *Bhadralog* youth. He examines the statement in greater detail and shows real understanding and sympathy. As for the political factors, he advocates the view that the political outlook is not nearly as black as it is sometimes painted. It is on the economic outlook, however, that he lays stress. And he again emphasises that middle class unemployment accounts for many of our young people falling an easy prey to the insidious propaganda of the terrorist. To admit this is not to be unedrstood as condonation of the aims and methods of the terrorist. The issues presented by widely prevalent unemployment are the crux of the problem. And Sir John rightly urges that the solution will not brook delay. And, why should there be so much unemployment in a province which is not poor either in natural resources or in man power? "There must, I feel, be some maladjustment somewhere in a system which keeps a vast agri-

cultural population groaning under a load of debt, eking out a narrow, a penurious existence and yet, in most districts, lacking useful occupation for nearly nine months out of the twelve. That is, of course, putting the case very crudely and without the qualifications which a scientific analysis of the position would have to include, but it presents the salient facts that the rural economy of the province is dependent for its motive power on a machine running continuously at only 25 per cent. of its capacity".

* * *

It is by this process of reasoning that he has arrived at the conclusion that to rehabilitate the rural economy of the province is the only salvation ; that agriculture is and must always be our mainstay ; and that we need a Recovery Plan here as sorely as any country or state in the world. We agree that the Governor's emphasis on rural economy is quite proper and natural. But there is a fundamental difference between the point of view of the Governor and our point of view. Sir John believes that we must concentrate to raise the economic status of the agriculturists, and that while this is done, other things will follow—industrial prosperity, healthy trade conditions, the development of primary education, a great extension and scope for employment of the youth of the middle class, Muslim as well as Hindus, and with it one may hope, the easing of our budgetary position. On the other hand, we believe that an economic plan is nothing if it is not complete and comprehensive. By all means, place as much emphasis as possible on rural economy but on no account should you neglect the other aspects of Bengal economy.

* * *

So far as we understand the problem in this connection, we are of the opinion that the kind of Economic Council that will be set up will have to tackle four main problems as fundamentally affecting the well-being of Bengal. These four problems are: (1) the organisation and rationalisation of jute trade from field to factory ; (2) the resuscitation of coal trade especially with a view to give relief to the owners of second-class collieries who are mostly Indians; (3) relief to encumbered tea estates amongst which also Indian ownership predominates; and (4) reorganisation of the province's finances so as to put new vitality into the hundreds of loan offices which now find themselves on a condition in which short-term deposits have been frozen in advances on properties.

* * *

We have in mind schemes in which, for the relief of tea trade, Bengal and Assam should take concerted measures in the direction of establishing a Tea Industrial Bank. So far as the coal trade is concerned, the plan, which we would suggest, is one that has already been discussed in these columns ; and the plan involves the erection of a huge generating plant for electricity in Raneegunge, so that by the use of coal in which no transport charges will be involved, the major part of the province will be supplied with cheap power. In a scheme of this kind, Behar and Bengal could fruitfully combine in evolving a satisfactory plan. As for loan offices, the Land Mortgage Banks that are now to be created must be so fashioned as to be able to take over such advances of loan offices as have adequate security. In the course of this article, it would not be possible to discuss these matters at any great length, we can only furnish a bare outline. But the point to emphasise is that in regard to the special economic problems of Bengal, each one of them admits of ready and easy solution provided the Government and the population unite in the determination to achieve success. On the side of the Government, Sir John realises that it will call undoubtedly for both sympathy and imagination ; and he has declared, in unequivocal terms, that these are qualities "in which my Government do not intend to be found lacking".

At the same time, the co-operation of the public is equally essential. The fibre and quality of the people of the province will be tested. If the people of the province stand the test, the next stage is the finding of the money. Here is another heartening assurance from Sir John ; "I can promise it will be found, for money spent for the purpose I have outlined with the assured co-operation of leaders of opinion will be money well-spent, bringing an adequate return".

* * *

If the Bombay Government could have raised, from the public, loans for Rs. 10 crores for a development scheme which has been one of the biggest bungles, what difficulty should there be for Bengal raising funds for the reorganisation of jute, coal, tea and banking business? The monies raised will be used in enterprises which will be really and substantially productive. The incomes from these enterprises will be sufficient to cover the interest and sinking fund service. With the backing of productive enterprise and with a guarantee of the Bengal Government, all the sums needed for the economic plan should be easy to find. Bengal is specially rich in that class of people who believe in investment in giltedge. The securities issued by the Government should make be a special appeal to them. On the score of the amount needed for the plan, there need be no misgivings of any kind.

* * *

Will there be any risks in a plan of this nature? That is the final question which Sir John has set to himself. As between the risk in the present situation and the risk in a new but fruitful experiment, it is far better to venture in the belief that it is better to advance than stagnate.

* * *

Sir John has discussed the various details of rural economy and the measures he proposes are: (a) establishment of a system of Land Mortgage Banks: (b) a comprehensive scheme of Debt conciliation; (c) compulsory adjustment of accumulated Debt under some suitable judicial procedure which will ensure that every interest will be fairly dealt with; (d) rural insolvency procedure and (e) development of co-operative institutions.

* * *

All these are admirable objects. We would appeal to His Excellency to give due consideration to the view that we have indicated in favour of making the plan as comprehensive as the economic needs of Bengal require. To emphasise on rural economy and to confine our attention to rural economy would not be in accord with the conception of comprehensiveness involved in economic planning.

DISCRIMINATION & NATIONAL ECONOMY

We are astounded that a nationalist like Mr. S. C. Mitra should have declared in the Assembly that no statutory provision should be made for a definite percentage of shares and directorate held by Indians as it would constitute discrimination. It is not surprising that this extra-ordinary declaration won for him from the European Benches compliments on his "statesmanlike" attitude. It is easy to be a "statesman" in these days, if statesmanship consists in truckling in to vested interests and compromising the interests of the nation. Mr. Mitra has probably overlooked the fact that the Government of India themselves have already acknowledged the legitimacy of the principle of reserving a percentage of capital and directorate for Indians and have acted upon this principle in more than one instance, where definite pecuniary assistance such as bounty or subsidy is to be given to an industry by the state. Such specific restrictions have been imposed in order to safeguard Indian interests. For instance, Section 5 of the Steel Industry Protection Act of 1924 laid

down that in the case of incorporated Companies, such Companies should be registered under the Indian Companies Act of 1913 with rupee capital, that *a reasonable proportion of the directorate should be Indian* and that facilities for the technical training of apprentices should be provided. Similarly, when the Indian Radio Telegraphic Co. had to obtain a license from the Government, the Government laid down in their agreement with the Company that *60% of the new capital should be reserved for Indians*. As regards Civil Aviation also, the Government have adopted *the principle of reserving a majority of the directorate for Indians*. The External Capital Committee, in fact, approved of the imposition of such stipulations in order to safeguard Indian interests. At the second Round Table Conference, it was generally agreed that the conditions recommended by the External Capital Committee should be applicable to Companies which receive a subsidy or bounty, although Sir E. Benthal objected to the stipulation regarding the reservation of certain proportion of directorate for Indians. The reservation of a percentage of directorate and capital for Indians has been one of the minimum demands of even moderates like Mr. Jayakar and Sir Pheroze Sethna, and we are at a loss to understand how Mr. Mitra looks upon it as an instance of racial discrimination. It was not a "wily" Bombay Capitalist, but Mr. Nalini Ranjan Sarker who suggested in his speech at the Bengal National Chamber after the publication of the report of the Reserve Bank Bill Committee which met in London that 75% of the share capital and directorate should be reserved for Indians.

* * *

It is easy to see how once you yield on fundamental issues, you walk down the slippery path. The British Indian Delegates at the three Round Table Conference's and the J. P. C. unwarily, tacitly or expressly, accepted general propositions which were highly detrimental to Indian interests and then tried to qualify such acceptance by reservations when the general acceptance was found to go too far. The result has been disastrous. While at first the plea was for "no discrimination" against British firms or companies established or registered in India, the claim subsequently was for non-discriminative treatment not only for non-Indian firms carrying on business *in India* but also firms doing business *with India* ; and now Sir Samuel Hoare wants to ensure such non-discriminatory treatment even for Dominion nationals on the preposterous ground of the Queen's proclamation, which never concerned itself about any Dominion save the Dominion of India. Even Sir Joseph Bhore has admitted that this standpoint of the Secretary of State regarding the Dominions has created resentment in India. Unfortunately, Mr. Mitra like several others has been misled by the term "discrimination" which is not accurate and the odour of which is likely to frighten people. It is not so much a matter of discrimination as of equalisation and the question essentially is one of safeguarding national interests. While no one desires to penalise non-Indian intersts simply because they are non-Indians, it is the nationalist contention that in the determination of a national economic policy, the interests of India and India alone must be the sole criterion. Prof. H. J. Laski has observed that "freedom of contract only begins when equality of bargaining power begins". To speak of "no discrimination" when the whole basis of administrative and economic policy is discrimination against Indians is a monstrous joke which, we thought, even our present M. L. A.'s would have seen through.

FRENCH POLITICAL GAMBLE

The fall of the Sarraut Ministry on November 24, after barely a month's tenure of office, cannot, by any means, be described as a Ministerial crisis. In France, Cabinet crises have come to be the normal feature. The Chamber of Deputies seems to be moribund institution, with groups excelling one another in reckless abandon. Prior to the final scene in Comic Opera, the Right moved for the suppression of the article, in the Finance Bill, imposing cuts on civil servants' and was rightly defeated by 326 votes against 237. The Right, by all tokens, was expected to help the Finance Bill through. If it moved against any taxation proposal, which might inconvenience the *Bourgeois* elements of society, it would be comprehensible. But, that it should sponsor the cause of civil servants, whose interests, judging by past events, seemed to be under the special care of the Socialists, led by M. Blum, rather baffles understanding. What could have influenced the Right to encroach upon the preserves of the Socialists? Can it be due to the repercussion of the results of German elections? If it were so, it should be for considerations of a freshborn love for the employees of the State, which the triumph of Hitler is supposed to have brought into greater jeopardy. Then, it is simply a case of the sympathy for the State being extended to its servants. Or, the attitude of the Right must have been actuated by motives of offering a sop to civil servants for future accommodation in tax-evasions.

* * *

What of the Socialists, then? They always stood for the economic well-being of salaried and wage-earning classes, among whom the State employees find themselves. The feelings of the Socialists on the triumph of Hitler cannot be other than those of the Right. Against the German bogey, France is one, and united. The Left has in fact greater cause for grouse against Nazidom, if their kinships are international, as commonly believed. The deplorable fate of the German social-democrats and communists should yet be green in the memory of French Socialists. The Consolidation of Nazidom should, therefore, have roused the Left, even more than the Right, to hug the cause of the State employees to its heart. But, is it possible that its love for them is so superficial that it can leave them in the lurch, because its

opponent, the Right, has chosen to embrace their cause? The poser is absurd, on the face of it. The Left seems to have been so genuinely alarmed by the results of German elections that it has deliberately chosen to see to the balancing of the budget, and thus keep the country in readiness for the coming storm from across the eastern border. It is clear, therefore that the Left is ready to vote for the cut in civil servants' salaries, however reluctantly, in view of the imminant danger to the country from foreign aggression, fancied or real. It is up to the Left to restore the cuts in civil servants' salaries, when the storm has blown over.

* * *

This clarification is necessary, in order to understand the victory of the Sarraut Ministry against the Right. It is, however, the failure of Press correspondents to understand the implications of the vote on the issue of the suppression of the article, imposing cuts in civil servants' salaries, that had caused their surprise, when the Government was defeated on the self-same issue in a milder form, only a little while later.

In fact, the Sarraut Government was beaten by 321 votes against 247 on a Socialist amendment to the article, proposing to raise the limit of exemption, below which cuts would not operate, from 10,000 to 12,000 francs. The Socialists, by their amendment, made it clear that their love for the civil servants cannot be wholly vetoed. The slogan, "Union before Hitlerism", could only cause the Socialists to countenance the principle of a cut in Civil Servants' salaries. But, the Left was equally for displaying, at the same time, its interest in the cause of Government employees, in an unmistakeable manner. The least the Socialists could do for the civil servants, is to raise the exemption limit from 10,000 to 12,000 francs.

* * *

By this amendment, a larger number of civil servants would have escaped the cut. The exact number of employees that would have escaped cuts in their salaries, and the consequent drop in Government schedule of economies are not yet available. Until the mail brings the full particulars, it is idle to speculate upon the wisdom, or the unwisdom, of the Government in opposing the Socialist amendment. But, the first impression is that the Government has acted unwisely. The Socialist allegiance to the principle of the cut should have been welcomed with a generous gesture. When once the principle has been conceded by the Socialists, it will only be a question of time before they approved the cuts, to the requisite limit.

* * *

For aught we know, alarms will rain thick and fast, in the near, if not the immediate future. Hitler can be counted upon for enacting some more stunts. If his own resources fail, General Goering will come in handy. There is the Saar problem, towards the solution of which General Goering, or some other Nazi fire-eater, is bound to stage forceful penetration, sooner or later. The demoralising triumph at the recent elections in Germany will not be laid to rest, without raising some dust. Then again, there are large sections of the French people, who have found sterling to be the surest shelter against the vagaries of speculation. A third ground for alarm is President Roosevelt's gold-buying policy. In between these scope for alarms of major or minor magnitude, the French Government can find an excuse to rope in a section of the escaped civil servants. But, as we have already pointed out, it is premature yet to lay, once and for all, the blame at the door of the Government.

* * *

When M. Herriot has declined to form a Ministry on grounds of ill-health, President Lebrun's choice had fallen on M. Chautemps, who formed a Cabinet. All the Ministers, except M. Maarchandeau, the new Budget Minister, and M. Reynaldi, Minister of Jutice, held portfolios in the last Government. But, the latter served in the Herriot Cabinet of 1924. So far as is known at present, M. Chautemps, the Premier, intends to balance the budget without delay, defend the parliamentary regime, and watch France's security. The last phrase must prove pleasing to the Deputies. M. Paul-Boncour continues as Minister for Foreign Affairs, if only as further proof of ensuring France's security. Another factor of considerable value, in rendering the Deputies more alive to a sense of responsibility and more keen on presenting a united front, is the continued heavy purchases of sterling and the consequent wild talk of the devaluation of the franc, notwithstanding well-informed financiers' views to the contrary. The indications are propitious for the success of the Government's financial proposals. But, prophets are not wanting to forecast an early fall of Chautemps' Cabinet, thus paving the way for a concentration Government under M. Herriot or M. Daladier. But, with adequate circumspection, the present Government can tide over the difficulties, to the immense relief of the French public and to the great satisfaction of realising "Union before Hitlerism."

EXPERT TESTIMONY.

Mr. F. V. Rushforth, who was a member of the Central Banking Enquiry Committee and who represented European commerce thereon, writes to us from Edinburgh under date November 8.

* * *

I have always maintained that in matters concerning India it is advisable to trust the men on the spot, and I have deprecated interference by partisan or altruistic folk in this country whose knowledge is usually either incomplete or out of date. Your comments, however, on the Reserve Bank in the issue of *Indian Finance* received this mail, call for support; and although this letter may be too late to be of any influence, you deserve commendation for your efforts to postpone the creation of the proposed Bank.

* * *

Personally I have been at a complete loss to understand why the recommendations of the Indian Central Banking Enquiry Committee have apparently been utterly ignored. They were the unanimous recommendations of a body of men of extraordinarily diverse opinions, but all of whom were intimately acquainted with Indian business and banking conditions. Why it should have been necessary to send another body of men to London to draw up the detailed provisions of the bill passes my comprehension; and it could hardly have been considered a compliment to that ablest of chairmen, Sir Bhupendra Nath Mitra, whose power of ignoring minor differences in order to secure agreement on fundamentals called forth the admiration of all his colleagues.

* * *

I should like to utter a warning. Since 1919 practically every important financial decision of the Govt. of India has been vitiated by unanticipated international complications. The decision to fix the two shilling ratio was made a few weeks too soon and resulted in the loss of millions in the vain endeavour to maintain it. The fixing of the one and six-penny ratio was followed by a sudden fall in the price of cotton and a steady and continuous fall in world prices which would have broken the ratio if the departure of London from the gold standard had not intervened. You yourself have frequently commented on the losses caused by miscalculations or ignorance of market conditions when loans have been issued. I would ask Indians and Europeans in India to consider whether it is wise to initiate such a vast experiment as the Reserve Bank at a time when the banking and monetary systems of the world are being put to the severest strain they have ever experienced. I maintain that, at the present time, there is not suffi-

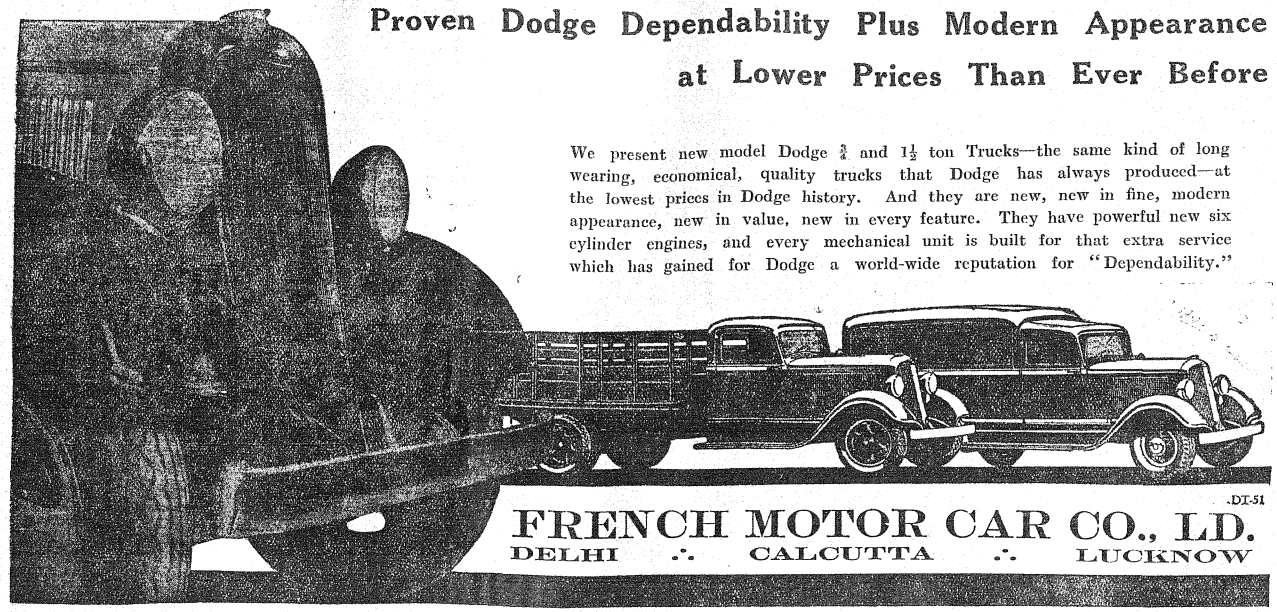
Proven Dodge Dependability Plus Modern Appearance at Lower Prices Than Ever Before



We present new model Dodge ¾ and 1½ ton Trucks—the same kind of long wearing, economical, quality trucks that Dodge has always produced—at the lowest prices in Dodge history. And they are new, new in fine, modern appearance, new in value, new in every feature. They have powerful new six cylinder engines, and every mechanical unit is built for that extra service which has gained for Dodge a world-wide reputation for "Dependability."

DELHI ∴ CALCUTTA ∴ LUCKNOW

cient economic margin in the banking system of India to permit a created Reserve Bank to function without causing intolerable friction and ill-will among the subsidiary units of the system. The Bank should evolve as a result of an economic demand, and should not be created to be suspected as a political parasite.

I would commend, to the notice of all interested, the section of the Indian Banking Committee's Report dealing with the Reserve Bank, and especially to paragraph 614.

TRADE IN 1932-33

The *Review of the Trade of India* in 1932-33, which was issued by the Department of Commercial Intelligence and Statistics during the week is, as usual, replete with statistics set out in the form of attractive tables and charts. Much of its contents, the public are already familiar with, through the material presented a few months ago in *Indian Finance Year Book*. We cannot, it is true, pretend that we have been abole to compile the trade section of the Year Book with such comprehensiveness and with such minuteness of detail as an official department can and is expected to do. But the interest of the volume to the general student of India's trade and commerce suffers from the belated nature of the publication. It may, however be supposed that the aim of issuing a volume like this in addition to the Blue-Book on the *Monthly Sea-Borne Trade* is to enable each section of import or export trades to view the relevant facts and developments as set out in a book of proper proportions. In this view, those, who are responsible for the compilation of the volume, deserve to be congratulated on the care and succinctness with which they have recounted the tale. But its importance to the general student, however, cannot be however exaggerated. Besides one cannot help thinking that after, having had access to the more heartening figures of India's foreign trade during the first half of the current fiscal year, a recital of our unpleasant experiences in 1932-33 is a somewhat unwelcome reminder. When the daily newspapers publish the extracts from this volume under the headline, "Deepening of Depression" or "Calamitous Decline in Commodity Prices," the psychological effect on the vast reading public is not exactly conducive to the buoyant sentiment which under all conditions must be the basis of a trade revival.

But even buoyancy of sentiment cannot be nurtured at the expense of a correct appreciation of facts. And it may well be that a reminder of the conditions of 1932-33 will help all the more the recognition of the pace of advance which we have made since April 1st last. The opening lines of the *Review* are as bad a comment as one can make on the ability of man to turn natural advantages to his own material good. The monsoon of 1932 was fairly normal and gave on the whole well distributed rains in spite of a rather weak start and a prolonged break in August. The season was generally favourable and the crops fairly good. Only in the case of rice was there a fall of 7 per cent. in output as compared with the previous year. But it must be remembered that the previous year had an exceptionally good harvest and that as compared with the average of the preceding five years the harvest of rice during 1932-33 should be considered quite good. In sugar cane an increase of 17 per cent. over the previous record is noticeable. Cotton and seasamum increased by 12 and 14 per cent. respectively, groundnuts by 25 per cent., and castor seed by 1 per cent. In jute it is only to be expected that the effects of the restricted cultivation should show only a slight increase over the previous year's outturn. The wheat acreage was 3 per cent. less than the preceding season but slightly above the average of the past quinquennium. Rape and mustard and linseed also showed increases of 4 per cent. and 10 per cent. If nature was kindly, so was temper in industrial classes and areas. The year 1932 must be considered good so far as industrial disputes are concerned; for the number of strikes and lockouts was the minimum recorded for any year since 1920.

* * *

But the wealth of India is determined not by the outturn of the respective crops but by her experiences in the foreign markets. The experiences in the foreign markets are in their turn determined by the course of prices. The year 1932-33 is important for the fact that, before we were well on into the year, the slight improvement in price, which occurred as a consequence of the abandonment of the gold standard by Great Britain and the linking of the rupee to sterling, was more than lost and that the latter half of the year was marked by the rapid depreciation of the yen and the energetic expansion of the export trade of Japan particularly with this country. The course of world prices, too, had started on the downward

trend. And though for a time in 1932 there were found signs of a revival of trade and increase in wholesale prices, it was not long before disillusionment came on a prematurely hopeful business world. For the first five months after the abandonment of the gold standard that is, October, 1931, to February, 1932, the Calcutta index number was steady ranging between 96 and 98 but from March, 1932, the decline started again. Similarly in the case of the U. K. the index in September, 1929, was 135.8 and in March, 1933, 97.6, which means a fall of over 29 per cent. In the case of the Calcutta index number the fall in wholesale prices during the same period was as 43 per cent. Other countries had similar experiences and only in Japan, as a consequence of the depreciation of the yen, commodity prices internally maintained a comparatively firmer tone.

* * *

An examination of the index numbers for the various commodities exported from India would show that the distinct improvement in prices of most of the staples which marked the close of the year 1931 and the beginning of the 1932 was not in evidence later. Considered in detail, it is found that the heaviest declines in December, 1930, were in cotton raw, jute raw, wheat and oilseeds; in December, 1931, in oil seeds, tea, hides and skins and rice; in December, 1932, in jute raw, oilseeds and tea, rice and hides and skins; in March, 1933, in oilseeds, rice and jute raw, hides and skins and tea; and in June, 1933, in oilseeds, jute raw, rice, cotton raw, and hides and skins. It will be thus seen that the heaviest declines have invariably been in raw materials. Among manufactured articles, the slump in prices of jute manufactures was consistently heavier than in the prices of any other manufactured article, cotton manufactures and metals following in order. Of agricultural products, sugar suffered least, largely as a result of the increased import duties on this article.

* * *

As the prices of agricultural commodities have fallen much more than those of manufactured goods the national income of India has shrunk considerably. The *Review* supplies a series of tables showing the value and production of the principal crops in each province during 1928-29 and 1931-32. The reason for choosing 1928-29 is obvious, namely, that the depression started within six months of the close of the fiscal year 1928-29. One might even suggest that the fall in agricultural prices, which is such a marked feature of the present depression, is even longer-dated and therefore September, 1929, which is universally regarded as the beginning of the present depression, saw in the case of India only an accentuation of the decline in agricultural prices. In the table supplied in the *Review* crops have been evaluated in most cases by taking the average prices in each of the crops in the different provinces. It is claimed that these figures represent only the money which the cultivator gets for his produce, that is, the real agricultural income, exclusive of transport and other charges. If the difficulty of excluding these factors is recognised, then it will be seen that the figures are only a general approximation of the volume of money which the agriculturists get and which, in the general view of economic conditions in the country, may be taken to represent the purchasing power throughout the length and breadth of the land which is the basis of all commercial activity. The figures form a useful supplement to the general index numbers of agricultural prices. In fact, they may even be said to clarify the vague feeling of shrinkage of agricultural purchasing power, which one may have deduced from the tables of index numbers. The following table is reproduced to show the changes in agricultural income in the principal provinces of India:

Estimate of Agricultural-Income in the Provinces of India.

Provinces	1928-29 Values in lakhs of Rs.	1931-32 Values in lakhs of Rs.	Change in values in lakhs of Rs.	Percentage decrease from 1928-29
Madras ...	1,80,78	1,01,25	−79,53	−44.0
Bombay ...	1,20,52	66,56	−53,96	−44.8
Bengal ...	2,32,59	1,06,71	−1,25,88	−54.1
United Provinces ...	1,40,52	92,21	−48,31	−34.4
Punjab ...	76,78	37,49	−39,29	−51.2
Burma ...	63,38	29,20	−34,18	−53.9
Bihar and Orissa ...	1,35,17	71,05	−64,12	−47.4
Central Provinces	68,77	32,42	−36,35	−52.8
Total ...	10,18,51	5,36,89	−4,81,62	−47.3

It will be found that of all the provinces, Bengal has suffered most owing to the low prices of jute. Burma shows a decline almost as great as Bengal and this is chiefly due to the disastrous fall in the price of rice, the fall in the case of Burma being only slightly under 54 per cent., the figure for Bengal. Bombay and Madras have had a fall of 44 and 45 per cent. respectively. The United Provinces seems to have suffered least of all the provinces the decline in this case being a little under 35 per cent. Taking all the provinces together, the decline in agricultural income amounts to a little over 47 per cent., so that it may be said that the income of the agricultural masses of India has been reduced by nearly half in 1932-33 as compared with 1928-29. In estimating the significance of this terrific shrinkage in agricultural income it is necessary to utter one note of caution. It should not be forgotten that in India the cultivator and even the bigger landowners, produce to some extent for personal consumption and that, so far as the foodstuffs go, the change in the agricultural prices does not affect them as seriously as they may be supposed to in other countries. But the expenses which involve cash payments have to be met only from the sale proceeds of the crops. For the average-man, rent, interest on debt, prices of clothing and other necessaries of luxuries have to be met only from the proceeds of the sale of the harvest. One may easily imagine therefore how much the internal trade of India should have shrunk as a result of the fall in agricultural incomes.

A MODEL SPEECH

"THE PRESENT SITUATION"

By G. L. M.

The last refuge of a politician in distress is a speech on "The Present Situation". If you desire to speak and don't know exactly what to speak on, you cannot choose a better title than "The Present Situation". In it, you can wander if not from China to Peru, at least from Karachi to Calcutta. You can start from the Indian Mutiny and end it up by a glorious vision of the India that is to be. While dealing with the *Present* situation, you can link it up with the Past, and link it again with the Future. It is only while speaking about the ratio that you have to de-link things. For those who desire to address on this subject and haven't done so, the following set speech is compiled. It may, of course, be suitably modified, altered, amended as occasion demands. But it can form the framework like the White Paper Scheme.

To begin with, it is assumed that the Chairman (or the President) will introduce the speaker of the evening (*evening for purposes of speech lasts till 12 midnight*) as follows: "The learned lecturer of to-day needs no introduction to you". The Chairman must immediately conclude his preliminary remarks after this by saying "I will not now stand between you and the speaker as I am sure you are all *dying* to hear him. Medical aid, however, is unnecessary as the speaker will now address you and you will be revived." (Cheers).

The speaker must then address the audience somewhat in the following manner. It is strongly recommended that he must sip from a glass of water while making this oration.

"Mr. Chairman, Ladies (if any present) and Gentlemen,

I am very grateful to this—(*Association or Conveners of the meeting*) for having invited me to speak to-day on the most burning topics of the day. It is indeed a rare privilege to be able to address such a distinguished audience as I see before me.

"Gentlemen, you know that our country is passing through most critical times. But it is not our country alone that is in the vortex of a crisis. The whole world to-day is undergoing a great upheaval, a tremendous transition. At no time in the history of civilisation, have such world-wide and important issues faced mankind and demanded imperative solution. Unless we solve them, we all—that is you and I—are doomed. Disaster to civilisation is the only alternative to our failure to grapple with the fundamental problems of to-day.

"Ladies and Gentlemen, I would earnestly appeal to you to see round you—not in this hall but in the world in which we move and have our being. After all, one touch of nature makes the whole world kin. After all, there is nothing like keeping your eyes and ears open as you pass on to your daily task. And what do we find? What does even a cursory glance at a daily newspaper show us? Where is this old world drifting? What are the forces that are operating? What do we see on the horizon? Behind the confusions, perplexities, dissensions and wrangles of to-day, some clear and definite tendencies are discernible. It is obvious that below the various and complex problems and tendencies, I have referred to, are the eternal verities which sustain life and uphold society. These eternal verities are the breath of our life, the very fundamentals of our existence, individual and social, and they are neglected only at our peril. It is only in the light of these vital and immutable principles that we must fashion our actions and shape our policies. I repeat they are neglected at our peril and the peril of those unborn generations to come which we collectively describe by the brief epithet of posterity. It is therefore not only essential but imperative that we must re-examine the fundamentals of our thought, revalue our current values, challenge our accepted standards—in short re-address ourselves to the crucial questions of the day which press for a reply and whose solution can no longer be delayed. Delay, in fact, is dangerous in every sense of the word. For the issues cannot be avoided even by an ostrich-like policy of pretending that they do not exist. They do exist; they confront you every moment; they seek an answer every day. How can you deny their existence or refuse their solution? The responsibility of those who mould public opinion and guide the destiny of our country is indeed heavy. They need to realise it and realise it without losing a moment. The harder the task, the nobler the call.

"Ladies and Gentlemen, the world is calling to you for help. Will you not go to its succour? The teeming masses in this land of ours, naked and starved, call you to the villages. Will you not lend your hand to uplift them—morally, materially, socially, geographically? We must bend all our energies on constructive work. Life is one and indivisible; it knows no compartments. Let us organise the masses, co-ordinate our activities and consolidate our forces. The time for speeches has gone; the time for action has come. The duty of the younger generation is especially great in this respect. The students of to-day are the citizens of to-morrow. They are the architects of the destiny of our nation—nay, of the whole humanity. The East has a message of its own to deliver to the world. India has a unique contribution to make to the world-thought and world-movement of to-day. Shall we not make it? Shall we allow things to drift endlessly as we have been doing hitherto? *No*! With all the emphasis at my command, I say No. I shall continue to say it even if I am alone in saying so. We must continue to keep abreast of the times. We must march upward and onward towards the ultimate goal to which we all aspire—Dynamic Progress, Universal Humanity! We must hand over the torch of enlightenment to the nameless generations which are hidden in the womb of time! Sisters and Brothers, let us not be down-hearted or depressed. I see clearly silver linings in the dark clouds which have gathered on the horizon. The dawn is coming. A happier day for India—nay the whole of humanity—is coming as surely as the golden day follows the dark night. Let us therefore dedicate ourselves to this great task from now. Let us unite and work together. Let us forget our petty dissensions and sink our differences. Unity is the prime need of the hour, the fundamental condition of progress—national or international. Make a resolve to consecrate yourselves to this high purpose and endeavour to translate it into your life.

"Ladies and Gentlemen, I need not take up more of your valuable time. I thank you for the patient hearing you have given me."

Applause will naturally follow when the speech is concluded: mainly for the fact that the speech *has been* concluded.

This speech can also be delivered under the title "The Work Before Us", "The Present Crisis", "Mankind At Cross-Roads", "The Goal of Life", "Universal Humanity", "A Plea for Constructive Work", "Organise the Masses" or anything else you want.

It can be delivered anywhere you want to. At the Rotary Club, at a students' meeting, at a meeting under the auspices of the League of Nations Union, at a political gathering or a social conference. It is eloquent and inspiring and yet non-controversial, non-partisan, thoroughly impartial. It simply says nothing at all at enormous length—like many of the speeches it is our painful duty to hear from day to day.

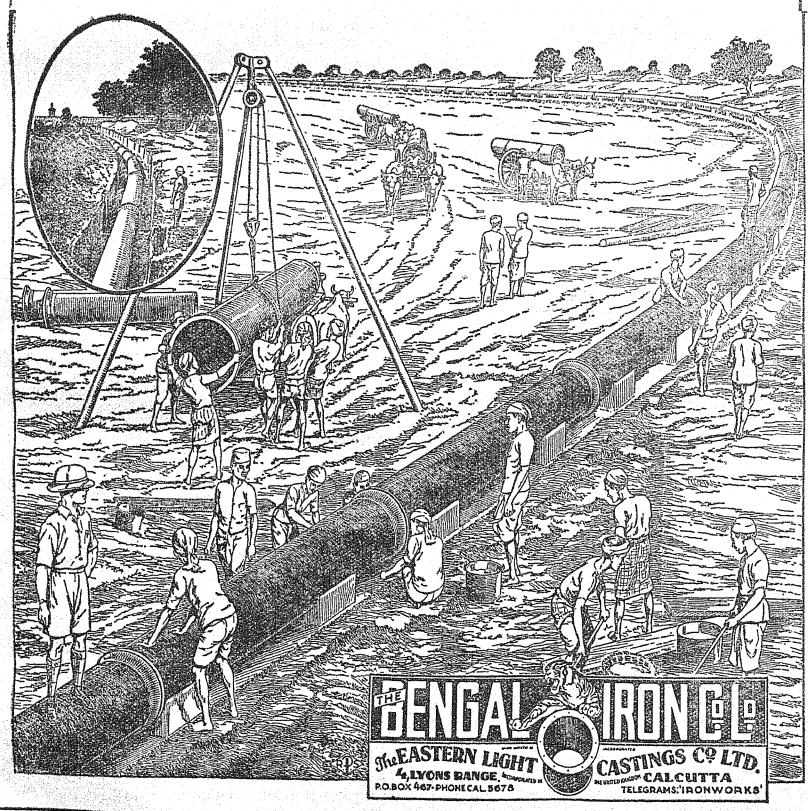
CAST IRON PIPES
for Water Schemes

Extract from "RANGOON GAZETTE" on the AKYAB WATER SUPPLY SCHEME, Dated 25-4-1933.

"The Completion of a work of this magnitude in so brief a time will be a creditable achievement, and if not indeed a record, certainly an exceptional accomplishment involving a considerable amount of organisation and hard work by all concerned. The BENGAL IRON CO. supplied the bulk of the pipes used in one consignment, chartering a special steamer to do so".

The Contract comprised:—1,760 Tons—Sizes 5" to 20" diam, including specials the bulk of which was shipped within ten days of the receipt of the order.

The laying was carried out by Messrs. Clark & Greig Limited of Rangoon.



Clive Street Gossip

Sir Prafulla Chandra Ray, the expert in Chemistry, has become, by piquant circumstances, a puzzle and embarrassment in Currency. A puzzle because, by virtue of his association with a noted and successful enterprise like the Bengal Chemical and with many other budding ventures, his view could not be brushed aside as that of one who has no contact with practical business. And an embarrassment because the opinion of so eminent a person as Sir P. C. Ray has come to be used as the best answer and retort to the challenge of the Currency League. It is, therefore, not surprising that, on the one hand, the Government are in great glee over the support received from an unexpected quarter and that the sponsors of the lower ratio are in extreme chagrin at being stabbed by one who himself presided over a Currency League meeting in 1926. One or two professors of Bengal have also lent their pen and propagandist skill for the existing ratio. The *Ananda Bazar Patrika,* admittedly the premier vernacular paper of this province, has been propounding the same views. Amongst Indian-owned papers conducted in English, *Advance,* despite its leaning towards a lower ratio, has been upbraiding the Currency League for making most of exchange and least of the Standard. It is true that our contemporary has not elucidated its own views when it refers to the question of the Standard. But the point to note in this connection is that *Advance* is to be reckoned as one belonging to that school of thought which has now arisen in Bengal and declares that eighteenpence is injurious to the Western Presidency but is just suited to the Eastern.

* * *

It was the unique distinction of the Punjab in 1926-27 to stand out from the rest of the country and proclaim that for an agricultural province, the Blackett ratio, and that ratio alone, would be suitable. The Punjab has changed its views since then. The various agricultural associations and organisations of that province are now amongst the most vehement propagandists for the lowering of the exchange value of the rupee. Even a loyalist of loyalists like Major Van Ranen has ranged himself on the side of the Currency League and is insistent that agriculture in the Punjab would be ruined unless the rupee was depreciated. An agricultural province, which stood for Sir Basil Blackett in the earlier phase of the Currency League activity, is opposed to Sir George Schuster in the present phase. But Bengal, which stood for the lower ratio in 1926-27 in the interest of rural economy, has now furnished timely aid to the present Finance Member.

* * *

I should not be misunderstood as implying that the eighteenpence believers have a large following or even an influential backing in the province. Far from it, as I will show later. But the voice that they raised and the agitation that they started was so timed as to have a profound and psychological effect. It was three or four days prior to the consideration of the ratio clauses in the Joint Select Committee meeting, that the *United Press* broadcast in New Delhi the interview of Sir P. C. Ray in regard to the alleged opposition of Bengal to any change in the ratio. Select Committee members from Bengal were considerably agitated and greatly confused by this message. Then came the articles especially in the vernacular press of the province and in one or two of the English papers. Sir P. C. Ray's opinion caused the vacillation. The press comments definitely threw the Bengalee members—some of them, I should say—into the Government camp. But for this fateful message, Sir George Schuster would have been routed on the clauses pertaining to the obligation of the Reserve Bank to buy and sell sterling at the upper and lower points corresponding to the par of exchange at 1s. 6d. sterling. Opposition victory on the ratio question in the Select Committee would have been not only of great spectacular value, but a factor that would have forced the Government to revise their attitude of truculence. Sir George's success with the help of the two votes of the Bengalee members was responsible for confirming him in his policy of refusal to budge an inch on all essentials.

* * *

In the course of the preliminary speeches during the current week's discussion on the Reserve Bank Bill in the Assembly, Sir P. C. Ray was frequently referred to and his interview was copiously quoted. Mr. S. C. Mitra, who advocated a lower ratio in his Minute of Dissent, is not quite so determined in his attitude. It is, therefore, obvious that whether Sir P. C. Ray and other eighteenpencers represent the opinion of the many or of the few, they have dealt a crushing blow, at the crucial moment, to the movement advocating a depreciated rupee. A realisation of the seriousness of the position in this regard was responsible for the visit, to Calcutta this mid-week, of Mr. Mathradas Vissanji and Mr. A. D. Shroff, the President and Secretary respectively of the Currency League. Had they come a week earlier, their mission would have been more fruitful; and it might have been possible to prevent the fullest exploitation of Sir Prafulla's interview in the Assembly debate. As it is, it was a case of a day after the fair. Changing the proverb, one might, perhaps, console oneself with the thought that it was better late than never.

* * *

It is fortunate for them that Mr. Nalini Ranjan Sarkar is to-day a power to reckon with in Bengal He has vast influence in political circles. As the

BOMBAY FORBES BUILDING, HOME STREET

President of the Bengal National Chamber of Commerce, his support means the support of the premier commercial body and the largest number of important Bengalee businessmen in the province. His connections with some of the daily papers assure for his views a respectful hearing and careful consideration. If Mr. Vissanji and Mr. Shroff achieved any success in their mission to Calcutta, the lion's share of the credit belongs to Mr. Sarkar.

* * *

I have known Nalini for nearly a decade. I knew him as a politician when I first met him in the late Mr. C. R. Das's house. I may claim to have played some part in the transfer of his affections more and more from politics to economics. I have watched him march from strength to strength in the new field he has chosen. A widower he is now wedded to economic pursuits which are now both his love and his hobby. He is one who cherishes his love with fervour and pursues his hobby with earnest thoroughness. It is, therefore, no matter for surprise that, during the past few years, he has been making speeches or writing memoranda at the rate of one per week. And his memoranda and speeches are not short affairs. They are quite longish and elaborate. Too longish and elaborate, I have sometimes thought. But he has taken up topics of great interest and developed his themes with a wealth of facts and figures culled with patience and judgment. To start with, he had practically no equipment. But his process of self-education has been both rapid and substantial. I got a full measure of his present attainments when he put forward, with eloquence and strength, the case for the lower ratio at the conference that was held of the leaders of public opinion in Bengal. This conference was got up to enable Mr. Vissanji and Mr. Shroff to meet those that count in the province, to remove such misunderstanding as existed, to restore amicable and friendly relations between Bengal and Bombay and to persuade the leaders of this province that eighteenpence was ruinous equally to the Eastern and Western Presidencies. The debate that took place was heated and spirited. Much heat was generated; but there was generated light too.

* * *

There was much plain speaking. But nobody welcomed it more than Messrs. Vissanji and Shroff. Both of them realised, from the moment they arrived in Calcutta, that many happenings had conspired to embitter and estrange Bengal against Bombay. It was pointed out to them at the conference that forcing the salt import duty down the throat of Bengal in the interest of a handful of Bombay capitalists was an outrage and an affront. Why should Tatas appoint as selling agents in Calcutta only non-Bengalee firms? Why should Ahemedabad and Bombay mills man the entire *personnel* of their selling organisations in this province with non-Bengalees? When the Indian colliery proprietors made representations to Ahemedabad mills, why should the latter speak, high and mighty, of sentiment having no place in business? When Bombay appeals to Bengal to buy Swadeshi cloth, patriotism is put forward as higher than gross and materialistic conceptions of business. When Bengal urges Bombay to buy coal from Indian-owned collieries, the plea of patriotism is said to be inapplicable. Grievances like these were paraded ; and I, for one, could not resist rubbing it into our guests from Bombay that their brethren were guilty of many sins of commission and omission. Unemployment is acute in Bengal. In the organisations connected with the handling of the manufactures of the Western Presidency in Bengal, all possible steps should be taken to ensure that some relief is afforded to this menacing problem. To the extent that Bombay has been seeking to develop business in this territory without any other thought than of their own profits, there is a strong foundation for the chagrin and complaint. Mr. Vissanji and Mr. Shroff did not attempt the impossible task of offering extenuation or pleading justification. They frankly owned that their trip to Calcutta had been an eye-opener ; and they readily promised that they would communicate their impressions to their colleagues and devise ways and means for more frequent and more intimate contacts between leaders of Bengal and Bombay so that in all cases where misunderstandings can be removed by timely intervention and apt gesture, all needful measures would be taken.

* * *

As an outcome of the deliberations, it was resolved, only one or two dissenting, that a manifesto should be issued over the signatures of leading men of this province, stating, in unequivocal terms, Bengal's support for the immediate devaluation of the rupee. The statement reads as under:

> "We are of opinion that the Rupee has been overvalued at eightenpence sterling. With a view to induce a rise in the prices of agricultural products and with a view to lighten the load of heavy agricultural indebtedness, both of which objectives are of special significance to Bengal, it is essential that the Rupee should be devaluated with reference to sterling without delay. We should, therefore, suggest that the Government should, in order to ascertain the required percentage of depreciation, appoint immediately a committee including an adequate number of representative expert Indians to study the relevant data and report thereon early, and that the Government should take prompt action on the report."

The signatories are the following: Dr. Bidhan Chandra Roy, Mr. A. K. Fazlul Huq, Rai Harendra Nath Choudhuri, Mr. Kartick Chandra Mullick, Mr. Syama Prosad Mukherji, Mr. Tushar Kanti Ghose, Mr. Mukunda Behar Mullick, Mr. Samsuddin Ahmed, Mr. N. Rajabally, Mr. T. C. Goswami, Dr. Naresh Sen-Gupta, Mr. Debendra Lal Khan, Mr. Narendra Nath Law, Mr. Kiran Sankar Roy, Mr. Nazir Ahmed Chowdhury and Mr. Adamjee Haji Dawood.

* * *

Here are leaders of various sections of public opinion expressing their definite conviction that the rupee is over-valued and that from the point of view of agriculture, which is of special significance to Bengal, no delay should take place in depreciating the currency. I understand that there are many like Rai Bahadur Badridas Goenka who are for immediate devaluation but who would prefer a definite ratio like sixteenpence. If the manifesto had been made in a way to admit of such people affixing their signatures, the statement might have received a few more influential supporters. As it is, the leader of the depressed classes, the leader of the Praja party, the leaders of the Muslim commercial community, the leaders in politics, important land-owners and eminent leaders in journalism have all come together on a common platform. This should definitely mean that Sir George Schuster and his friends will no longer be able to quote Sir P. C. Ray. Sir P. C. Ray had but a fortnight's vogue, but it has caused enough havoc. It may, however, be taken as certain that interested parties will continue to exploit his name and invoke his opinion despite authoritative contradiction on behalf of Bengal from representatives of the varied interests.

ICE
THE CALCUTTA ICE ASSOCIATION, LTD.
for Pure, Hard, Clear Ice
Rates and Particulars from—
Balmer Lawrie & Co., Ltd.
103, Clive Street, Calcutta.

The Bombay Life Assurance Company celebrates its Silver Jubilee on December 2. It has been a record of clean business and steady progress. And as it enters its 26th year, it is equipped with an organisation and supported by an adequacy of life fund to enable it to have, in the coming years, a headier expansion of business and a bigger pace of growth. It had the fortune of careful and alert watch and guidance, in its first 20 years, under the Managership of Mr. Cardmaster who has now achieved equally striking success in the Life Department of the New India. Mr. Cardmaster was succeeded by Mr. J. L. Mehta, who, I should warn, is not G. L. M. but not unlike G. L. M. One might think that the scribes given to humourous writing may not be the persons suited for serious business. This is a fallacy as is proved by the twin personality of Stephen Leacock. In brief, J.L.M. has proved, as everyone who knew him was sure, to be a worthy successor to Mr. Cardmaster. Sir Lalubhai Samaldas, who is the proud father of three brilliant sons, V. L. M., J. M., and G. L.M., has great cause to feel equally proud of the success that has attended his other child, the Bombay Life. Modest in its ambition, strict in its business methods, and scrupulous in its policy and its dealings, the Bombay Life has attained a position of impregnable strength ; and I have not the slightest doubt that by the time it comes to celebrate its Golden Jubilee, it will be able to demonstrate that its progress in the second quarter of the century of its existence was many times that of the first quarter.

I have just received the following S.O.S. from Delhi :

"I wrote you two letters and sent a telegram. Your immediate presence is absolutely essential. Kindly come on Saturday morning positively. The whole thing will collapse if you don't come. Wire date of arrival."

* * *

I am off by this night's mail for Delhi, though I feel certain that, in the present Assembly, Sir George Schuster has an easy walk-over ; and that there is nothing that one like me could do. On voting, the sponsors of the State Bank idea and of the ratio will show a goodly number but are bound to be defeated. I said, last week, that the Reserve Bank Bill has ever exercised a tyrannical influence over me. This is another proof. Next week, my readers will have my Gossip from Delhi ; meantime *au revoir*.

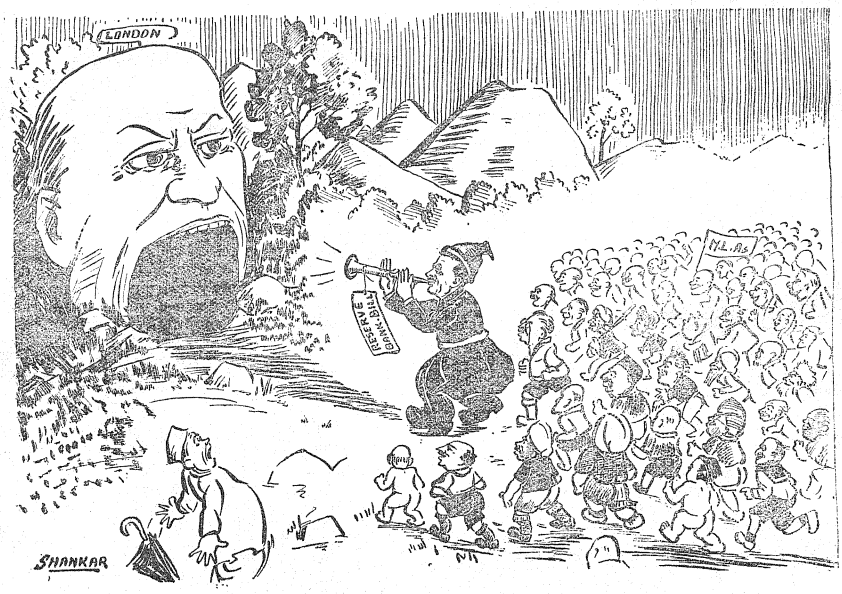
* * *

Again, another S. O. S. :

"Your immediate presence essential."

Eswesdrapper

THE PIED PIPER OF ASSEMBLY



"When, lo, as they reached the mountain's side,
A wondrous portal opened wide,
As if a cavern was suddenly hollowed ;
And the Piper advanced and the children followed."

THE GOLD STANDARD & OUR PRESENT ECONOMIC TROUBLES

By. M. L. Doherty

The long continued economic depression, which started more than ten years ago, goes on unabated, and the Governments of the World continue their fruitless efforts to find a solution. England, who took the lead in adopting the suicidal measures which brought this about: viz. deflation of the currency and return to the Gold Standard, now plays the role of sitting on the fence. And, while she watches and criticises the efforts of others, things are allowed to go from bad to worse, and great numbers of her people are being reduced to starvation and misery.

It seems incredible in an age like the present, when Modern Science and inventions have harnessed the forces of Nature to man's control, that the problem should be so difficult of a solution; but, it is more incredible still to think that our politicians, who, while professing to have the interests of the Nation at heart, ignore the lessons of history, and seek rather to perpetuate a state of affairs which has caused such widespread ruin to our Industries, than take a single practical step to relieve them. In the words of Lord D'Albernon, once a Banker and supporter of the Gold Standard, and now one of its critics:—

> The economic crisis which to-day oppresses the business world is the stupidest and most gratuitous in history. All the essential conditions—except financial wisdom—favour an era of prosperity and well-being. But the incapacity to adjust means of payment to requirements has brought about a crisis so that many are starving in a world of plenty.

It is not as though our leading politicians and financiers did not know, or, as several of them have since asserted, that the disasters we are now experiencing could not have been foreseen by anyone. On the contrary, they did know, and had ample warnings at the time: warnings by men who had made Monetary Science their life study. And so accurately was the course of events traced for them—events which would inevitably follow if Government persisted with the policy, that to-day it would seem almost prophetic. It will repay any interested reader to read through Mr. Arthur Kitson's latest little book, "The Bankers' Conspiracy", published in September this year. (Elliot Stock 2s. 6d.).

Now, while it is impossible to do justice to a subject so vast in the short space of a newspaper article, it is proposed to recapitulate some of the principal events which have led up to the present crisis, because we are again threatened with a return to that monetary system, which has been the cause of all the havoc, and by the same men who claim not to have known, or not to have been able to foresee, the present crisis. As the late Earl Balfour once said in one of his wise utterances:

> I would as soon entrust my physical health to a doctor whose knowledge of the Pharmacopoeia was that of 1844 as I would entrust the trade and fiscal policies of this Country to men who have learned nothing since the days of Richard Cobden and Sir Robert Peel.

When War was declared in 1914 the first thing to collapse, as it is the first thing to collapse in every national crisis, was the Gold Standard monetary system. When a few depositors went to withdraw their deposits, it was discovered that every Bank in the country was bankrupt under the provisions of the Bank Charter Act. Not a single bank could pay ten per cent. of its obligations in Gold. And the Banks, and the Nation, were only saved by the Government permitting the Bankers to evade their obligation and use the National Credit in the form of Treasury Notes in place of gold coins. No better currency has ever been created than these Treasury Notes issued under the Royal Prerogative and made legal tender for all debts. The Banks were then encouraged to furnish ample credit facilities to manufacturers and others, and it was only because of the ample supply of currency that our Industries were able to increase production during the War to such an enormous percentage over and above that of any previous year—and this in spite of the fact that we took five million men from production to form our Armies.

When military operations had ceased, there was every evidence that England would enjoy a long period of Industrial prosperity. The whole world was short of goods. Her factories, that had been devoted to the manufacture of the munitions of war, were being rapidly converted to the manufacture of the munitions of life. The men who were being disbanded from the armies were being absorbed into the various industries. The war requirements had necessitated the enlargement of practically every factory in the United Kingdom, whilst thousands of new works were constructed during the war period. As an Industrial Power, we emerged from the war much wealthier in productive facilities than when we entered it. There was every reason for believing that we should be able to regain and retain the proud position that we held in pre-War times as one of the greatest industrial powers.

But in the Spring of 1920—at the very time when manufacturers were busily preparing to meet the enormous demands for their products—which came, not only from our home markets, but especially from Overseas Dominions and foreign countries—something happened which arrested the wheels of industry. The Chancellor of the Exchequer, Mr. (now Sir) Austen Chamberlain, announced in the House of Commons that the Government had "set its heart on deflating the currency, and he called upon the Bankers to assist the Treasury in putting a stop to speculation by increasing the Bank rate and restricting loans! The effect of this was suicidal in the extreme! Had the Coalition Government at that time set out deliberately to ruin the country, they could hardly have adopted a more effective means for accomplishing their project. Everybody, except the money lending classes, was alarmed. The public began to reduce their purchases knowing that such a policy would cause a tremendous fall in prices! No one, who can avoid it, will buy goods on a falling market. This was the commencement of the terrible depression from which we have suffered for over ten years. Consider what this policy of currency deflation meant:—

(1) In the first place it meant a contraction of the currency supplies, and, therefore, of the purchasing power of the public, causing a depression in our Home Markets and a lessened demand for goods.

(2) It meant wholesale curtailment or destruction of foreign orders, for the reason that, by increasing the value of our money, foreigners would have to pay more of their currency for a pound's worth of British goods.

(3) It meant an increase in the costs of production by reason of an increase in the Bank rate.

(4) It meant the inflation of all our War debts, together with interest charges on the same.

(5) It meant an increase of taxation with lessened means of payment.

(6) It meant an era of falling prices, reduced wages, unemployment, wholesale bankruptcy, and general social misery.

And in spite of the fact that, as a result of this policy, we were forced to relinquish the Gold Standard in 1931, in order to save the country from utter ruin, not only have our Leaders, with the remedy in their hands, done nothing to relieve the situation, but we are even threatened by a return to the same monetary policy which has been the cause of our undoing.

The Gold Standard monetary system belongs to the age of scarcity, when Trade was a mere bagatelle to what it has since become. When Sir Robert Peel introduced the Bank Charter Act of 1844, England was the only country using exclusively Gold as the basis of its currency. Other nations employed Silver, although paper money was extensively used in America.

Scientific discoveries and inventions during the past half century have revolutionised the World's Economic System, and the present crisis with which the world is afflicted, is due to the attempts of the Governments and international bankers to employ an antiquated currency system to function in the present age of plenty. It is analogous, as Mr. Arthur Kitson points out in his book, to the London Water Companies trying to use the same-sized water mains employed a century ago for distributing water to London's present population.

Money is the life blood of Trade and Industry. An ample supply of money for the needs of Trade means Trade Prosperity. An insufficient supply means trade depression: and if the supply is unduly restricted, it brings about trade stagnation. In that excellent memorandum on monetary reform submitted to the Government by the London Chamber of Commerce in 1932, and which, by the way appears to have gone the way of all others advocating the abandonment of the Gold Standard monetary system, the following example is given:—

> Let us take the position of the Manufacturer under the International Gold Standard system, who, having sold 100,000 units in one year and seen his sales steadily rising as time goes on, decides that he can in the next year dispose of 150,000. He enlarges his plant accordingly, and starts to manufacture at that rate. For some political or other reason, quite remote from the needs of producers and consumers, France, or some other country, withdraws Gold, currency is contracted, prices fall, and the manufacturer has his product left on his hands, or he must sell at a loss. Alternatively, gold flows in, prices rise, and the manufacturer shows an abnormal profit. This encourages the formation of new companies to manufacture the same article, seeing so large a profit is to be earned by so doing. Gold is once more withdrawn, prices fall, and those new companies are ruined, probably dragging the original company with them.
>
> It is submitted that a monetary system which ensures equilibrium amongst nations by such methods is out of date in a scientific age.

The control of money means the control of Trade, of Industry, of Society, and indeed of Government itself! For Economic control leads directly to Political control. By putting our Country on the gold basis our politicians have made our national fortunes the sport of factors entirely beyond our own control, and at the same time deprived us of any independence of action. Our commercial and industrial activity could at any time be damped down by the withdrawal of Gold from the Bank of England on the part of any foreign interests who had a claim to it. We saw what this meant in September 1931 when such claims were being enforced. The choice before our authorities at that time, was, either to continue to part with their Gold and keep on reducing the currency accordingly, or to suspend the Law compelling the Bank to sell Gold for export, which meant the abandonment of the Gold Standard. To have adopted the first course would have plunged the whole country into immediate disaster. The abandonment of the Gold Standard not only staved off the real crisis which was emerging, but gave freedom of action to work out our own deliverance, but our authorities have so far given no sign of availing themselves of this freedom.

When we see Government officials pursuing policies injurious to the public interests—although favourable to certain private interests—does this not lend colour to the claim that is often made and which the great Benjamin Disraeli makes use of in his novel, "Coningsby": viz:—

"The world is governed by very different personages from what is imagined by those who are not behind the scenes."

And who would make bold enough to say that the statement contained in the 20th Protocol of the Learned Elders of Sion, as translated by the late Victor E. Marsden, formerly correspondent of the "Morning Post", is without significance:—

> You are aware that the Gold Standard has been the ruin of the States which adopted it, for it has not been able to satisfy the demands for money, the more so that we have removed gold from circulation as far as possible. Economic crises have been produced by us for the Gentiles by no other means than the withdrawal of money from circulation.

In Protocol No. 22 occurs the following:—

> "In our hands is the greatest power of the day—Gold".

In any case we may forgive an individual or a group of individuals who advise a policy resulting in disaster through an error of judgment. But what are we to say of those who continue to offer such advice time after time in spite of the teachings of experience as to its dangers?

There is no more potent factor for disturbing the peace and equilibrium of nations than Gold as an international medium of exchange. It sets up competition between nations to possess it, resulting in tariff barriers and international jealousies with the ever constant threat of war; and its removal from the monetary systems of the world would do more good, and be far more effective, than the most favoured results that might be expected from Disarmament Conferences.

The suppression of our Treasury Note system and the return to gold was one of the worst acts of our post-War administrations. This system which functioned so perfectly during our greatest crisis, after the gold basis currency had collapsed (as soon as the shadow of War first appeared) has been most admirably described by Dr. Wm. A. Shaw, in his well-known work entitled, **The Theory and Principles of Central Banking**, as follows:—

> Great Britain, during the years of 1915-16 discovered the true principles of State issue of paper money and benefited unspeakably by it all through the Great War. But so little did she understand what she had done, that, after thirteen years of the practice of an automatic, self-regulating issue of *full price* state paper money, she surrendered the right once more to a Monopoly Bank in 1928.....From the moment of that discovery until 1928, England afforded an illustration of the true or ideal paper money and its principles, viz. A State-issued paper money of full face value, guaranteed against debasement by the State which issued it, and incapable of debasement by the community which purchases and uses it. The Treasury Note answered this definition in every point. . . The control of the amount actually in circulation thus lay entirely in the hands of the community and was determined by the community's need for currency and its ability to pay for it. Neither the State nor the Bank of England had any control over the amount in circulation. It increased in amount when required by the expansion of industry or of prices, and it decreased in amount with their contraction. It bore all the strain of the war time by its automatic expansion, and then with the slump it automatically contracted. It was **de facto** inconvertible, and therefore had no relationship to any gold cover, and was not affected in any way by the fortunes of gold. . . . It was therefore not a source of inflation or deflation: its own movements were the consequence and effect, not the cause, of price movements.

"Here was a system", concludes Mr. Arthur Kitson in his book, "for employing the National Credit for productive purposes which belonged to the public, and could be used by the Government without any costs for interest charges; and yet our Government allowed this safest and finest currency system the world has ever known to be deliberately destroyed for the benefit of the London Bankers, and to enable the private trading company—the Bank of England—to issue its own promissory notes without any obligation on the part of the Bank to redeem them.

Not only did the Treasury Note system function satisfactorily without any gold backing or redemption promises, but these notes were far more stable than the American dollars with nearly one-half of the world's gold supplies behind them.

And if only our Governing officials had had the intelligence to employ a larger volume of these notes —instead of making their National bond issues for money which did not exist, but which was created by the Banks in the form of bank credits issued against the security of these bonds, the War could have been financed—except for goods purchased abroad—without burdening the taxpayers with ruinous interest charges. Nor would there have been necessarily any greater inflation of prices under this plan than occurred under the bond issue scheme.

And whilst the Government is searching every pocket, endeavouring to find fresh sources of revenue, they have in front of them an almost inexhaustible mine, from which to obtain enough to meet the national requirements merely by issuing fresh purchasing power and thus reviving trade and industry, reducing unemployment, and allaying the present crisis. But the mere display of the Bankers' bogey —inflation is quite sufficient to frighten our leaders to refrain from adopting the one and only remedy for our present economic troubles."

BRITISH INDIA COASTAL SAILINGS

FROM CALCUTTA TO

Rangoon Direct—Sundays, Tuesday and Fridays.
Straits *via* **Rangoon**—Fridays, also Sundays (Transhipping passengers.)
Chittagong to Akyab, Kyaukpyu, Andrew Bay & Rangoon—Every Thursday.
Chittagong to Akyab & Rangoon—Every Thursday.
Coromandel Coast, Ceylon, Tuticorin, Malabar Ports, Bombay & Karachi—Monthly.
Colombo, Tuticorin & Karachi—Monthly.
Bombay Direct—Monthly.
Straits, China & Japan—Fortnightly.
Fremantle, Adelaide, Melbourne & Sydney—Monthly with additional sailings as required.
Mauritius *via* **Colombo**—About every four or six weeks as inducement offers.

FROM CHITTAGONG TO

Akyab, Kyaukpyu, Andrew Bay and Rangoon and Chittagong to Akyab and Rangoon at regular intervals.

FROM BOMBAY TO

Karachi—Direct Thursdays with English Mails, on Wednesday *via* Verawal & Mangrole on Saturdays *via* Porttokha and Cutch Mundvie and on Mondays *via* Porebunder & Cutchmandvie.
Basra *via* **Karachi and Persian Gulf Ports**—Subsidiary Mail steamers leave on Wednesday *via* Karachi and Persian Gulf Ports and the Fast Mail on Thursdays, the latter calling at Karachi, Bushire and Mahomerah only.
Malabar Coast Ports, Tuticorin, Ceylon, Coromandel Ports & Calcutta—As inducement offers about twice a month.
Calcutta direct—Monthly.
Rangoon—As inducement offers.
East & South Africa—Fortnightly, calling at Seychelles Mozambique monthly.

FROM KARACHI TO

Bombay—Direct every Thursday with English Mails. On Tuesdays or Wednesdays *via* Mangrole & Verawal & on Tuesdays & Thursdays *via* Cutchmandvie, Port Okha and Porebunder.
Busreh—*Via* Bushire & Mahomerah only on Sundays at 10 a.m., and *via* Persian Gulf Ports on Sundays between 9 & 11 a.m.
Malabar Coast Ports, Tuticorin, Colombo, Madras & Coromandel Coast ports and Calcutta Monthly, Tuticorin Colombo & Calcutta Monthly and to Rangoon as inducement offers.
Frequent connection with the E. & A. Line steamers from Hongkong to Australia and New Zealand.

THE READING ROOM

Problems of a Socialist Government: By Sir Stafford Cripps, G. D. H. Cole and others: Gollancz: Pages 286: Price 9s.

Where constitutional socialism differs most from Marxian communism is in the latter's assumption that nothing worth doing would be possible without the establishment, necessarily by force, of the dictatorship of the Proletariat. The Bolsheviks have observed this fundamental tenet of Marxism to the letter. They have had no compunction in effecting wholesale expropriation and taking the entire possession and control of all economic activity. And they had no political obstacles to fear; for in their case, there was no room for compromise, as it was a fight to the finish, death or victory.

To the Labour party in Britain, constitutionalism has an immense practical and theoretical significance. The policy of "thorough," which was so handy to Lenin, would in their case be unthinkable. And, as constitutional battles and campaigns cannot be expected to be so decisive, the problems of the transition acquire in the practical programmes of the British Labour Party a significance, which the unconstitutional minds of other races cannot easily comprehend.

Apart from this, the Labour Party is still under the shadow of the crushing defeat of 1931. The circumstances in which that defeat was inflicted on Labour, its immediate and remoter antecedents, its aftermath, all have come to affect profoundly the plans and policies of the Party. Whether we regard it as part of a process of historical evolution or not, there is one thing which stands out in distressing prominence, that the defeat of Labour was so largely due to the defections of its leaders. Mr. Harold Laski has aptly dubbed it the "Great Betrayal." Mr. MacDonald, Mr. Thomas and Lord Snowden who, of late, has shown signs of repentence, were privy to the most astounding sabotage in history of political democracy, not to speak of economic socialism. They supplied all the paint for that elaborate camouflage, by which the most determinedly conservative and reactionary cabal was made to appear as a national government. But for the Labour leaders, who stuck to the new government, the electorate would not have so readily allowed itself to be led to the scaffold or to sign its own death-warrant.

If it is true that the treachery of the Premier had such a large place in the Labour landslide, it would still remain to explain what emboldened the Conservatives to attempt this ruse on the electorate. The explanation lies largely in the fact that the Labour Government itself had not taken its mission and its powers seriously. It had allowed the notion of a minority government to sink too deeply into its minds. One might even go so far as to say that it considered it part of its luck that its followers were in a minority in Parliament. The first Labour Government had office sprung on it as a surprise. The second was no better, so far as practical programmes in consonance with its professions were concerned. Labour was thus reduced to the position of a glorified civil service in the capitalist regime. This process of marking time had its deleterious effects on the leaders. Even those who had sprung from the lowest level of the working classes had become infected with the new notions of "respectability." They were now part and parcel of the upper ten thousand, whom they had during a lifetime learned to regard as the vanguard of their opponent's forces. Their capitulation was only completed with the events of August 1931.

The "Great Betrayal" also gave socialisst an inkling of those changes in the rules of constitutional warfare, which capitalist parties would bring about, when they have to fight with their backs to the wall. The story has been told in detail in a pamphlet of Mr. Laski's; and its significance has been discussed at length in his "Democracy in Crisis." Suffice it here that the experiences of Labour in the past point to three formidable dangers against which the Socialist Government of the future must be armed to the teeth, political torpedoing on the part of the anti-Socialist elements in the constitution, financial sabotage by the city and the banks, indecision of purpose and haziness of programme on the part of the Government itself.

To the extent that the events of 1931 have focussed attention on these grave dangers, the reverses of 1931 must be deemed a God-send and a blessing in disguise. There is happily, ample evidence now that the best and the sincerest minds on the British Labour Party are engaged in evolving the means of steering clear of the aforesaid dangers. The "Problems of a Socialist Government" is a practical attempt to save the Socialist Government from that early death or infantile paralysis which overwhelmed the MacDonald Government. It does not contain a para of theoretical discussion or a word of retort to capitalist jibes or criticisms. It is meant for socialists, who have before them the immensely onerous task of explaining to the masses at the next general election what and how the socialists, if they had the necessary sanction, would attempt and achieve for the people.

The three dangers, to which reference has been made, are in fact closely inter-related. Control over finance is part of and, in a sense, a condition precedent to, the control of industry; and no good can flow from the possession and control of industry if the Government is not clear about its immediate, and ultimate objectives and if it has not made up its mind as to the stages by which such control is to be attempted and completed. As for the opposition of the anti-socialist elements, it is bound to arise if the a labour party betrays a nervous indecision both at the polls and in office. An absolute majority in Parliament and the announcement of strong and definite lines of action after taking office would go a long way towards convincing its opponents that the days of socialism have come on them, and that their fate in the future would be no better than what overtook the supporters of absolute monarchy in the 17th or 18th century. And how could Labour expect to secure a majority in Parliament unless it makes clear to the electorate what they are determined to do? Sir Stafford Cripps in his excellent preface to the volume analyses the various factors involved and comes to the conclusion that the labour party stands to gain nothing by continuing the old policy of reassuring the conservative elements of the population that the advent of labour would not betoken radical changes in the political and economic structure of the country. His fellow writers in the volume are all of the opinion that the basic issue must be forced at the next general election and the country asked to make a definite choice between the political stalemate of the Continent with its disquieting possibilities of dictatorship and an absolute majority for the party which stands for economic equality. When the reactionary measures of the present government have had their full impact on the lives of the working classes and disillusioned them about the value of a stable pound and a balanced budget in their daily lives, and their material well-being, a definite programme of economic development, such as a socialist government alone can formulate and take on hand, would have a peculiar appeal to the people and leave them in no doubt as to the choice they should make.

If it should ultimately prove that the verdict of the people in the last elections was not due to a misdirection of the jury, but to a sincere disbelief in the efficacy of socialism, then there is, indeed, little for the Labour Party to do, except to continue for a long while the old methods of propaganda and agitation. But there is little reason to think that

the last election was decided on the merits of the issue or that since then, there has not been a serious disillusionment about the character of the National Government or a definite veering of opinion in favour of Labour. The Municipal elections and the recent by-elections are a sure index of the turn of the tide ; and the leaders of the labour party are, therefore, quite justified in assuming that, if they make a bold stand for their own principles and programmes, there is every chance of Labour being returned to the next Parliament with an absolute majority and thoroughly independent of other sections of the House.

The above analysis will show that a clear-cut programme is at once the beginning and the essence of the present task of the labour party.

Assuming that the formulation and clear exposition of a constructive economic programme persuades the people to return a Labour majority to Parliament, there would still be a number of political obstacles to be overcome before the party in power is in a position to carry through its measures. Readers of *Indian Finance* are familiar, through our review of Mr. Laski's "Democracy in Crisis," with the difficulties which would face the Labour Government in the first two months of its advent to power. Mr. Laski, it will be remembered, suggests the possibility of the Crown, the House of Lords, the Civil Service, the Army and the Navy going to the extent of over-riding the accepted principles of the British constitution in a final and desperate attempt to save capitalistic society. Even if one should discount such distressing forecasts it would still remain for the Labour Government to provide for the quick despatch of Governmental work, which in the changed outlook and objectives of a socialist regime, would acquire an immensely enhanced practical character. When the Government is out to assume control of the bank and the financial houses, to prevent the flight of capital, to control and reorganise staple industries, to initiate vast schemes and new developments, the passage of the requisite measures of legislation has necessarily to be far more expeditions than is possible in the present Parliamentary procedure. Thanks to the capitalistic governments of the past, the increasing delegation of legislative authority to the executive has paved the way for the Socialist Government in future. The Import Duties Act, for instance, has made a serious inroad into the sphere of legislation, as demarcated by the older conception of the functions of the executive and the legislature. Expedition is necessary not merely because dilatory action on the part of the socialist government would place it in greater danger of political torpedoing and economic sabotage.

All the writers in the volume under review are agreed that the most critical period in the life of the socialist government would be the first few months of office. The situation ruling at that time may well be likened to the conditions of August, 1914 and nearly the same drastic measures of governmental control would be found to be indispensable. The same Defence of the Realms Act with the identical powers for the Government to take possession of and run industry, with the difference that now it would be in the broad public interest, will have to be enacted.

The writers have attempted to deal with the main problems in the order in which they would arise. The constitutional difficulties are, as mentioned already, minimised, if the Party succeeds in securing an absolute majority. But even at this minimum they call for special efforts. The recognition of the fact that the conditions prevailing in the first few months of the Labour Government would be identical with the conditions of August, 1914 would suggest the obvious remedy that nearly the same methods must be adopted. The revival of the *DORA* has been referred to. Even in the matter of ordinary legislation, the Government will have to regard itself as an emergency government. The legislative processes will have to be short-circuited. The Acts of Parliament will have to be but a general sanction for broad objectives leaving the details of pace and method to the Government. It is not to be deduced from this that the Labour Party seek to instal a Dictatorship of a Fascist or a Communist character. At no stage of the Labour Party's career was so much insistence laid on the necessity of keeping policies and processes independent of the mere leaders. It has been suggested by almost every writer that every socialist of standing should be actively associated with the Government in the discharge of its multifarious functions.

The House of Lords, it is certain, will prove itself to be the most inconvenient obstacle to this rush of legislative action. Sir Stafford Cripps as well as his co-writers in the volume insist that the progress of socialist legislation cannot await the leisure and sweet will of their Lordships. The main legislative proposals, which seek to vest all-embracing powers in the hands of the Cabinet, will be opposed by the Lords with their permanent conservative majority. In that case, the only course left to the Government would be to recommend to the creation of new peers sufficient in number to ensure the Government a majority in their favour. A delicate question would arise, if the Crown refuses to exercise its right of nominating peers. In that case, the Party would have no alternative but to resign office or face the country again with the question of the abolition of the House of Lords.

The control of the city financiers is not less urgent or difficult than the control of the House of Lords. But recent socialist thought has nearly perfected the methods by which the flight of capital and other measures of financial sabotage could be foiled. Control of the Bank of England and the socialisation of the great joint stock banks are necessary to this end. In fact, they are as imperative as measures of defence, as they are the beginning of the control and direction of economic activity in the common interests.

The specific measures which the authors suggest for the various industries are of somewhat local interest and need not be noticed here. But some aspects of the socialist economic policy are of worldwide interest. Firstly, there is the question of how the Labour Government of the future would view the trade relations of Britain with the wider world. If

it is the traditional British free trade, in the advocacy of which Labour had stood by the Liberals solidly in the past, then the whole tangle of world economic problems would cry for solution. It is significant that the writers, especially Dr. Addison, view the problem of the extension of British agriculture, not from the theoretical standpoint of free trade versus protection but from the commonsense view of finding a use for the hands and lands that are now idle. The question whether Britain should aim at some degree of self-sufficiency in her national economy has been raised at more than one point; and though there is reluctance to profess adherence to the doctrine of self-sufficiency, no room for doubt is left that the Labour Party when it attains power, will work without any delay for that full utilisation of national resources which is the essence of economic nationalism.

It is in the sphere of foreign policy that the advent of Labour in Britain would be found to be of significance to the world. Mr. Brailsford's chapter on the subject will be found to be at once instructive and exhilarating. To let one's enthusiasm cloud one's vision or impede one's grasp of objective facts is certainly not one of Mr. Brailsford's failings. Even on the question of the Labour Government's attitude to war, he is able coldly to discuss whether the objectives of a socialist government may not be furthered better by letting two capitalist or Fascist governments to mutually weaken themselves than by a blind pursuit of peace for peace's sake. He even goes further and suggests that "an adroit Machiavellian touch might sometimes precipitate a useful war." But ultimately; pacificism gets the better of the propagandist of cosmopolitan socialism.

The vexed question of national boundaries, so heedlessly shuffled by the bunglers of Versailles, Mr. Brailsford dismisses in a remark big with wisdom. "We are more concerned to render frontiers unimportant than to redraw them". And the former, he says can be accomplished by a charter of liberties for minorities, by ensuring peace and equalising the status of workers in all lands.

And how will any Government of Great Britain be able to do it? I have always urged that a British Socialist, is apt to forget that, though he may himself be against capitalism and unearned income, he is a member of a country which in international economy is a rentier and a capitalist. If British socialists are true to their principles, they will have to persuade the nation to forego that part of its income which comes of exploitation of other peoples. I am not a little gratified to find that the authors of this volume are not terrified at applying their principles to the national economy. Mr. Brailsford is all out for reduction of the weight of international indebtedness. The writer on "Britain and the Empire" is for a wholesale repudiation of Imperialism in all its forms and manifestations. If it is remembered that the development of internal agriculture will help the Government to reduce the dependence of Britain on the invisible exports, which are really the offending part of Britain's favourable balance of payments, it will be recognised that the socialist policy will not involve such an appreciable reduction in the standard of living as may otherwise have to be apprehended.

The plans of the future Socialist Government as outlined in the volume under review are bold in the best and in the narrowest sense of the word. The Sanskrit word for "bold" *dhira*, which derivatively betokens, not courage or fearlessness, but the employment of one's faculties of observation and thought is the more apt in this context. Socialists have gained not a little from the disaster which overtook them in 1931. They have carried out a process of intense self-introspection. They have realised the danger of letting things rest on one or two leaders. They have counted the costs of political pusillanimity and are able to appraise the value of frankness and daring in their dealings with the electorate. They have perfected the plans which they would put into execution as soon as they attain power. They have left no room for doubt as to when and how the working classes may expect an improvement in their material condition as a result of the advent of a Labour Government. Above all, they have assured the world, and the subject peoples of the British Empire particularly, that Labour leaders will not lead a Jekyll and Hyde existence in Opposition and in office, but mean to apply their principles impartially to all peoples. The Book is a message of hope and peace; and as such must find an avid reading public all the world over.

THE GATEWAY OF INDIA

Bombay, Nov. 27, 1933.

The cotton mill industry continues in a state of suspense and of wistful looking forward. It is not in any great spirit of hope that the industry is awaiting future developments. The negotiations in Delhi for discovering a basis of arrangement between Japan and India have proved to be more protracted than anticipated at the outset. At one stage, it looked as though the talks were almost on the point of ending in success. Now there is less cause for optimism.

There is a vernacular saying that anything long is a snake. Curt and quick decisions on the outstanding matters of Japan with this country should have given satisfaction around and exercised a powerful psychological influence. The inevitable delay that has taken place has made the weary heart sick ; and even if any favourable outcome is ultimately announced, the news would not in the new conditions, evoke any great enthusiasm.

It is noteworthy that as against Japan, the entire mill industry of India, European and Indian, have met on common ground. Such far-flung centres as Ahmedabad and Madura, Cawnpore and Bangalore have concurred with Bombay in presenting a united front. The representatives of the cotton-growers have also, in conjunction with the mill interests, evolved proposals that would protect the agriculturists. It is, therefore, difficult to understand what Japan could have hoped to gain by this higgling.

In this matter, Bombay millowners have also received indirect but substantial sympathy from the several major and minor industries which are equally hit by Japanese competition. Truculence on the part of Japan could not pay now. The threat of boycott of Indian cotton was received with alarm at the time when it was made. The protracted deliberations have taken the edge out of this fear.

It is quite likely that owing to the heady depreciation of the dollar, and the materialisation of the threatened boycott by Japan of Indian cotton, the cotton consumers of this country would be put to great hardship and suffering. But after this recent experience of Japanese tactics, the general view is that a remedy for this situation should be found not in any artificial settlement with Japan, but in intensifying the campaign for currency depreciation.

Private reports from London indicate clearly that though the Government of India are adamant on the question of the ratio so far as the outside public is concerned, they have made strong representations to the London authorities pointing out that the question must be reconsidered in the light of the crisis that confronts the growers of wheat, cotton etc., consequent on the American development. Up to date, the matter would appear to be in the stage of exchange of cables between the authorities in India and those in England. The recent recovery of the dollar has, perhaps, been used by the Secretary of State as an argument that the problem posed by the Government of India must be solved less precipitously than suggested. There can be no doubt that the case for depreciation of the rupee is receiving, day by day, further emphasis and greater attention.

The mill industry is equally agitated and even irritated over the Mody gesture to Lancashire. Most of the representatives of the cotton mill industry that attended the Simla and Delhi consultations are in total disagreement with Mr. Mody in this matter.

Even in Bombay, there was a heated debate in the Indian Merchants Chamber Committee Meeting. Mr. Walchand Hirachand brought forward a resolution expressing disapproval of the Mody stunt. The resolution was, it must be admitted, clumsily worded and even misleading. Nevertheless, it was carried.

If Mr. Walchand had consulted other important members like Mr. Manu Subedar or Mr. A. D. Shroff or Mr. Mathradas Vissanji, the result would have been that the resolution would have expressed the condemnation in terms that would be acceptable to a preponderating majority of the Committee.

Mr. Walchand was himself out of Bombay till the day of the meeting. No consultation could take place. Nor could there be any exchange of ideas. When the resolution came before the Committee, men like Mr. A. D. Shroff and Mr. Vissanji voted against it. Mr. Manu Subedar and three others remained neutral.

However, the attitude of members like Mr. Shroff and Mr. Vissanji has given rise to considerable adverse comment. They always claimed to stand for the nationalist standpoint. Yet they voted in a way to suggest that they were approving of the action of Mr. Mody. If their disagreement was in regard to the wording of the resolution they should have moved an amendment or remained neutral.

Strong feelings have been roused and we have not yet heard the last of this episode.

It is action like that of Mr. Mody that estranges and embitters other provinces against Bombay. The general rancour against Lancashire was fostered, promoted and accentuated by Bombay which posed as a martyr at the hands of the rapacious mills of Lancashire. Without consulting the rest of the country, Bombay now signs the peace treaty with the age-old enemy. Having set up the rest of India, it was up to Mr. Mody to make sure that the rest of India was equally agreeable to conclude peace.

And in return, what is India to get from Lancashire? The cotton-growers have loomed large in the conversations with Japan. The cotton-growers were nowhere in the picture in the Lancashire arrangement. It is obvious that something has been given for nothing.

What is the special tenderness towards Lancashire due to? Everyone suspects that by this move, Bombay hopes to confirm the attitude of the Government of India and the India Office in the policy in which Japan is the common enemy of Lancashire and India.

There is a vague idea behind all this that Lancashire would give its blessings to the White Paper as a return for the generosity shown by Mr. Mody and his colleagues. Mr. Mody may be over-flowing with enthusiasm for the White Paper. But it will not satisfy any important section of the country.

When Mr. Mody canvasses next for support for the Bombay mills, neither the country nor his colleagues in the Assembly would show the same readiness and alacrity as they have been showing hitherto. Perhaps, Mr. Mody feels that the next occasion for such canvassing of support may not arise. Once Bombay and Lancashire are at one, no third party need intercede on behalf of Bombay for help from the Government.

In simple terms, Mr. Mody has thrown over-board the backing of the country and now counts on the backing of Lancashire. This may be tactically a successful move. But the growing unpopularity of Bombay millowners with the other provinces receives fresh impetus from a gesture which may placate Bombay but does inflame India.

SOUTH INDIA

(From Our Correspondent)

November 28th

The defections of the local Legislative Council in respect of the demand of the landholders for a remission of land revenue has had the effect of stimulating a wide public interest in this matter. On Tuesday last, a public meetnig was held in the Triplicane beach which unanimously passed the following resolutions:

> "This public meeting of the citizens of Madras is emphatically of opinion that the land revenue assessments on ryotwari lands in this province should be reduced by at least 33-1-3 per cent. and calls upon ryotwari landholders in this province to organise themselves and carry on agitation by all legitimate and peaceful means to achieve this object."

Mr. Satyamurthi who presided recounted the popular case for reduction of land revenue with marked ability, and good-humoured banter, which has of late come to replace the aggressive vituperation which characterised the earlier speeches of this orator. He made but a brief reference to the case for remission, which, after all, is no more and no less than the tremendous fall in agricultural prices from the level assumed in the last revenue settlement. Where Mr. Satyamurthi's powers of argument and exposition are needed is in answering the contentions of the Government. As is well known, the two stock arguments of the Government are, (1) that the landholders would not have continued to pay up the land revenue if their conditions were so grave as they are generally represented to be and, (2) that it is necessary for those, who demand the remission ,to point out ways by which the loss of revenue caused by the remission could be made up for the Government. In answering the former contention, Mr. Satyamurthi seems to have felt a little uncomfortable. The most obvious retort would, of course, be that Government virtually invite the landholders to cease paying their taxes to prove their case. On a different occasion and on a different platform, Mr. Satyamurthi would probably have set up the banner of non-payment of taxes. Here, however, when most other parties have collaborated in bringing about a public meeting, and the purpose thereof is rather to secure economic relief for the hard-pressed agriculturists than to revive a part of the old Civil Disobedience Movement, Mr. Satyamurthi had to fight shy of emphasising the obvious answer to the Government's contention.

In the second question, however, Mr. Satyamurthi was more in his element. To the Government's threat that the remission of land revenue would involve starving the nation-building departments, Mr. Satyamurthi retorts that it is better to starve the nation-building departments than to starve the nation itself. "Yes," retorts the tribune, "by all means, let these departments be starved, rather than the nation itself, for there must be some nation before we think of nation-building activities." He was anxious that the agitation in favour of remission of land revenue should be so conducted that it would not be possible for Government to say that it was engineered by politicians and that, if any untoward developments happened, it was because of "hungry men and hungrier women who could not bear the ruinous scale of taxes because of the colossal fall in prices". The parties in the Legislature, who easily shifted the responsibility of deciding this question to the Government, justly came in for a round of abuse and scorn at the hands of Mr. Satyamurthi. He pointed out that it was quite possible for the Ministry under the Devolution Rules to refuse to agree to a budget which had been provided for a reduction of land revenue. It was easy, he said, to support proposals for reduction in the legislature while not exercising the powers they had. "I have also a charge against the Legislature in regard to the grave blunders which they committed when they hastily and thoughtlessly agreed to the proposition—and the proposition was actually moved by a member of the Opposition—adjourning the resolution urging reduction in land revenue at the last meeting of the Council.

The meeting was representative of all sections of opinion and all leaders in the Presidency. Two notable absentees from the meeting were Dr. P. Subbaroyan and Mr. T. R. Venkatrama Sastriar, both of whom sent letters expressing sympathy with the objects of the meeting. Mr. Sastriar adduced the demand in the west for reduction in taxation as a means of reviving trade and improving economic prosperity as an argument for the Government of Madras conceding the popular demand. But in the letter, which Dr. Subbaroyan sent to the meeting and which was read by the President, there is noticeable a lamentable note of lukewarmness. Dr. Subbaroyan is sure that "Government realise this (that the economic depression has affected the agriculturist badly) and will do justice to the agriculturist and give him the much-needed relief." Where the ex-Chief Minister gained this reassurance of the knowledge and goodwill of the Government in regard to this question, it is not clear. Nor are the public reassured "that the Government would not do anything to make his (the agriculturist's) lot harder than it is at present as in his prosperity lies also the prosperity of the State." Reading through the letter of Dr. Subbaroyan, one cannot help feeling that that faith in the Government, which is at the root of our political ills, has also impeded the progress of the present agitation towards its legitimate fruition. The only hope to-day is that all over Madras there is keen recognition that something must be done to bring home to the Government the danger alike to themselves and the Presidency at large of ignoring the just demand of agriculturists in the present crisis. Everywhere the Land Revenue Reduction Day has been observed with a keen sense of the significance of setting apart a day for focussing popular attention on this important question.

The West Godavari Co-operative Banks Conference which was held last week is important for raising the question of the safety and stability of the Co-operative Central Banks. Mr. V. Ramdas Pantulu, in his address to the Conference, drew attention to the necessity of deciding quickly on the steps to be taken "towards securing the moneys which have got into the quagmire of rural credits." And there has since been a circular proposing the holding of a meeting of individual shareholders and depositors in Co-operative Central Banks with a view to make a decision on this important matter. While no doubt the stability of credit institutions during a period of stress and suspicion call necessarily for quick action, it is also to be considered whether the measures that might be taken to this end would not have the opposite effect. The example of American banks in the middle of the year shows clearly that too much of publicity may create a situation in which it would be increasingly difficult to handle them with confidence and firmness. Mr. K. D. Mudaliar, Acting Registrar of Co-operative Societies, has, during the week, come out with a statement on the suggestions that have been put forward since Mr. V. Ramdas Pantulu drew public attention to the question. It must be pointed out that Mr. Ramdas Pantulu himself has discountenanced the suggestion of holding a conference as likely to do greater disservice to the movement than service. Mr. Mudaliar like Mr. Pantulu recognises that all is not well with the central banks, that in most of the primary societies there has been a disquieting accumulation of bad debts. In his auditing tours all round the area, he had increasing evidence of the frozen nature of the assets of these institutions. And he also concedes that little or no effort has been made

to set right the position and reduce the elements of disquiet and instability contained therein.

But the proper line of action in a situation of this kind lies not in convening a meeting of shareholders and spreading a false alarm but in careful efforts to estimate the amount of bad debts that have to be provided for and to explore the means by which, on the one hand, the bad debts may be realised and, on the other, the volume of business may be expanded so that the incidence of these losses may be reduced to its minimum. Mr. Mudaliar draws attention to the fact that, because of the growing diffidence in the ability to employ funds in a remunerative and realisable manner, the primary societies have not drawn as freely from central banks as they used to formerly. This has brought about a contraction in the total volume of business transactions with its natural consequences on the profits of these societies. In these conditions it would be necessary in the first place, to make a thorough investigation into the volume and character of the frozen assets of co-operative banks; and efforts should be made by these institutions to increase the volume of security behind such advances wherever it may be possible. Where such increased security it not forthcoming, judicious effort should be made to make a gradual recovery of the advances. Secondly, it is necessary for the central banks to reduce the expenditure. The staff of these institutions may not allow much scope for reduction of expenditure. The more fruitful avenue of retrenchment would be the Boards of Management; and here the utmost advantage should be taken of the present difficulties to bring expenditure within economic limits. By far the most important of the measures now necessary is the increase in the volume of business. Central banks should make efforts to persuade the primary banks to increase the volume of their drawings. After all is said and done, there are seasonal payments which agriculturists have to make and which even in the worst of conditions are realisable, provided the primary societies exercise a due amount of caution and restraint on the activities of their members. If on the basis of such recognition the withdrawings of primary societies can be increased, there can be no doubt that the central banks would have increased profits, and it would be possible to provide for bad debts and restore security and confidence in the general public. This way lies the solution of the problems that are now facing the central banks of South India.

In the Indian Institute of Science at Bangalore, is reported that Mr. Modawala of the Department of Electro-Technology and Dr. Watson of the Organic Chemistry Department have resigned without mentioning any reasons. It is believed in some quarters that the latter is anxious to retire home and the former has been able to secure better prospects elsewhere. But the two professors have so impressed their students and co-workers, that attempts have been made to bring pressure on the Governing Council to persuade them to withdraw their resignations. The Governing Council, however, cannot find it easy to do so in as much as Professor Modawala and Dr. Watson have mentioned no reasons for their course of action. The students have all the same sent a lengthy memorandum to the Governing Council, in which they emphasise the progress which the Institute has made during the last 20 years, for which these professors were responsible. And the students requested the Governing Council to explore every avenue to induce the professors to continue in the Institute. It is believed that, while Dr. Watson refused to reconsider his position, Professor Modawala has been wavering. It would appear that the real reason for the two professors endeavouring to sever their connection with the Institute is that they had some misunderstandings with Sir C. V. Raman, the new Director. It is unlikely that Dr. Raman could have hurt in any way the feelings or self-respect of his colleagues. But it is possible that Dr. Raman has allowed his vigorous enthusiasm for the cause of research to induce him to a degree of interference in the other departments to which his colleagues have not been quite accustomed. If this is so, the differences should be easy of adjustment. As it is, opinion amongst those connected with the Institute would seem to be somewhat equally divided, the same emphasis being laid on the new spirit introduced by Dr. Raman as on the services done by the two professors in the past. It is up to the Governing Council to avoid this resignation, of professors, which is more regrettable for its consequences, than for itself.

Since the above was written, Sir C. V. Raman, the Director of the Institute has issued the following to the Press.

It is entirely incorrect to say that Professor H. E. Watson has resigned his appointment consequent on a difference of opinion with the authorities. Actually, he has been in this institute for over 21 years. He has not resigned, but has only applied for long leave preparatory to retirement from the services of the Institute. Professor Mowdawalla has not yet definitely decided to terminate his connection with the Institute. But if he does so it will be purely on grounds personal to himself.

In any public institution, differences of opinion are bound to occur whenever attempts are made to improve and strengthen the existing organisation and no useful purpose would be served by discussing such matters in the press. Both the Directors and the Council of the Institute have throughout been impelled by no consideration other than the welfare of the Institute and the enhancement of its public usefulness.

GREAT BRITAIN

DISARMAMENT DISCOMFITURE

Sir John Simon is given another chance to pull out the fat of British prestige from the fire of his Disarmament bungling. Opinion is gathering force that Sir John has not only failed in the matter of achievement, but is also to blame on the score of faulty tactics. If rumours are true, a majority of the Cabinet, including the Prime Minister, is of this view. So far as the Government are concerned, if the dis-appointment regarding Disarmament is keen, it is not so much for the cause of peace, as for the alarm of the Party's future, in the face of an increasingly hostile public opinion. The one concern, therefore, of the Cabinet is to exonerate itself from possible blame for the breakdown in Disarmament negotiations.

It is rather surprising that Mr. Baldwin should, in his speech at Edinburgh on November 17, declare that peace would not be secured by disarming further than the British had done. The implication of this statement is that Mr. Baldwin at any rate, is for an armed camp peace. It has been shown, last week, that the public will not be satisfied with such peace as existed in 1914, before the actual outbreak of the War.

The Labour Party motion of censure against the Government on Disarmament policy, moved on November 13, was defeated, as expected, by 409 to 54. The only sensational feature of the debate was the exchange of hostilities between Sir Stafford Cripps and Sir John Simon, the Foreign Secretary. Sir Stafford's allegation was that Britain did nothing by way of Disarmament, except the mechanisation of the Army at a cost, higher than in 1914. But, the Foreign Secretary took shelter under the excuse of prices. He emphasised that expenditure had gone down, in spite of the increase in the pay of the men in the Navy by 114 per cent. and by 62 per cent. in the Army.

The defeat of the Labour Party motion was purely technical. Men of note are worried as to the exact degree of Sir John Simon's folly in the breakdown of Disarmament negotiations. The press is getting agitated over the question. Lord Cecil set the ball of criticism rolling, by way of a letter in the *Times*, quoting Lord Hailsham, who stated that, on October 6, the German Government accepted the British plan. But, on October 10, Sir John Simon saw the German representative ; and then the rupture took place. Lord Cecil premises that some inconvenient issue must have been raised during the conversation to cause this result.

Lord Lothian has entered the lists with a letter urging that the German withdrawal was due to vital alteration in the British plan. The alteration was the substitution of a period of four years, during which a limitation, but not disarmament, by armed powers will be made for the original disarmament by stages in five years. The defect of the revised plan, according to Lord Lothian, is that during the two periods of four years each, Germany can have no re-armament of any kind, while disarmament by the armed Powers was more or less, vague. The *Times* interprets this correspondence as ruffling the national self-esteem of Germany in that, at the last moment, an untimely concession to France was made. As pointed out in these columns last week the diplomatic correspondent of *Financial News* says:

> "Constructive thought, in fact, appears to be concentrating on the possibilities of direct talks between Germany and France, in which this country would have no direct part. Nevertheless, it seems certain that Sir John Simon will shortly make one last effort to turn Europe once more towards peace, and (last but not least) *to save the prestige of himself and the National Government.*"

Having mishandled the Disarmament problem, Sir John Simon is, to all intents and purposes, all out to make a more friendly nod towards Berlin, this time. He may even go further by influencing the Cabinet to accommodate Germany on lesser questions also. The fight of the British short-term creditors with Dr. Schacht may, therefore find no support in Whitehall.

But again, as has already been indicated in these columns last week, it is only the direct pourparler of France with Germany that can bring about the solution of the Disarmament problem.

As in foreign policy, so in conflict with the Irish Free State among Empire problems, the British Government is meeting with trouble. What Sir John Simon is to world peace Mr. J. H. Thomas is to Dominion peace. In the House of Commons Mr. J. H. Thomas, Secretary of State for the Dominions, speaking on November 14, protested that the three Bills, now before the Dail conflicted, in important respects, with the Treaty of 1921, and, therefore, involved further repudiation of obligations. But, he did not make himself clear as to what action he proposed to take against Mr. De Valera's Government. In all probability, import duties against Irish goods may be increased. On the other hand, the raising of these duties is more likely to diminish revenue than increase it. Mr. De Valera's aim of creating a United Irish Republic with some form of association with the British Commonwealth in some circumstances and for some reasons Mr. Thomas declared, as totally unacceptable to His Majesty's Government. As no provocative action has yet been taken by the Free State, it is premature to find out what serious consequences await Ireland at the hands of Great Britain. A large section of public opinion on boh sides of the Irish sea, however, believes that it would be good for both Britain and Ireland to free the Free State. Under these circumstances, it is impossible to guage the exact nature of the coming reprisals.

Improved Finances

The revenue returns this year, so far, have shown a distinct improvement over those of last year for the same period:

At this time last year the excess of expenditure over revenue receipts was no less than £110,213,910, whereas for the current financial year, the deficit to date is £67,470,921, a reduction of £42,742,989.

The bulk of this reduction in excess expenditure is due to the heavy contraction of £27,200,408 in the cost of interest and management on the National Debt. Expenditure on the Supply Services is £2,400,000 less than last year.

On the other hand, ordinary revenue for the financial year to date is, at £348,099,774, over £13,600,000 greater than for the same period in the year 1932.

During the current year the estates of Earl Cadogan, Sir John Ellerman, Mr. H. Trueman Mills and Mr. Robert Fleming alone have produced an estimated duty of about £11,000,000. In the case of the estate of the late Sir John Ellerman, the death duties payable amounted to approximately £8,000,000.

Other items showing a large excess of receipts over last year are: Stamps (+£2,390,000), Customs (+£7,123,000), Miscellaneous receipts (+£6,712,000).

Incometax, however, has so far resulted in £55,883,000, compared with £58,559,000 a year ago, and Excise receipts are £10,000,000 lower than last year's figure, presumably as a result of the remission of part of the beer duty in the last Budget.

Air Mail Week

Economic Recovery

A psychological drive is being run by prominent leaders of industry in the country. Lord Melchett believes that Britain is freer from competition than at any time in the last decade and in a better position to take advantage of an unparallelled opportunity for expansion and development, both at home and abroad. But, many influences still hamper the free flow of international trade, according to Sir George MacDonough, President, Federation of British Industry. The favourable breeze of confidence, at present and for a few months more, Sir Alan G. Anderson, President, Association of British Chambers of Commerce would use to restore markets and improve trade. He warns people that a failure to seize this chance will drive the country into doldrums, again, next Spring. Economic recovery has begun in Great Britain and the Empire, and nothing but an external catastrophe can stop it, so says Sir Hugo Hirst, Chairman, General Electric Company Ld. But, Sir Francis Goodenough, Chairman, British Commercial Gas Association, warns that the old haphazard unplanned marketing will not suffice, as conditions will be more severely competitive than in the old days. The furniture trade, which is supposed to be the first to feel the effects of, and the last to recover from, a slump, has increased, by 40 per cent. Mr. Herbert E. Tailor, Secretary, the B. F. Trade Joint Committee, considers that this reflects the turn of the tide. The motor industry is meeting with increased trade everywhere abroad; and it, therefore, believes definitely to be leading the nation back to prosperity according to Mr. Leslie Walton, President of the Society of Motor Manufacturers and Traders.

It is refreshing to turn from the psychology drive to the constructive suggestion of Sir William Alexander, M.P., President, National Union of Manufacturers. He desires that the Government by consultation with the best industrial brains to formulate a national policy as to the way the great fiscal bargaining powers are to be used and as to what steps are to be taken to meet unfair foreign competition.

If only as illustrating the foundation of the buoyant feeling in business circles, it may be stated that, comparing the first nine months of 1933 with the first nine months of 1932 the steel production shows an increase of 27 per cent.

Lancashire Delegation for Trade Agreement

The Lancashire textile delegation to India announced, on November 14, that the Government of India assured that a new trade agreement, respecting cotton piecegoods and artificial silk, will be negotiated. Its official report was presented to a meeting, representing all sections of the textile industry at the Manchester Chamber of Commerce. The official report says, among other things:

> "In reference to the indeterminate character of the provisions relating to U.K. cotton and artificial silk goods in the trade agreement concluded at Ottawa, we were given the assurance that the Government of India would enter into discussions with His Majesty's Government in Great Britain on this point as soon as the negotiations then proceeding with the Japanese Government were concluded. This notable decision was conveyed to our chairman in a letter signed on behalf of the Government of India by Sir Joseph Bhore."

In this connection, the Lancashire textile mission lays stress on the necessity to urge the British Government to announce forthwith that it will send out the most competent representatives, it can appoint, to carry out the proposed new trade negotiations. In conclusion, the delegation says:

> "We consider a really satisfactory trade agreement, entered into freely, and linked to all the reciprocal concessions already existing, providing its terms were sufficiently concrete and stable, would constitute by far the best safeguard Lancashire could obtain."

It should please the Indian agriculturist to know that, already, a series of meetings had been arranged, with a view to increase the use of Indian cotton by Lancashire mills. On Thursday, a meeting was held by the special Merchant's Committee, and it will be followed within a few days by a joint meeting between that Committee and the Cotton Enquiry Committee. A couple of days later, a joint conference between the members of the Delegation the Merchant's Committee and the Indian Cotton Enquiry Committee will be held. When the question of the larger use of Indian cotton in Lancashire mills is so seriously taken up, with such alacrity, it cannot fail to produce results, happy to the welfare of the rural population in the cotton areas of India.

Treasury Bill Rate

Since the end of September when clearing banks agreed not to buy bills below a certain minimum rate, the average rate of discount at the weekly Treasury Bill tenders has risen from the low level of S 4 9.15d. to S 19 2d. last week. In the current week, the Bills were placed at S 9 0.23d. per cent. The full £45 millions were allotted. The upward movement in the rate was arrested this week, most probably with a view to stabilise these rates around the present level for at least the remainder of November. But, one section of opinion held the view that the clearing banks would increase their buying rates for three months Bills to 1 1/16 per cent. during the course of the week. This expectation did not materialise, in view of the recent reaction in giltedge values. It is, all the same, certain that banks will, before long, push the Treasury Bill rate to 1½ per cent. The only possible impediment to this consummation can be the flight of capital from gold countries to the tune of tens of millions pounds, most of which would seek investment in Treasury Bills. Treasury authorities have assumed a neutral attitude towards the efforts of clearing banks. It is, however, too much to infer from this attitude that they will go out of their way to assist the banks' efforts.

UNITED STATES OF AMERICA

OPPOSITION DISINTEGRATING

The advice, given to officials in the Administration, that they must refrain from criticism until the present policies have been workd out, can well apply also to all other critics. The justification of the advice lies in the fact that Roosevelt has found himself in the right so far and his critics in the wrong. To cavil at any phase of a monetary upset may be flattering to his critics; but, the President himself is disconcerted. After determined opposition by the Capitalist diehards, backed by the Press, it is no small credit for President to place his opponents in a position, compelling them to admit his success, however partial.

In fact, the opposition to the President's policy lacks coherence. His action is so dynamic and so shrouded in mystery that it leaves his critics, more especially the speculators, gasping for breath and groping in the dark. They are at sixes and sevens among themselves, be they agriculturists, businessmen or financiers. For instance, if there is dissatisfaction about too much of inflation, there are others who complain that there has been too little of it; similarly the relaxation of anti-trust laws is too much with some and too little with others; then again, there is anxiety regarding too great an emphasis on the interests of organised labour, as opposed to discontent with insufficient recognition of the same.

The fact, however, remains that President Roosevelt's Gold policy has success writ large on its

Air Mail Week.

face, if only because agricultural prices are higher, than when it was inaugurated. However unsatisfactory the level of the rise may be, there is no gainsaying the fact that monetary devices can lift commodity prices. If, before the end of the year, prices are raised substantially, one section of critics in the country will support President Roosevelt whole-heartedly. The chances are that agricultural prices in addition to agricultural subsidies, cannot fail to satisfy the agricultural population. When Congress meets early in January, there need be no fear of the President's programme being thoroughly overhauled or revised. Critics of Roosevelt, therefore, are in for the saddest disappointment of their lives.

Agriculturists, though the most aggressive of all the opponents of Roosevelt, will be the earliest, and the easiest, to placate. Businessmen are rather on the defensive, and evidences are not wanting that they have good reason to expect early satisfaction. The financial community, being the most uncompromising among his critics, has got so thoroughly beaten that they have developed a defeatist mentality.

President Roosevelt, however, proceeds to perfect the Recovery machinery on the one hand, and enlarge his admiring crowd on the other, while his personal prestige runs high even among his bitterest opponents of his "deal". The Church in America is a power in the land. It is but natural that it should espouse the cause of the masses of the people. For a long time now, it has been deploring the dominance of the financial community in the counsels of the State. It will not, therefore, cheaply let go the present opportunity to show Wall Street its proper place in the body politic. An inkling of this probability is afforded when the President has insisted upon full religious freedom for American Missionaries in Soviet Russia. That was a masterstroke of Mr. Roosevelt for enlisting, permanently, the sympathies of the Church in the Country's cause, as he understood it.

The exit of Mr. Woodin, the Secretary of the Treasury on indefinite leave of absence without pay, and of Mr. Dean Acheson, the under-Secretary of the Treasury on resignation and the imminent withdrawal of Dr. O. M. W. Sprague, until recently Economic Adviser of the Bank of England,—all "sound money" men—are the straws, which the financial committee is clutching at in its last moments. The President is confident of surviving the shock, however. He has appointed Mr. Henry Morgonthau, Jr., the Governor of the Farm Credit Administration, an enthusiastic disciple of Prof. Warren and a confirmed supporter of inflation, as the acting Secretary of the Treasury. This fact alone suffices to prove the Administration's consciousness of the virtue of its programme. Mr. Morgenthau's appointment has, however, coincided with the strengthening of the dollar by the stoppage of the flight of capital from the States. This event has had the effect of disarming criticism against himself for one thing, and, for another, of preventing panic among the "sound money" men.

The ban on the export of capital was sprung as a surprise. Requests for foreign remittances were refused by the Director of the Foreign Exchange Control ; brokers and dealers in foreign exchange have been informed that their clients cannot obtain remittances for the transfer of more than 10 per cent. of their capital abroad ; and the Stock Exchange was requested to order a halt to trading in the United Kingdom Fours, which touched 123 on November 16, but later dropped to 119. Alongside of these measures for preventing further exports of American funds to foreign countries, the Federal Reserve Bank began selling sterling and buying dollars.

On the same day, President Roosevelt conferred with Mr. Myron Taylor, a member of the Industrial Advisory Board and Chairman of the U. S. Steel Corporation, and Mr. J. P. Morgan. The general impression was that the dollar would be gradually lowered to a 50-cent. level by intermittant advances in R.F.C.'s buying price of gold. In this connection, the Administration is planning out the creation of a new financial institution, for the purpose of financing industry and directing the flow of credit. In all probability, this new institution will supplement the work of the R.F.C.

The last hope of the financial community was a test case before the New York Federal Court. All the orders, except one, of President Roosevelt were decided to be constitutional under the Act of Congress of March 9. But, in the case of executive order of August 28, requiring the surrender of gold by persons, not holding licenses, the flaw was purely technical. The order has to issue from the Treasury, and not from the President. The mistake will now be rectified by the Secretary of the Treasury issuing the same, soon.

But, Wall Street frets under the iron heel of President. By now, the Administration's gold policy is understood by the intelligent public as a mere gesture, a means to an end. The gradual depreciation of the dollar is the end in view. But, the President does not propose to countenance the sweeping wave of bear speculation or other wild fluctuations. Hence, he feels at liberty to raise gold prices or not ; to raise them much or little ; to prevent the export of capital or encourage it ; or to sell gold or buy it, as it suits his purpose. The financial community, under the circumstances, cannot play the autocrat of the market. Its activities are not its sweet will and pleasure ; but they are required to meet the ends of President's purpose. To play such a role is galling to Wall Street. Now, therefore, it is hugging the

thought of the resurgence of the Republican Party, as evidenced by its issue of a second pamphlet, denouncing the Administration and demanding a sound money policy, and of the imminence of the next session of the Congress which, it is wildly hoped, will apply the curb to President Roosevelt's policies.

But, there is no doubt, that the Congress can, and will, disappoint Wall Street with its other pet possibilities. The reason is simple. There is no alternative programme, yet visible on the political horizon. His opponents can criticise this act, or that, of President Roosevelt's. But as for a comprehensive programme to substitute Roosevelt's, there is none. Nor is there any sign of another dynamic personality to compare with Roosevelt's. Moreover he is riding on the crest of a wave of personal popularity. Even among his opponents, his personal prestige is very high.

To point one's finger at mid-West and the South, the corn and cotton belts, the mines of Pennsylvania or at the restive industry, is meaningless. The apparent discontent or unrest in these circles is more the outcome of allegiance to the President's programme, than an indication of sympathy with Wall Street or the Republication party. They are restive, because they stand to gain at the hands of President Roosevelt. This conviction was born of the experience of large gains, already secured. Their quarrel is with the President's pace, rather than with the direction of his Recovery drive. The coming weeks must enhance the already good record of the President, in the matter of national recovery, as the following paragraphs will show. Congress will, in all probability, augment the President's powers, than curtail and precipitate a crisis in this hour of peril.

Career of the Dollar

For the past week or two, there is less heard of a "currency war," in Wall Street. The fact of the matter is that there exists technical understanding between the Federal Reserve authorities on the one hand, and the Bank of England and the Bank of France, on the other. On the other side, of the Atlantic, secrecy was essential, lest the British and French public should jump to the conclusion that the gold policy of President Roosevelt received approval. On this side of the Atlantic, the appearance of doing things in the teeth of European opposition was a political asset of no small value. Hence, the so-called mystery of the gold programme. As for the rest, the financial community has to be kept in the dark, if the pace, and range, of the depreciation of the dollar should be under control. The surmise is strengthened by the effective secrecy, maintained for over three weeks, as regards the amounts of gold bought, sources of the purchase and the buying agents. It is widely believed that secrecy of transactions is only possible by central banks.

Admitting this premise, it follows that no danger to sterling or franc is contemplated by President's gold policy. Otherwise, the Bank of England and Bank of France would not be parties to even technical co-operation with the Federal Reserve authorities; nor would so much equanimity be noticeable in the other side of the Atlantic; nor, the utter absence of any trace of safeguarding of the sterling or the gold standard. President Roosevelt's monetary policy, by all tokens, succeeded true to specification. The dollar would have depreciated even more, but for the substantial buying from every part of the world, for the purpose of settling dollar debts at considerable discount. But, this strengthening of the dollar was offset by its weakening through heavy selling of dollar securities.

The pace of depreciation has been set. It has gathered momentum. The cessation of raising gold prices for three consecutive days was a bull point. But, during that period, dollar depreciated by leaps and bounds. The exit of the Secretaries of the Treasury was a bear point, out-distancing the bull point of stationary gold price. Besides, there are other complications. Federal Reserve authorities began selling sterling and buying dollar at one time. And yet, none concluded that the dollar would not depreciate further. Two facts emerge from the recent vicissitudes of the dollar during the week the Administration's determination to depreciate the dollar and its absolute and alert control of its fluctuations.

There is, therefore, no prospect of any retaliation, early or remote, by United Kingdom or France, unless the secretly agreed limit of depreciation of the dollar is exceeded. France must have been assured, by now, that, as the States are achieving their purpose without having to buy gold on any large scale, she will not be driven off the gold standard by American action. As for sterling, the British capitalist Press plainly recognises the unwisdom of taking the risk of buying dollars at present or of bidding up the sterling price for gold for fear of compelling France off the gold standard. The question of forbidding the sale of gold, taken from the Bank of France or from the London market, to American buyers or their agents—apart from the difficulty of it,—does not arise yet, as the States are not heavy buyers.

But, the rise in dollar prices cannot but force a fall in prices in foreign countries. As for United Kingdom, her best customer is America. If either prospers, the other shares sooner or later, Still, the coming weeks will see external opposition to the Administration's monetary policy gather round external prices and export industries. But, critics should care to remember that President Roosevelt does not propose to inflict any injury on export industries of other countries. Had he wished to do so, he would have raised wage rates, thereby increasing costs of production.

The sound money section demands a return to gold standard and annihilate State indebtedness, thus conveying a false impression that the Recovery programme will ultimately wreck on the rocks of debts. But, any fear regarding Government's credit is groundless. On November 8, money in circulation amounted to $5,673 millions. The law requires a gold coverage of at least 40 per cent. But, the gold in the Federal vaults, valued at the current price, is more than $6,000 millions. The money in circulation can, therefore, be more than doubled, without straining the Government's credit.

Balance of the total lending ability of R.F.C.	$3,400	,,
Grand Total ...	$15,135	,,

According to the current Review of the National City Bank of New York increasing numbers of companies, operating at a loss during 1932 and many preceding years back to 1929 or even before, returned to a profitable basis in the second and third quarters of this year. Trends point to more dividends, resuming or increasing dividends on common stocks, and paying up cumulative dividends that have fallen in arrears on preferred stocks. Earnings of railroads show similar improvement. Statement, issued so far by 205 industrial corporations, having an aggregate net worth of $7,443 millions show combined net profits, less deficits of $129,576,000 (or about 7% per annum) in the third quarter of this year, as against their profit of $86,878,000 in the second quarter, a net deficit of $14,831,000 in the first quarter and a deficit of $11,583,000 in the third quarter of 1932.

The series of declines in United States steel mill activity have been broken, the figure for last week being 27.1 per cent. of capacity as against 25.2 per cent. in the week previous to the last. The recent agreement, regarding the steel price has begun to bear fruit. R.F.C. has now cut the interest which it charges to railroads, from 5 to 4 per cent., on condition that the saving on interest is spent on maintenance to employment. This fact is bound to produce a further beneficial effect on steel mill activity.

The Iron and Steel Institute has announced its satisfaction with the working of the Steel Industry's Code and has asked the President to extend it beyond the test period to May 31 of next year. This request, coinciding with the first upturn in Steel mill activity for weeks, is a feather in the cap of N. R. A. Other big business will now change from defensive attitude to one of wholehearted co-operation with the Administration. The moderate increase in steel mill activity produced a particularly pleasing effect even on the financial community.

Farm unrest has been set at rest by the pacifying campaign of General Johnson and Mr. Wallace. Government began paying out $350 millions, promised to farmers who restricted production of maize and hogs, and the strike movement ended.

Cotton growers stand to gain a lot, as the Department of Agriculture hopes to reduce next year's crop to 8,800,000 bales, compared with more than 13,000,000 bales during the present season. Production curtailment on so huge a scale by nearly one-third, is conceivable only by compensatory payments in accordance with agreements. An immediate payment of $37 millions, by way of a loan to farmers, holding cotton off the market, would be offered, at the rate of 4 cents. per pound of cotton withheld. Roughly 1½ million bales of cotton may be held off the market through this inducement. The mills of the United States consumed, during October, 503,873 running bales of lint cotton compared with 499,486 in September and 501,893 in October, last year.

Government expects increased revenue from liquor taxes. Taxation on petrol and on excess profits will get some relief. The liquor revenue is to be collected through Federal licensing of distillers under N.R.A. agreements, which will also control production and imports. During the month preceding repeal of (Volstead Act) prohibition, an importation of 250,000 gallons for medicinal purposes is to be permitted.

Regarding the Deposit Insurance scheme, the First National Bank of Chicago has decided to sell

$15 millions of its Preferred stock to the R.F.C. In order to provide funds for relcaning to individual savings banks as required, the R.F.C. bought $50 millions worth of notes of the Savings Bank and Trust Company, and $100 millions of institutional securities. The release of these funds is intended to enable savings banks to pay out money freely, if necessary.

In order to evade the effects of dollar depreciation, bonds with triple options, under which interest on bonds is payable either in Ottawa, New York or London, are being insisted upon. The Union Pacific Railroad and such other companies are understood to be ready to pay interest in New York in sterling equivalent. Other companies insist on depositing their coupons abroad.

The rising price of a stock exchange seat from $95,000 to $110,000 on November 13, and $120,000 on the next day, testified to a business revival. In fact, the daily combined average, of shares dealt in the New York Stock Exchange and on the curb, of the week ended November 16, was 1,720,500, as against 1,433,333 in the previous week and 1,415,000 during the week in 1932 corresponding to the current one.

Next year's automobile production schedule is shown, by the order books of manufacturers, to be the heaviest since the first quarter of 1931. Mr. Henry Ford is still considered a truant by General Johnson. He has disagreed from the decision of the Controller-General of the N.R.A., that Mr. Ford may tender for Government contracts, and referred the matter to President Roosevelt. Mr. Ford has been invited to the White House to discuss the matter.

Out of public workshops, $1,500,000 for the construction of an experimental sea-drome, 500 miles into the Atlantic, have been appropriated. If the experiment proves a success, others would follow stretching across the ocean. The greatest contribution of N.R.A. to national recovery is the reduction of unemployment and the simultanenous raising of payrolls, thus enhancing the purchasing power of the consumer.

As a result of the N.R.A. codes, 85,000 more workers have been re-employed during October, while payrolls have increased by $70,000,000. Since its inception, the Civil Works Administration has transferred more than 1,000,000 workers from relief to work, though not all at full wage rates. By its gigantic scheme of public works, the Administration hopes to effect the transference of 4,000,000 more by February.

GERMANY

TRIUMPH OF HITLER

The recent elections in Germany were a triumph for Herr Hitler. Of the 43½ million Germans, who voted, out of a total electorate of 44 millions, 40½ millions, or over 93 per cent. declared in favour of Hitler's decision to withdraw from Geneva and to refuse to carry on disarmament discussions, except on the basis of equality. It is surprising that 2 millons, or 4¾ per cent. had the temerity to vote "no" in the Referendum, with nearly 800,000, or 2 per cent, of spoilt papers, greatly daring Goering's wrath.

In the Reichstag election, the Nazis secured about 39½ million votes, while 3 1/3 millions voted against. The strategy of the Nazi electioneering lay in mixing up the two issues of Hitler's disarmament policy and approval of the Nazi list. There was, however, no organised opposition in the election campaign. Above all, secret ballot was eliminated, which had the eminent effect of even the inmates of the Dachau concentration camp returning an almost unanimous vote for Hitler.

The elections proved more the efficiency of the Nazis to inflict moral and material ruin on those, in opposition to the Nazi dictatorship, than the real feelings of the people on the momentous questions, upon which they were asked to record their opinion. That nearly 7 per cent. representing about 3 millions of voters, should have the hardihood, irreconcilably to oppose Hitlerism, after all these months of combing-out operations, speaks volumes for the German character. The master-strategy of Nazi electioneering is, however, to stir emotions of the German people with the election slogan, "peace with equality," much in evidence on streamers all ovtr the polling places and at all other concentration points. Even outsiders can have no objection towards the desire for peace with equality, which has called forth so impressive a demonstration of German solidarity. The lessons of the elections are, therefore, not clear, as to whether the German people, as a whole, are militarist, and wholly devoted to Herr Hitler. This consolation is all, that the world public need look for, at the present moment.

Pastor Covenant

The spirit of resistance of the Germans against dictatorship was but slightly indicated in the elections. The Government cannot be supposed to have been impressed by it. General Goering will, no doubt, see to teaching the recalcitrants a lesson, as the elimination of the secret ballot should have furnished him with a complete list of them.

But, it is on the virile religious platform that the Nazis have met with the stoutest resistance, and, in the first round, got knocked out. It is not the question of the revolt of Catholics in South Germany against Prussian Protestants. Schism in the Protestant ranks has occurred, when the Nazis made known their intentions and policy through the "German Christian" faction.

The dynamic personality of Karl Barth, Professor of Theology in the University of Bonn, indomitably stood by the Bible and individual responsibility. The Professor issued, to the German-speaking Protestant world, last June, his message on the theological existence to-day, laying down his conception of the Christian's rights and duties, nay, those of the Evangelical Church in Germany, against the requirements and decrees of the new "Totalitarian State". Professor Karl Barth's declaration produced a profound effect on the minds of German readers, and in the short span of five months the *Theological Existence To-day* has already run into seven editions. The occasion for the professor's declaration was the State interference with the Ministry, or its attempts to impose the Aryan Clause upon the Church. Regarding the State doctrines, the following passage from Karl Barth's declaration is very significant.

"What I have to say on the matter is simple—I say "No", without reservation or qualification, to the letter and to the spirit of this doctrine. In my opinion, it would be better if the Evangelical Church were reduced to the smallest handful, and were to go into the catacombs rather than conclude even a distant peace with this doctrine".

The lead, so boldly given by Professor Karl Barth, has already resulted in a Covenant of Resistance by well-nigh 3,000 Evangelical pastors, who have bound themselves as a League of Opposition Clergy. The Covenant was drawn up and signed, a little while ago, at a special Synod of the German Evangelical Church held at Wittenberg, in order to resist the requirements of the new State, whenever these conflict with the exercise of a free religious conscience. It is of considerable importance to record the text of the Covenant itself.

1. I bind myself to do my duty as a servant of the World in the sole allegiance to Holy Writ and to the Confession of the Reformation as the true interpretation of Holy Writ.
2. I bind myself to protest with all my soul against any break of this profession of faith.
3. I trust in the brotherly leadership and service of Dr. Von Bodelschevingh as guardian of this profession of faith.
4. I acknowledge myself to be jointly concerned, so far as in me lies on behalf of any who are persecuted for this profession of faith.
5. Thus bound, I bear witness that the application of the "Aryan Paragraph" within the Church of Christ constitutes a breach of this profession of faith.

On November 11, the Covenanters were afforded an opportunity to prove their mettle. Three prominent leaders of the League Opposition Clergy received notice of their suspension from office by the Prussian Church Council, which controls pastorates. This Council is now in the hands of the extremists in the "German Christian" faction.

The next day was a Sunday—the polling day. Lest the three pastors should announce their suspension to their congregations on the Polling day, the Chancellory stepped in, and cancelled the suspensions. The elections were over, and the result turned the heads of extremists.

On Monday, November 13,—an ominous number in Christian supersition—the three pastors received notice of dismissal. The extremists, under their leaders, Bishop Hossenfelder and Dr. Krause, demanded, from Reich-Bishop Muller, that the Evangelical pastors should be combed out for Jewish blood, and the Aryan law rigorously applied.

On Tuesday, the three dismissed pastors saw Reich-Bishop Muller. They were supported solidly by all Evangelical pastors in the Pastors' League in Germany, which was determined to secede as a body from the German Protestant Church, if their protests were unavailing. It is to be suspected that Chancellor Hitler, or the Cabinet, has now intervened from behind the screens. For, the sequel was dramatic. Dr. Krause was dismissed. The resolution of Bishop Hossenfelder to comb out pastors for Jewish blood was denounced. The integrity of the German Evangelical Confession was reaffirmed. The dismissed pastors resumed their office, declaring that they henceforth would refuse obedience to Prussian Church authorities.

The arrival, in Berlin on Wednesday, of the representatives of all the Luthern Bishops to support the resisters, was useful for congratulating them.

As the Nazi wild men in Frontier raids, so the German Christian extremists within the Protestant Church. Neither was wanted by the Nazi hierarchy, General Goering notwithstanding.

It looks, now, as though the Hitler regime will pass from pyrotechnics to politico-economics. On the economic platform, there is bound to be two factions—one composed of Dr. Schmidt, Dr. Hugenberg, von Papen and Count Schverian Von Krasigk, who stand for little interference with industry and agriculture, except by way of subsidy. The other faction will be

led by Herr Feder, who has a strong following in the lower ranks of Nazidom, stands strongly for Government control of banking and big industries, splitting up of big estates, war on fixed-interest capital and foreign debt repudiation. The coming months should see a battle royal in the economic realm of the Reich.

FRANCE

SEARCHING OF HEARTS

The result of Nazi elections in Germany perturbed the French public, in no small degree. The old bogey has, deservedly or undeservedly, received an additional importance. The Deputies became anxious as to the developments in the near future. M. Paul-Boncour, the Foreign Secretary, replying to the debate on foreign affairs in the Chamber, did not mitigate the anxieties of Deputies. He held the view that the conception, on which the Hitler regime reposed, involved risks which cannot be ignored. But, the French Government kept the door open for any fresh concrete proposals, emanating from Germany. He was even eager to open direct negotiations, and would talk with Germany without any reserve and without any hustle. But, he made it clear that France would, however, reserve the right to consult the Powers with which she was allied by pacts, and that any agreement between Germany and France would have to be taken before the League of Nations. The temper and the attitude of Deputies, during the debate, disclosed the growing realisation, among all parties, of the imperative need for National union. Even M. Franklin Bouillon, who never had the ear of the Chamber because of his impassioned nationalistic speeches, earned the enthusiastic cheers on this occasion from almost all the groups, when he made a stirring appeal for "Union before Hitlerism."

If the German elections alarmed France, the internal political situation equally disturbed the public peace of mind. There is no sign, yet, of the budget proposals meeting with any better fate, than before. The politics of France is the victim of party interests, in spite of the imminent danger, internally and externally. The realisation of the danger has, no doubt, begun, thanks to the result of German elections, more than any other individual factor. But, the realisation has not yet gathered sufficient force to induce the Chamber to lay aside party spirit and give full support to the Government, in its drastic measures. A feat of this nature is not foreign to the French nation. The events of 1926 may be instanced. The only problem is how soon, or late, a similar achievement will be recorded by the French Chamber.

For the nonce, the budget proposals of the present Cabinet are divided into two Bills, the first dealing mainly with economics and the second with taxation. Under the first Bill, civil and military employees of the State are required to contribute 10 per cent. instead of 6 per cent. of their salaries to the pension funds, and if already retired, will have their pensions reduced by 4 per cent. Sure as anything, the Sarraut Ministry will wreck, like its predecessor, on the rock of the salary-cut proposal. Whatever the fate of the Cabinet, the first measure will reduce the budget deficit, estimated at 6,100 million francs, by approximately one-half. The balance will be got rid of by the second Bill, whose introduction depends, however, on the success of the first.

As though to help the carrying out of the budget proposals, the monetary situation is developing a bearish feature. It was expected that sterling would accompany the dollar in its downward course. But, this time sterling preferred to remain strong. This fact proved to be a bear point, in relation to the franc, especially in view of the result of the German election and the uncertainty of the internal political situation. As it was not to the interest of sterling that France should be driven off the gold standard, British authorities intervened, and somewhat steadied the franc by very heavy buying. Apart from this, there is a somewhat unsettling influence, caused by the American gold-buying policy. The French public has also begun to show some uneasiness, owing to the recent exodus of gold from the Bank of France. Moreover, the rise of bill rates in London is in itself an attraction for the flight of the franc. This attraction has been rendered all the more alluring, because of the widening of the discount on forward francs. This week's unusually heavy loss of gold will be divulged in the coming week's bank returns. Its psychological effect will be very potent on the sale of francs. With so many bear points in relation to the franc, it is only reasonable to expect some very anxious time for France to remain on the gold standard. It is to be hoped, therefore, that Deputies will compose their differences in time, and submit stoically to the financial proposals of the Government, however drastic in their nature, before it is too late.

As the foreign and monetary fronts, so is the trade front giving an anxious time. In these columns, reference has, earlier, been made to the bitter tariff war, that is still raging between France and Brazil.

Now, the British Government has taken serious objection to the 15 per cent. exchange surtax on British goods, as highly discriminatory, since it is not applied to the United States. France is also accused of treating Britain unfairly, as no British surtax was imposed on French goods during the depreciation of the franc. Britain is understood to have given notice of imposing a customs duty on all French goods, unless the surtax on British goods is removed within one month. It is also believed that the French Minister of Commerce is expected to visit London to negotiate. In influential business circles of France, the British attitude is approved, in part. While feeling keenly for an immediate applying of the surtax to the United States, the British demand for the removal should, it is held, be refused. France sets up the plea that she is struggling against a heavy trade deficit. In further justification of the levy of the surtax, it is explained that, out of a total of British imports worth 2,457 million francs, coal, representing 1,000 million francs, is exempt. Even of the balance, the whole of it will not be affected, and, in all probability, a small portion of British imports, worth about 400 million francs, will alone suffer. Regarding the charge of unfair treatment, it is pointed out that, in 1925, world prices were rising, and the French cost of living was rapidly readjusted. The same cannot apply to the conditions, prevailing in 1933.

An indirect handicap to foreign trade lurks in the new import policy of the Government. The Ministry of Agriculture will sell, as from January 1 next, trade Import Licenses for agricultural products to the highest bidder, cash down. Its extension to all industrial imports is quite possible, sooner or later. The Government will open a list, and only importers on it can obtain a license, which will be delivered to highest bidders. Payment will be made within 10 days, failing which the license will be forfeited. This new procedure substitutes the old quota system for the various imports. The main defect of the new system lies in the inevitable Red Tape, in dealing with applications for admission to the select list of importers. But, in the present state of Government finances, the new system cannot but prove beneficial, either on the score of additional revenue, if trade improves, or on the ground of favourable balance if imports diminish.

BUSINESS RECOVERY IN THE STERLING GROUP

A Survey of Conditions

It is worth while to make a rapid survey of the course of economic conditions in the principal countries in the sterling area. Such a task is difficult, for many factors have to be taken into account in judging aggregate economic changes, but we propose to attempt it in as simple terms as possible, relying largely on material obtainable in publications such as those of the League of Nations. The experience of this country is common knowledge, though we shall refer to it again at a later stage, but we propose to outline very briefly conditions in India, Australia, New Zealand, South Africa, the Scandinavian countries and Finland. To these we add Canada, though her inclusion in the sterling group is of doubtful justification, at any rate until quite recently. Yet one of the factors in the recovery of the group—whatever may be the effects on world trade as a whole—is undoubtedly the Ottawa agreements, to which Canada was a party.

It is appropriate to begin with Australia, which bore the brunt of the earliest onset of depression, expressed in a disastrous fall in commodity prices, and was one of the first to clamber laboriously out of the slough. According to the League of Nations, Australia's recovery dates from the last quarter of 1931. The re-adjustments imposed by the fall in primary commodity prices took the form of severe retrenchment in national and state expenditures, heavy increases of taxation, reductions in wages and salaries, exchange depreciation and restriction of imports. These measures contributed in varying degrees to the recuperation which began two years ago, but it is beyond doubt that Australia's task was facilitated by the depreciation of the pound sterling in terms of gold and the inauguration here of a more liberal monetary policy than could have been pursued while we remained on the gold standard. Primary commodity prices in Australia have risen substantially until in August last the index number was well above the level of a year ago and slightly higher than the average for 1931. The effect on the budget and on business conditions generally has been marked. The last financial year closed with a surplus, permitting the remission of part of the extra tax burden imposed in the years of stringency. The improvement in external trade is striking; in 1930-1 the merchandise export surplus was about £15 millions sterling, while in 1931-2, chiefly owing to drastic restriction of imports, it rose to £37½ millions sterling. In 1932-3 an excellent producing season led to a large increase in the quantity of exports, but the necessity of replenishing stocks of finished goods in Australia caused a still larger rise in imports, the export surplus being reduced to £27½ millions, a sum roughly sufficient to cover the reduced requirements of Australia's external debt service. Since last June, the end of the accounting year, the value of exports has been well above the level of a year ago, and it is estimated that the higher level of wool prices, if maintained, will increase Australia's income by £A12 millions as compared with last year. Better export prices and good harvests have been accompanied by general business recovery, expressed in a substantial decline in unemployment.

Passing on to New Zealand, a country similar in economic interests but differing in experience, the League of Nations gives the third quarter of 1932 as marking the turn in the economic situation. Indeed, conditions did not begin definitely to mend until the current year, when the position of primary producers was eased, first by the depreciation of the New Zealand pound in terms of sterling to about the same level as the Australian, and secondly by the recovery in export prices. Between January and August, 1933 the wholesale price index rose by about five per cent. mainly as the result of exchange depreciation. The improvement in the external trade position in the past two years has been conspicuous; in the year to last June exports exceeded imports by £10 millions sterling, as against £9 millions in 1931-2 and £1½ millions in 1930-1. As in Australia, this result was achieved in the earlier stages mainly by severe curtailment of imports and by an increase in the quantity of exports to counterbalance the fall in their value. In the present year the rise in the prices of New Zealand's principal products has been followed by a consistent increase in the value of exports as compared with last year. Some slight betterment is also visible in public finances, and recent revenue figures confirm the improvement. So far employment has failed to reflect the recovery in external trade, but this is said to be due to the continued stoppage of constructional work.

In South Africa we find the beginning of 1933 given as the date of emergence from the slump. It is much more than a coincidence that the turn of the year also witnessed the departure of South Africa from the gold standard and the depreciation of her currency, in exchange value, to parity with sterling. The resulting rise in the South African price of gold was followed by increased activity in gold mining and a large addition to current output. This development, whose effects radiated throughout the economic structure, was shortly followed, moreover, by a rise in the prices of South Africa's other staple products, notably wool. These changes have led to a widespread general improvement, and the sustained increase in the Government's railway traffic receipts, in spite of the summer drought, is an indication of the extent of the recovery. In the national finances, excluding the railway budget, deficits were replaced by an almost complete balance in 1932-3, while in the current financial year, thanks mainly to taxation of the gold premium, but also to a freer flow of stamp and other sources of revenue, a surplus seems almost assured. In external trade also a striking improvement has been recorded. In the four calendar years 1929 to 1932 South Africa increased her export surplus from £14 millions to £36 millions (South African pounds), but this result was achieved wholly by a drastic restriction of imports, entailing a reduction in internal consumption. In the first eight months of this year both exports and imports have increased in value, the improvement in exports being by no means confined to gold, but spread over a wide range of commodities.

In the experience of India, too, recovery dates from the suspension of the gold standard, which occurred contemporaneously with Great Britain's similar action. Thus a steady improvement has taken place over a period of two years, though the stimulus to exports was offset, as in this country, by the continuing shrinkage of world trade. On the other hand, the common experience of having to curtail imports in order to meet external obligations was obviated by the emergence of gold from Indian hoards and its export for sale abroad, in response to the inducement of high rupee prices for the metal. Thus India was enabled both to maintain her consumption of imported goods, though their value fell heavily, and to avoid undue impairment of customs receipts, an important item in the Indian budget. Moreover, the heavy sales of gold in London enabled the Government to reduce its sterling indebtedness by a large amount. This in turn strengthened India's credit in London and made possible large-scale conversion of indebtedness to lower interest rates. Partly as a result of this saving, but partly also of better internal trading conditions, the 1932-3 budget closed with a surplus, in place of preceding heavy deficits. Internally, the record of prices has been unfavourable; the wholesale index fell almost continuously until March this year, while the subsequent rise has failed to lift the index to the level of a year ago. In export trade, however, a considerable improvement has been witnessed in recent months, and for the first nine months of 1933 a substantial export surplus is recorded, as against a small deficit a year ago.

When we turn to Canada some qualifications become necessary. In the first place, Canada cannot be ranked in the monetary sense, at any rate until quite recently if even now, as a member of the sterling bloc, for the Canadian dollar has tended to fluctuate with the United States dollar rather than with the pound. Secondly, Canada is so intimately connected with the United States by trading and financial ties that she cannot fail to be closely affected by developments across her border. For these reasons Canadian business conditions have tended largely to re- therefore, to find that, according to the League Survey, flect the American experience, and it is not surprising, therefore, to find that, according to the League Survey, the improvement in Canada began in the second quarter of this year. Since then it has proceeded steadily. Wholesale prices have risen from the record low level of February until in August they were well above the average for 1932 and almost up to the level of 1931. Exports have just as consistently increased, and, whereas in the first nine months of last year they were almost exactly equivalent to imports, this year they show a considerable surplus, to some extent his must be regarded as a result of the Ottawa agreements, though it is due also in part to the improvement in primary commodity values, which is reflected in indices of internal business activity. The index number of the physical volume of business in August was 89.8, as against 68.4 in March, and 78.1 in August 1932, while unemployment has declined progressively since March. The improvement, moreover, is well spread throughout most industries; lumbering and mining have recorded marked increases in activity, iron and steel production in August attained the highest figures since 1931, while manufacturing activity as a whole is reported to be up to the level of three years ago. The improvement in the national finances has been less marked, though the deficit in 1932-3 was much less than in the previous year, and a small surplus is budgetted for in 1933-4.

Topical Extracts:

We come now to consider the situation in a group of countries outside the Empire but connected more or less closely with this country through clearly definable monetary policy. First in this group we may deal with Sweden, whose departure from the gold standard closely followed our own. Sweden's adherence to the sterling bloc is a secondary article of her monetary policy, the cardinal point in which is the maintenance or upward adjustment of internal prices. In practice, however, the krona has for some time maintained a stable relationship with sterling, at a small discount, thanks to fairly close agreement on general policy. Referring once more to the League of Nations Survey, we find that recovery in Sweden began in the third quarter of 1932; since that time its progress has been by no means uniform, though on balance a definite improvement has been recorded. Industrial production and employment have improved, particularly—and more than seasonally— since March, and are now above the level of a year ago, while export trade has enjoyed a marked revival, and the surplus of imports has declined very heavily. Figures for production and employment in individual industries, though the experience has not been similar in all, conform with the general trend. So far, however, the improvement has not produced any strong effects upon the condition of public finances.

The next country in the group is Norway, whose currency again has been maintained at a fairly steady discount in relation to sterling. Recovery here was not apparent until 1933, and its scope has so far been slight. Both wholesale and retail prices have risen since the beginning of the year, but are as yet no higher than a year ago. Internal trade improved moderately in the second and third quarters of this year, while exports show little sign of expansion. Moreover, unemployment, though it has decreased substantially this year, is still well above the level of two years ago. One direction in which an appreciable improvement has occurred is in the shipping industry, where a substantial decrease has been recorded in laid-up tonnage. Meanwhile, public finances remain in a sorely straitened condition.

Coming to Demark, again we find recovery delayed until the second quarter of 1933. At the outbreak of the world economic crisis Denmark was in a specially vulnerable position, owing to her dependence on export trade and her highly specialized interests in agricultural products. The fall in prices of primary commodities and the shrinkage in international trade thus severely affected the agricultural community. The gold standard was suspended in September 1931, but the anticipated benefits were nullified by the continued diminution in international trade, more especially by the measures taken in this country for the protection of British agriculture. The critical position of the agrarian population led to a further depreciation of the krone, in January last ,to 22½ to the pound, as against the old parity of 18 1/8, and the new quotation has thereafter been steadily maintained. Since that time the wholesale price index has moved up to a level higher than that of a year or two years ago. Butter, eggs and bacon, the staple export products, all rose commensurately, the increase being reflected in the export statistics. Unemployment has declined substantially until, in September, the lowest figure in the past two years was recorded. An improvement in the shipping industry is indicated by a fall in the total of idle tonnage to the lowest level since the spring of 1930. This quickening of activity in the economic world has been paralleled by recovery in the national finances.

We close our survey with a reference to Finland, whose currency, after being detached from gold in 1931, has been fairly steady, at moderate discounts, for long periods in terms of sterling. The date of the up-turn here is given by the League of Nations as the first quarter of this year, when a rise in wholesale prices began. The general price index, however, does not fully reflect the improvement in Finland's situation, for export prices rose strongly, while prices of imported goods recorded a slight fall. This movement has been followed recently by a large expansion in both the volume and value of exports. The increase in activity in the lumber and paper trade has been particularly marked, and is mainly responsible for a fall in the number of unemployed. The improvement in industrial conditions has been reflected in the financial position of the State; the latest available revenue returns show appreciable increases over the 1932 figures, the recovery being seen mainly in customs receipts, but also in revenue from forests and railways.

From considerations of space we make no reference to some other countries, such as British Malaya and Egypt, which, besides being within the sterling area, show more or less signs of improvement.

—*Midland Bank Review*

CIVICS AND POLITICS

By Pandit Jawaharlal Nehru

Politics to-day are in a sorry mess all over the world and distraught politicians seek in vain for a remedy. Their old methods have failed completely and events have marched ahead leaving the old guard of politicians far behind. With the passing of politics from the centre of the world's stage, economics have appeared from behind the scenes and have dominated men and events. The old style of politicians feels helpless before this transformation, but in the West, at any rate, he has been forced to bow down before the new gods and pay them homage. Not so in India where many of us still cling to outworn theories and discredited methods.

The dominance of economics has brought new ideas and new theories in its train and the problems of the world are viewed in a new perspective. Out of this welter of ideas and theories has grown the scientific interpretation of history and politics and economics that is known as scientific socialism or Marxism or communism. Many learned books have been written on this subject and passions have been roused and bitter conflicts have taken place.

There is one aspect of communism however which is easy to understand for the man in the street. Communism is in a way the municipalization of the country or the world. Of course this is a wholly insufficient definition. None the less it does give us a glimpse of what underlies communism. The true civic ideal aims at common possession and common enjoyment of municipal amenities, and these amenities go on increasing till they comprise almost everything that a citizen requires. Roads, bridges, lighting, water-supply, sanitation, hospitals and medical relief, libraries, education, parks and recreation grounds, games, proper housing, museums, art galleries, theatres, music—are some of the activities that a modern up-to-date municipality should be interested in, and some of the amenities which it should provide free of cost to all its citizens. Communism means the extension and the application of this civic ideal to the larger group of the nation and ultimately to the world. And so the civic ideal becomes the national and the international ideal, and, with the passing of pure politics, civics becomes merged in the communist ideal of a scientific ordering of the world's affairs and a proper planning and control, on behalf of and for the benefit of the masses, of production and distribution and the many other activities of the modern world.

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

OVER 86 YEARS' SERVICE IN INDIA

The STANDARD LIFE ASSURANCE COMPANY

ESTABLISHED 1825

Head Office: 3, George Street, Edinburgh.

London: 46, Queen Victoria St., E.C. 4. A, Pall Mall, S. W. 1.

HEAD OFFICE FOR INDIA:

Standrad Buildings, 32, Dalhousie Square, Calcutta.

Extracts from Directors' Report:

Report for the half-year ended 30th September, 1933.

The Revenue Account after deduction of Interest, Insurance, Commission and other expenditure, shows a profit of Rs. 2,98,289-9-1, adding the amount carried forward from last half-year Rs. 1,902-3-7, total Rs. 3,00,191-12-8. From this sum there has to be deducted:—Depreciation for the half-year Rs. 1,00,146-11, leaving an available balance of Rs. 2,00,045-1-8, which we recommend should be dealt with as follows:—To set aside for Income-tax and Super-tax with Surcharge Rs. 43,000, to be carried to Gunny in Transit Insurance Fund Rs. 10,000, for payment of Dividend on 7½ per cent. Cumulative Preference Shares at Rs. 3-12-0 per Share for the half-year ended 30th September, 1933 (free of Income-tax) Rs. 43,875, for payment of Dividend on Ordinary Shares at 4 annas per Share for the half-year ended 30th September, 1933 (free of Income-tax) Rs. 75,000, to be carried forward to next period Rs. 28,170-1-8, total Rs. 2,00,045-1-8.

The Mill is working 54 hours a week in accordance with an agreement between the non-associated Mills and the Indian Jute Mills Association.

Messrs. Abdul Satar Hajee Dawood and Abdul Whed Adamjee being out of Calcutta have not signed the Report.—Adamjee Hajee Dawood, N. Rajabally, H. Karmally, Zakaria Adamjee, Directors.

CENTRAL INDIA SPINNING, WEAVING AND MFG. CO., LD.

Synopsis of Balance Sheet:

		Cash & Deposits	1,77,535
Total ...	3,45,35,152	Total ...	3,45,35,152

Extracts from Directors' Report:

Report.—For the year ended 30th June, 1933.

As in the previous year the Company's books at Nagpur have been audited, and the stocks of Cotton, Cloth and Yarn Bales checked by one of the firms of the Company's Auditors.

It will be noticed from the Profit & Loss Account that there has been no working profit, the profit of Rs. 5,40,819-12-6 shown being due to the profit on sale of investments.

The profit during the year was Rs. 5,40,819-12-6, add—Balance brought forward from Accounts of the previous year Rs. 1,683-12-3, total Rs. 5,42,503-8-9, an *ad-interim* dividend free of Income-Tax for the half-year ended 31st December, 1932, was paid on Preference Shares at Rs. 12-8 per Share Rs. 1,25,000, on Ordinary Shares at Rs. 6 per Share Rs. 2,81,250, total Rs. 4,06,250, this leaves Rs. 1,36,253-8-9, out of this the Directors have taken to Income-tax and Super-tax Provision Account Rs. 500, and the balance left available for disposal is Rs. 1,35,753-8-9. The Directors recommend a transfer from the Equalisation of Dividend Fund to the Profit & Loss Account the sum of Rs. 2,72,000 which will make available for disposal Rs. 4,07,753-8-9.

Of this sum the Directors recommend the following distribution:—Payment of Dividend, free of Income-Tax, for the half-year ended 30th June, 1933, on Preference Shares at Rs. 12-8 per Share Rs. 1,25,000, on Ordinary Shares at Rs. 6 per Share Rs. 2,81,250, total Rs. 4,06,250, balance to be carried forward Rs. 1,503-8-9, total Rs. 4,07,753-8-9.

This year also the Directors have not been able to carry any sum to the Depreciation Fund which stands at Rs. 76,75,653-8-5.

During the accounting period cloth and yarn prices continually declined and the Mills could not therefore be worked at a profit.

The Directors have sanctioned an expenditure of Rs. 45,700 for the purchase of Dobbies, Thread Extractor and Humidifying Plant.

It is also the intention of the Directors to renovate the Mills gradually putting in new machinery in place of the existing old machines with a view to increase the production and efficiency of the Mills, and a scheme in this connection is under the consideration of the Directors.

On welfare work of the Operatives the expenditure during the year was Rs. 33,893-2-2.

The Insurance Fund has been credited with Rs. 84,126-0-3 the approximate rateable premium on uninsured risks charged to revenue as usual.

The Goods in Transit Insurance Fund has also been credited with Rs. 3,819-15-3 the approximate rateable premium of goods in transit sent uninsured.

During the year under report the system of selling cloths and yarns was altered and most of the business transacted was on the indent and forward sales system. Stocks lying at Agencies on consignment account which could not be disposed of immediately were brought back to Nagpur. As a consequence stocks at Agencies show a heavy decline. This change in the selling system has also had its reflection on the results of the working of the Mills.

At the last General Meeting a Committee of the Shareholders had been appointed to discuss with the Board questions connected with the welfare of the Company. With this Committee the Board held 4 joint Meetings and they are glad to say that the co-operation of this Committee proved helpful.—N. B. Saklatvala, (Chairman), Jehangir R. D. Tata, Tata Sons, Ld., Agents.

BIRLA JUTE MANUFACTURING CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	49,01,350	Block (net) ...	69,42,298
Debentures ...	15,00,000	Jute ...	11,50,766
Reserves ...	3,49,910	Cloth & Bags ...	1,76,681

		Cash & Invests. ...	1,36,971
Total ...	87,88,300	Total ...	87,88,300

Extracts from Directors' Report:

Report.—The Directors beg to submit the Balance Sheet and the Audited Statement of Accounts for the half-year ended 30th September, 1933, showing a profit of Rs. 5,12,909-15-1. After deducting Rs. 4,05,603-7-3 for Interest, Debenture Interest, Commission, Depreciation, etc. and making sundry adjustments there is a balance of Rs. 1,07,306-7-10 at credit of Profit and Loss Account.

The Directors recommend Dividends on 23,636 Preference Shares at 7½ per cent. per annum less Income-tax Rs. 73,631-11, the balance Rs. 33,674-12-10 to be carried forward.

In accordance with the Agreement of the Indian Jute Mills Association the Mill worked 40 hours weekly with 15 per cent. of the total complement of looms sealed, the looms so sealed being 40 inches reed space and over.—B. M. Birla, M. D. Somany, Chhajuram, Kanailall Jatia. Maganmal Kothari, Badridass Goenka, Directors. Birla Brothers, Ld., Managing Agents.

BARAREE COKE CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	12,00,000	Block (net) ...	9,25,803
Reserves ...	1,00,000	Coal & Coke, etc.	1,13,341
Debts ...	85,804	Stores ...	79,270
Profit & Loss ...	1,03,406	Outstandings ...	1,96,822
		Cash ...	1,73,974
Total ...	14,89,210	Total ...	14,89,210

Extracts from Directors' Report:

Report.—For the half-year ended 30th September, 1933.

The Profit for the half-year is Rs. 72,578-9-2 to which has to be added Rs. 72,84-1-2 brought forward from last half-year, making Rs. 1,45,420-0-4.

After providing for Depreciation Rs. 42,013-11-6 the balance for disposal is Rs. 1,03,406-4-10.

It is proposed to deal with this amount as follows:—Pay a dividend of 2½ per cent. (being at the rate of 5 per cent. per annum) Rs. 30,000, carry forward to next half-year Rs. 73,406-4-10, total Rs. 1,03,406-4-10.

Manufacture and Despatches during the half-year were as follows:—

	Manufactured.	Despatched.
Coke	Tons 24,730	Tons 34,223
Tar and Pitch ...	" 1,111	" 853
Sulphate of Ammonia	" 397	" 389
Benzol	Gallons 40,961	Gallons 41,694

As compared with the previous half-year despatches show an increase but the outlook must remain uncertain pending a more general imporovement in trade conditions.—W. T. Hunter, C. L. Phillipps, P. H. Crete, F. M. Buckland, Directors. Jardine, Skinner & Co., Managing Agents.

BISRA STONE LIME CO., LD.

Total ...	14,47,55,777	Total ...	14,47,55,777

Extracts from Directors' Report:

Report—For the year ending 30th June, 1933.

The year's operations disclose an expansion both in tonage mined and treated and in net profit earned, which, at Rs. 41,71,151, shows an increase of Rs. 12,98,605 as compared with last year.

The year opened unsatisfactorily both as regards demand and prices. The months of August and September witnessed a recovery in prices, only to be followed by a continuous decline to the end of February, during which period demand fluctuted considerably. During March both prices and demand improved, and the improvement persisted throughout the whole of the last quarter.

The substantial increase in net profit is due mainly to the expansion in demand for lead which occurred in the last quarter, when a considerable tonnage of unsold stocks, in addition to current production, was realized at prices in excess of the valuation at which it was carried in the Accounts.

It will be observed below that, whilst the average prices of silver and spelter were higher than for the preceding year, those for lead and copper, metals from which about 60 per cent. of the Corporation's revenue is derived, were considerably lower.

The total of operating and administrative expenditure, which is directly under the control of the Corporation, increased only by Rs. 2,76,606, notwithstanding an advance of 68,921 tonst of ore mined and treated. Expenditure per ton of ore mined and treated declined substantially from Rs. 32-6 to Rs. 28-4 compared with the previous year.

Freight and realization charges on 142,409 tons of products, compared with 131,638 tons for the previous year, increased by Rs. 5,23,193 or Rs. 0-8 per ton.

Production and Prices.—Production for this and the previous twelve months was:—

	Year ending 30th June, 1933.	Year ending 30th, June, 1932.
Refined Lead (tons) ...	70,560	70,560
Refined Silver (ozs.) ...	6,050,187	5,842,789
Zinc Concentrates (tons) ...	55,355	46,905
Copper Matte (tons) ...	12,050	10,349
Nickel Speiss (tons) ...	3,179½	3,012
Antimonial Lead (tons) ...	1,265	812

Average London Metal Prices.—The average London metal prices for the same periods were as follows, but in present trading conditions were not necessarily those realised by the Corporation:—

	Year ending 30th June. 1933.	Year ending 30th June, 1932.	Increase or Decrease.
Lead per ton ...	£11 11 6	£12 16 7	−£1 5 1
Silver per standard oz.	17.8224d.	17.0705d.	+.7519d.
Spelter per ton ...	£14 15 8	£12 18 9	+£1 16 11
Copper per ton ...	£35 6 11	£38 15 2	−£3 8 3

Accounts.—The Trading Account discloses a profit of Rs. 65,08,955; after deducting Lass on Exchange, Depreciation and Income Tax, the net profit carried to the Appropriation Account is Rs. 41,71,151, the net profit of Rs. 41,71,151 added to the balance brought forward from the preceeding year Rs. 17,97,465, leaves a distributable profit of Rs. 59,68,616, which has been appropriated as follows:—Dividend No. 18 Rs. 16,92,711, Dividend No. 19 Rs. 12,69,533, total Rs. 29,62,224, leaving a balance of Rs. 30,06,372 to be carried forward.

Since the close of the Accounts Dividend No. 20 of 4 annas per share, was paid on 14th October, 1933.

Investments, consisting as to 89 per cent. of British and Indian Government Securities, are shown at or under cost, their market value at 30th June, 1933, is in excess of the figure shown in the Accounts.

During the year the market value of investments appreciated considerably and afforded the opportunity of transferring to Reserve Funds the balance of the total amount of Rs. 4,38,442 appropriated during the year ending 30th June, 1931, thus restoring the position of the Reserve Funds as at 30th June, 1930.

Ore Reserves and Developments.—The estimate of Ore Reserves at 30th June, was 4,130,748 tons assaying 19.6 ozs. Ag. 25.5 per cent. Pb. 15.5 per cent. Zn. and 0.68 per cent. Cu., compared with 4,126,179 tons assaying 19.7 ozs. Ag. 25.4 per cent. Pb. 15.6 per cent. Zn. and 0.68 per cent. Cu. in the previous year.

During the year 426,696 tons of ore assaying 18.5 ozs. Ag. 21.2 per cent. Pb. 11.9 per cent. Zn. and 1.34 per cent. Cu. were extracted, against 431,265 tons added to Reserves from development work.

The whole of the ore developed was in the Meingtha Section. Development work in the Chinaman and Sham Sections continued in the unfavourable sedimentary zone.

Staff.—The improvement in the results achieved during the year reflects the greatest credit on the work of the General Manager, the Staff and employees, and the Directors express their high appreciation of the excellent services rendered in every department.—Rt. Hon. Sir Robert S. Horne, P. E. Marmion, M. L. Burnet, C. F. Clifton, John R. Govett, Capt. O. Lyttelton, A T. W. Paine, Wm. S. Robinson, Sir Henry Strakosch, Sir T. R. Wynne, Directors.

WORLD OF INDIAN FINANCE

Calcutta, December 8.

Money has been more usable during the week, call rate going up to 2½ to 3 per cent. in Calcutta and 4 per cent. in Bombay. The market is still apparently prepared to lend three months' money at 2½ per cent., as is evidenced by the last Treasury Bills auctions. We pointed out last week that, though there is everything to be said for Government crying a halt to the upward march of the yield on Treasury Bills, they might still effect a further increase during this week. It must be confessed that the increase, such as it is, is not very considerable, though the average rate of accepted tenders has again gone up from Rs. 2-7 per cent. last week to Rs. 2-8 per cent. in the one under review. The tap-rate has had a like increase from Rs. 2-6 to Rs. 2-7 per cent. And looking into the details of the sales of Treasury Bills during the week, it will be found that the total amount offered at the auction day was nearly equal to the figure of the previous week. The tenders at the lower rate of Rs. 99-6 could get no better allotment than one of 89 per cent., so that the average rate came to Rs. 2-8 per cent. For once, after nearly two months the Government have had the satisfaction of finding Treasury Bills taken up with some avidity at the tap-rate. Sales of intermediates during the period between November 29 and December 4, amounted to as much as Rs. 198.25 lakhs. It is difficult to see at what dates the sales of intermediates were effected. It would be more helpful to the student of the markets and for the compilation of our Treasury Bills statistics if the Government could see their way to give sales of intermediaes day by day instead of having them lumped together for four or five days at a time. And the omission is particularly regrettable during this week as one is at a loss to know when the phase of firmer money will set in. But from our impressions of the trend of the money market it may be inferred that the bulk of the transactions in intermediates Treasury Bills should have been effected towards the end of last month.

What is important, however, is that in spite of the market being able to find better use for money than in previous weeks, the offers of the last auctions were quite satisfactory and the Government have been able in a way to stem the tide of rising yields on Treasury Bills. But it is highly problematical whether they will be able to consolidate the ground altogether gained, not to speak of conquering more in the coming weeks. As we have said already the market is still prepared to lend three months' money at 2½ per cent. Should it, however, find a better demand for money next week, one should not be surprised to see a change in the policy of the Government regarding Treasury Bills and a readiness to improve on the rates allowed during the week under review.

Whatever the trend of Treasury Bills rates in the future, it is heartening to find that the 2½ per cent. rate for Treasuries has had a good effect on giltedge. After witnessing an almost day to day decline in the price of 3½ per cent. Paper for over a fortnight, it is refreshing to find a little steadying reaction. It is manifestly too premature to hazard any prognastications regarding the future trend of giltedge. Perhaps the most significant obstacle to recovery is the feeling, which is widespread in all countries that the world has begun to gravitate towards another war. Since the withdrawal of Germany from the Disarmament conference India has shared with the rest of the world the belief that negotiations for Disarmament and efforts for the stabilisation of world peace have neared their end and that there is among the nations of Europe a revival of what is aptly termed the war mentality. The insistence of Mr. Baldwin only last week that Britain cannot afford to continue her policy of reducing armaments has impressed the business world with the growing tension of international politics. Against such a psychological background it is difficult to set any heartening picture of the future of giltedge.

Withal the improvement in giltedge noticed in the week is undoubtedly welcome. The difficulty of counting on its continuance arises from the fact that forward sales were reported during the period of declining prices with the consequent suggestion that the present steadiness is due in the main to the necessary covering operations and not genuine invest-

ment demand. While this seems plausible, we cannot afford to overlook the increasing attention drawn by the 3½ per cent. 1947-50 loan and the 4 per cent. 1960-70 during this period. This definitely indicates that there is some genuine enquiry for investment. The drop in the short-dated scrips is another noticeable feature. Apparently it represents some selling pressure for liquifying assets. At the time of writing the tone of the market is distinctly better than it has been for some time.

The exchange market has also witnessed a growing strength and the offer of £50,000 at what has come to be believed the Government's buying rate, namely, 1s. 6 1/16d. at the last sterling auction affords a striking testimony to this. The new-found strength in the rupee-rate is, no doubt, to be attributed in part to the repeated assurances of the Finance Member regarding the ratio.

It has apparently not made any effect on the market that the supporters of the lower ratio are continuing with their fight against 18d. The voting of the Joint Select Committee of the Reserve Bank Bill on the question of the buying and selling rates of the Reserve Bank for sterling showed clearly that the end of 18d. is not yet and that, in spite of the growing volume of public opinion, and, may we add, demoralisation of the Government, the elected members of the legislature would not bring sufficient pressure to bear on the Government. But it would appear that the tactics of the supporters of the lower ratio have been changed and they would be content if the question of the ratio were left open for settlement at a later date. They propose to take Sir George Schuster at his word that the question of the ratio is not directly concerned with the Reserve Bank Bill as such, and it must leave the question of the ratio just as it is. The Opposition in the Assembly, therefore, demand that in the Reserve Bank Bill, the Legislature should be content to make a reference to the *de jure* rate at the time of the establishment of the Reserve Bank without specifying it. In as much as there is no legal sanction for the purchase of sterling at the upper point, Government would be advised to come to the Assembly again for investing the buying rate with the necessary validity of sanction and this would provide an opportunity for the Legislature to go into the question of the ratio. If, by that time, the protagonists of the lower ratio convert honest disbelievers or influence others, who have till now refrained from giving them their support, it might well be that before the Reserve Bank is established India would have effected a change in the 18d ratio.

But all that is yet in the future ; and for the present the assurances of Sir George Schuster have imparted a degree of strength to the rupee-rate. There is also the other circumstance that the pent-up stocks of gold, have strengthened exchange. The indications are that the Government will be able to buy a substantial amount of sterling during the current month. It is true that Treasury Bills maturities which aggregate Rs. 13¾ crores would not leave much balance to devote to the purchase of sterling but the better rates offered on Treasuries might succeed in attracting a great part of these funds. And it can also be for the purpose of the usual half-yearly window-dressing banks may resort to Government by sales of sterling.

The closing rates are : 1s. 6d. December T. T. ; 1s. 5 31/32d., January-February T. T., 1s. 5 15/16d., March T. T. ; 1s. 5 29/32d., April-May T. T. and 1s. 5⅞d., June-July-August T. T.

Bills may be quoted : 1s. 6⅛d., for near and 1s. 6 3/32d., January.

Money was very steady during the week. Union rate for call was quoted at ¾ per cent. One month and two month deposits quoted 1½ per cent. and three months deposits 1¾ per cent.

(*Continued from page 1407.*)

grow in the future, would not only create difficulties for national life within India but would also retard the progress of the international order for which all the world is clearly yearning to-day. Mr. Jenks suggests that attempts should be made to induce the States on the occasion of the enactment of each statute on matters of international interest to agree to the application of the Federal statutes to their territories and to surrender their right of repeal of such legislation.

It would be hardly practicable to go into the details of these suggestions. What is of more importance is the suggestion of Mr. Jenks that India is particularly fitted for pioneering in the matter of framing a national constitution within an international framework. The deprivation of constitutional validity for internationally prohibited wars is, of course, the core and centre of Mr. Jenks' thesis. But one wonders whether in assuming that the edifice of world peace will rest on the foundations of the Covenant and the Pact of Paris Mr. Jenks is not taking too much for granted. It may be that the cynicism of an unfortunate poeple visits the doings of the Powers with too uncritical a scepticism. But everything that has happened since the first proposals for the Peace pact emanated from M. Briand has tended to confirm the fear that the world has to undergo much pain and travail before it can give birth to world peace. One may readily wish, however, that if the Pact of Paris can be propped up by the legal devices suggested by Mr. Jenks and if India has it in her power to adopt this suggestion, she would not be found unwilling to make this contribution to the cause of world peace. Though obviously, the constitutional freedom of India is still trembling in the balance, it would do no small good to this country and the world if our national leaders realise from now that the realisation of our national genius lies in translating into practice the principle that the state is a realm of law, as well within the country as without.

The monetary policy of Mr. Roosevelt continues to dwell in the spotlight. But there has been an intensification of the mystery surrounding it and a growing complication of the political situation in which it is planned and from which it emerges. As our "Overseas" columns show, the resignation of Dr. Sprague and the publication of his letter, extracted elsewhere in this issue, have given the opponents of President Roosevelt's monetary policy something like a rallying point. Wall Street, which has not taken kindly to the recovery policy since its hopes of increasing prices and turnover in the stock exchange were blasted by the collapse and by the President's attitude thereto, has been enjoying a much-better press than before. The rank inflationists, on the other hand, have not refrained from causing embarassments to the President. The circumstance that large loans mature for payment in December also militate against a too rapid depreciation of the dollar and the inauguration of any seriously inflationary measures. Above all, there is the meeting of the Congress early next year, which has roused the hopes of "sound money" men and inflationists alike that they would be able to have their own policy substituted in place of the one now pursued by the President.

The immediate task of the President, therefore, may be said to be to reassure the world that the resignation of Dr. Sprague and the sporadic outbursts of the "sound money" men would make no difference to the plans which he would follow and that, if any changes are made therein, it would solely be because of the President's conviction of the need therefor. Secondly, it would be the natural aim of Mr. Roosevelt to secure an appreciable rise in commodity prices, such as would silence impatient criticism in Congress and secure for himself a free hand for the policy of open mind and fearless measures.

Meanwhile, it is significant that the Roosevelt policy is receiving encomiums from various quarters, some of them somewhat unexpected. It is reported that Sir William Beveridge, Director of the London School of Economics, who has recently returned to London from a tour of investigation in America, expressed the opinion that "the agricultural programme was an attempt by competent and determined officials under a strong minister to carry out economic planning on a scale hitherto untried outside Russia." Though he referred to the fact that increases in wages by mort than 200 per cent. were not unknown and that he knew of one company, which was losing at the rate of 30 million dollars yearly last March, and which had added 24 million dollars a year to its cost, under the code, he confessed that his two main impressions were the badness of the economic crash and the fact that the Americans were treating the national emergency as if it were a war. So long as people were still helping the Government in spite of a growing tendency to criticise, one might be sure that the attempts of sabotageurs, whether they are inspired by honest differences of opinion with the President or by less worthy motives, would be foiled and the President would be able to give his own ideas of stimulating recovery a fair chance.

Mr. Bingham, the American Ambassador at London gave a similar tribute in his speech at the Thanks-giving Day Dinner of the American Society in London. .Mr. Bingham pointed out that the United States had "reason for profound thanksgiving at the present juncture." From a state in which industry was paralysed, the banking system prostrated and was on the brink of despair, the nation had been saved and paralysing fear had been replaced by hope and courage. Every index showed substantial progress towards a return of normal prosperity." The most significant observation was that there would be sadness ahead for those who sold United States bonds short.

It is Sir Basil Blackett, however, who has ranged himself more unreservedly on the side of President Roosevelt. According to a cable appearing in the *"Statesman"* Sir Basil Blackett said in an address to the Rotarians at Kaula Lumpur that, "unless President Roosevelt's policy succeeded to a considerable degree, I think the world will suffer very badly from the breakdown that will occur in America. Unless we can get away from competitive depreciation of currencies and get something like co-operative action, I do not think we are going to reach that time of prosperity which is undoubtedly due to us."

The condition precedent to any such co-operative action would be a further clarification of the exact objectives and methods of President Roosevelt. So far the disturbances in the local political atmosphere have obliged President Roosevelt to mystify his critics and his opponents by refusing to divulge his further plans and steps. Some time ago, it was announced that at a meeting with the sound money leaders President Roosevelt definitely refused to make clear his plans. And now the opinion is entertained amongst certain sections of the London City that the lack of relation between the gold price and the exchange rates in the United States points to the possibility that President Roosevelt is playing a much subtler game than his critics are prepared to grant. If the present dislocation between gold price and exchange rates and the unevenness of the rise in the dollar price constitute a madness, there is also a method in the madness. It has one advantage that of mystifying the people who are only too anxious to defeat the President's plans and making it impossible for them to make any countermoves.

It may be asked how long this game of hide-and-seek can continue. To this, there can be no definite answer ; but it is encouraging sign that a paper like the *Daily Telegraph* of London believes that very soon President Roosevelt would be in a position to make clear his aims and objectives. That the President would be naturally anxious to face the Congress with a definite programme is another argument in favour of accepting the *Daily Telegraph's* reading of the situation. For the present, one can take comfort, if one is so disposed, from the fact that the official price of gold in America has been steady at the rate of 34.01 for the last five days and that, so far as the sterling group is concerned, the dollar has had a recovery and the increase in the sterling Franc rate has abated, the rate came down to as low as 83.28 as against 84.50 at the beginning of the week.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

BUY

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 89/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 3¾ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 2 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3 per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 3½ per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.
